

# Contents

Preface	ix
What this book is about	ix
Highlights of Part I	xi
Acknowledgments	xiii
Contents of Part I of Volume Two	xvii
Chapter 1. Ricci Solitons	1
1. General solitons and their canonical forms	2
2. Differentiating the soliton equation — local and global analysis	6
3. Warped products and 2-dimensional solitons	11
4. Constructing the Bryant steady soliton	17
5. Rotationally symmetric expanding solitons	26
6. Homogeneous expanding solitons	32
7. When breathers and solitons are Einstein	41
8. Perelman’s energy and entropy in relation to Ricci solitons	44
9. Buscher duality transformation of warped product solitons	46
10. Summary of results and open problems on Ricci solitons	50
11. Notes and commentary	52
Chapter 2. Kähler–Ricci Flow and Kähler–Ricci Solitons	55
1. Introduction to Kähler manifolds	55
2. Connection, curvature, and covariant differentiation	62
3. Existence of Kähler–Einstein metrics	70
4. Introduction to the Kähler–Ricci flow	74
5. Existence and convergence of the Kähler–Ricci flow	80
6. Survey of some results for the Kähler–Ricci flow	95
7. Examples of Kähler–Ricci solitons	97
8. Kähler–Ricci flow with nonnegative bisectional curvature	103
9. Matrix differential Harnack estimate for the Kähler–Ricci flow	109
10. Linear and interpolated differential Harnack estimates	118
11. Notes and commentary	124
Chapter 3. The Compactness Theorem for Ricci Flow	127
1. Introduction and statements of the compactness theorems	127
2. Convergence at all times from convergence at one time	132
3. Extensions of Hamilton’s compactness theorem	138

4. Applications of Hamilton's compactness theorem	142
5. Notes and commentary	148
Chapter 4. Proof of the Compactness Theorem	149
1. Outline of the proof	149
2. Approximate isometries, compactness of maps, and direct limits	150
3. Construction of good coverings by balls	158
4. The limit manifold $(\mathcal{M}_\infty^n, g_\infty)$	165
5. Center of mass and nonlinear averages	175
6. Notes and commentary	187
Chapter 5. Energy, Monotonicity, and Breathers	189
1. Energy, its first variation, and the gradient flow	190
2. Monotonicity of energy for the Ricci flow	197
3. Steady and expanding breather solutions revisited	203
4. Classical entropy and Perelman's energy	214
5. Notes and commentary	219
Chapter 6. Entropy and No Local Collapsing	221
1. The entropy functional $\mathcal{W}$ and its monotonicity	221
2. The functionals $\mu$ and $\nu$	235
3. Shrinking breathers are shrinking gradient Ricci solitons	242
4. Logarithmic Sobolev inequality	246
5. No finite time local collapsing: A proof of Hamilton's little loop conjecture	251
6. Improved version of no local collapsing and diameter control	264
7. Some further calculations related to $\mathcal{F}$ and $\mathcal{W}$	273
8. Notes and commentary	284
Chapter 7. The Reduced Distance	285
1. The $\mathcal{L}$ -length and distance for a static metric	286
2. The $\mathcal{L}$ -length and the $L$ -distance	288
3. The first variation of $\mathcal{L}$ -length and existence of $\mathcal{L}$ -geodesics	296
4. The gradient and time-derivative of the $L$ -distance function	306
5. The second variation formula for $\mathcal{L}$ and the Hessian of $L$	312
6. Equations and inequalities satisfied by $L$ and $\ell$	322
7. The $\ell$ -function on Einstein solutions and Ricci solitons	335
8. $\mathcal{L}$ -Jacobi fields and the $\mathcal{L}$ -exponential map	345
9. Weak solution formulation	363
10. Notes and commentary	379
Chapter 8. Applications of the Reduced Distance	381
1. Reduced volume of a static metric	381
2. Reduced volume for Ricci flow	386
3. A weakened no local collapsing theorem via the monotonicity of the reduced volume	399
4. Backward limit of ancient $\kappa$ -solution is a shrinker	406

5. Perelman's Riemannian formalism in potentially infinite dimensions	417
6. Notes and commentary	432
Chapter 9. Basic Topology of 3-Manifolds	433
1. Essential 2-spheres and irreducible 3-manifolds	433
2. Incompressible surfaces and the geometrization conjecture	435
3. Decomposition theorems and the Ricci flow	439
4. Notes and commentary	442
Appendix A. Basic Ricci Flow Theory	445
1. Riemannian geometry	445
2. Basic Ricci flow	456
3. Basic singularity theory for Ricci flow	465
4. More Ricci flow theory and ancient solutions	470
5. Classical singularity theory	474
Appendix B. Other Aspects of Ricci Flow and Related Flows	477
1. Convergence to Ricci solitons	477
2. The mean curvature flow	482
3. The cross curvature flow	490
4. Notes and commentary	500
Appendix C. Glossary	501
Bibliography	513
Index	531
