	<i>Foreword</i>	ix
	<i>Preface</i>	xi
PART I	DESCRIPTION AND SPECIFICATION	1
	<i>David Lorge Parnas, P.Eng</i>	
1	Introduction <i>John McLean</i>	7
	Using Assertions About Traces to Write Abstract Specifications for Software Modules	9
	<i>Wolfram Bartussek and David L. Parnas</i>	
	1.1 Introduction	9
	1.2 A Formal Notation for Specification Based on Traces	12
	1.3 Some Simple Examples	15
	1.4 Discussion of the Simple Examples	17
	1.5 A Compressed History of the Development of an Abstract Specification	19
	1.6 Conclusions	26
2	Introduction <i>William Wadge</i>	29
	Less Restrictive Constructs for Structured Programs	31
	<i>David L. Parnas and William Wadge</i>	
	2.1 Abstract	31
	2.2 Introduction	31
	2.3 The State of a Computing Machine	32
	2.4 Programs	32
	2.5 Program Specifications	32
	2.6 Primitive Programs	33
	2.7 Control Constructs and Constructed Programs	34
	2.8 Defining the Semantics of Constructed Programs	34
	2.9 The Value of a Program	34
	2.10 The Syntax of the Constructs	34
	2.11 Notation	35
	2.12 Guard Semantics	35
	2.13 The Semantics of a Limited Component	36
	2.14 The Semantics of Limited Component Lists	36
	2.15 The Semantics of “;”	36
	2.16 The Semantics of “stop”, “go” and “init”	36

2.17	Semantics of the Iterative Construct (<i>it ti</i>)	37
2.18	The Semantics of Parentheses	38
2.19	The Value of “#”	38
2.20	The Value Stack	39
2.21	Exits and Entrances	39
2.22	A Very Simple Example Done Three Ways	40
2.23	The DEED Problem	41
2.24	Conclusions	42
3	Introduction <i>Martin van Emden</i>	49
	Predicate Logic for Software Engineering	51
	<i>David Lorge Parnas</i>	
3.1	Abstract	51
3.2	Introduction	51
3.3	The Structure of This Paper	52
3.4	Comparison with Other Work	53
3.5	Basic Definitions	55
3.6	The Syntax of Logical Expressions	57
3.7	The Meaning of Logical Expressions	58
3.8	Examples of the Use of This Logic in Software Documentation	60
3.9	Conclusions	63
4	Introduction <i>Joanne Atlee</i>	67
	Tabular Representations in Relational Documents	71
	<i>Ryszard Janicki, David Lorge Parnas, Jeffery Zucker</i>	
4.1	Abstract	71
4.2	A Relational Model of Documentation	71
4.3	Industrial Experience with Relational Documentation	73
4.4	Why Use Tabular Representations of Relations?	75
4.5	Formalisation of a Wide Class of Tables	77
4.6	Transformations of Tables of One Kind to Another	82
4.7	Conclusions	85
5	Introduction <i>Ali Mili</i>	89
	Precise Description and Specification of Software	93
	<i>D.L. Parnas</i>	
5.1	Abstract	93
5.2	On Foundational Research	93
5.3	Language Is Not the Issue	94
5.4	A Polemic About Four Words	95
5.5	Four Types of Software Products	97
5.6	Programs and Executions	98
5.7	A Mathematical Interlude: LD-Relations	99
5.8	Program Construction Tools	99
5.9	Describing Programs	100

5.10	Specifying Programs	102
5.11	Objects Versus Programs	104
5.12	Descriptions and Specifications of Objects	104
5.13	Conclusions	105

6 Introduction *Kathryn Heninger Britton* 107

**Specifying Software Requirements for Complex Systems:
New Techniques and Their Application** 111

Kathryn L. Heninger

6.1	Abstract	111
6.2	Introduction	111
6.3	A-7 Program Characteristics	112
6.4	Requirements Document Objectives	113
6.5	Requirements Document Design Principles	114
6.6	Techniques for Describing Hardware Interfaces	116
6.7	Techniques For Describing Software Functions	121
6.8	Techniques for Specifying Undesired Events	130
6.9	Techniques for Characterizing Types of Changes	131
6.10	Discussion	131
6.11	Conclusions	132

PART II SOFTWARE DESIGN 137

David Lorge Parnas, P.Eng

7 Introduction *David M. Weiss* 143

**On the Criteria to Be Used in Decomposing Systems
into Modules** 145

D.L. Parnas

7.1	Abstract	145
7.2	Introduction	145
7.3	A Brief Status Report	146
7.4	Expected Benefits of Modular Programming	146
7.5	What Is Modularization?	146
7.6	Example System 1: A KWIC Index Production System	146
7.7	Hierarchical Structure	153
7.8	Conclusions	154

8 Introduction *Paul C. Clements* 157

On a “Buzzword”: Hierarchical Structure 161

David Parnas

8.1	Abstract	161
8.2	Introduction	161
8.3	General Properties of All Uses of the Phrase “Hierarchical Structure”	161
8.4	Summary	168

9	Introduction <i>Daniel Siewiorek</i>	171
	Use of the Concept of Transparency in the Design of Hierarchically Structured Systems	173
	<i>D.L. Parnas and D.P. Siewiorek</i>	
	9.1 Abstract	173
	9.2 Introduction	173
	9.3 The "Top Down" or "Outside In" Approach	173
	9.4 "Transparency" of an Abstraction	175
	9.5 Preliminary Example	175
	9.6 "Register" for Markov Algorithm Machine	178
	9.7 A Hardware Example	182
	9.8 An Unsolved Transparency Problem from the Operating System Area	186
	9.9 "Suggestive Transparency"	188
	9.10 "Misleading Transparency"	188
	9.11 Outside In and Bottom Up Procedures in Combination	189
10	Introduction <i>Ralph Johnson</i>	191
	On the Design and Development of Program Families	193
	<i>David L. Parnas</i>	
	10.1 Abstract	193
	10.2 Introduction	193
	10.3 Motivation for Interest in Families	194
	10.4 Classical Method of Producing Program Families	194
	10.5 New Techniques	196
	10.6 Representing the Intermediate Stages	197
	10.7 Programming by Stepwise Refinement	198
	10.8 Technique of Module Specification	200
	10.9 Comparison Based on the KWIC Example	201
	10.10 Comparative Remarks Based on Dijkstra's Prime Program	202
	10.11 Comparative Remarks Based on an Operating System Problem	202
	10.12 Design Decisions in Stage 1	204
	10.13 Stage 3	205
	10.14 How the Module Specifications Define a Family	208
	10.15 Which Method to Use	209
	10.16 Relation of the Question of Program Families to Program Generators	210
	10.17 Conclusions	210
	10.18 Historical Note	211
11	Introduction <i>John Shore</i>	215
	Abstract Types Defined as Classes of Variables	217
	<i>D.L. Parnas, J.E. Shore, and D.M. Weiss</i>	
	11.1 Introduction	217
	11.2 Previous Approaches	217
	11.3 Motivations for Type Extensions	218

	11.4 A New Approach	220
	11.5 Applying These Concepts to Designing a Language	226
12	Introduction <i>Stuart Faulk</i>	229
	Response to Undesired Events in Software Systems	231
	<i>D.L. Parnas and H. Würges</i>	
	12.1 Abstract	231
	12.2 Introduction	231
	12.3 Difficulties Introduced by a “Leveled Structure”	233
	12.4 The Effect of Undesired Events on Code Complexity	233
	12.5 Impossible Abstractions	234
	12.6 Error Types and Direction of Propagation	235
	12.7 Continuation After UE “Handling”	236
	12.8 Specifying the Error Indications	237
	12.9 Redundancy and Efficiency	240
	12.10 Degrees of Undesired Events	241
	12.11 Examples	244
	12.12 Conclusions	244
	Appendix 12.A Annotated Example of Module Design in Light of Errors	247
13	Introduction <i>James Horning</i>	255
	Some Software Engineering Principles	257
	<i>David L. Parnas</i>	
	13.1 Abstract	257
	13.2 Introduction	257
	13.3 What Is a Well-Structured Program?	258
	13.4 What Is a Module?	259
	13.5 Two Techniques for Controlling the Structure of Systems Programs	260
	13.6 Results	261
	13.7 Error Handling	262
	13.8 Hierarchical Structure and Subsetable Systems	263
	13.9 Designing Abstract Interfaces	263
	13.10 Conclusions	264
14	Introduction <i>Barry Boehm</i>	267
	Designing Software for Ease of Extension and Contraction	269
	<i>David L. Parnas</i>	
	14.1 Abstract	269
	14.2 Introduction	269
	14.3 Software as a Family of Programs	270
	14.4 How Does the Lack of Subsets and Extensions Manifest Itself?	271
	14.5 Steps Toward a Better Structure	273
	14.6 Example: An Address-Processing Subsystem	279

	14.7 Some Remarks on Operating Systems: Why Generals Are Superior to Colonels	286
	14.8 Summation	286
15	Introduction <i>James Waldo</i>	291
	A Procedure for Designing Abstract Interfaces for Device Interface Modules	295
	<i>Kathryn Heninger Britton, R. Alan Parker, David L. Parnas</i>	
	15.1 Abstract	295
	15.2 Introduction	295
	15.3 Objectives	296
	15.4 Definitions	299
	15.5 Design Approach	301
	15.6 Design Problems	307
	15.7 Summary	313
16	Introduction <i>David M. Weiss</i>	315
	The Modular Structure of Complex Systems	319
	<i>D.L. Parnas, P.C. Clements, and D.M. Weiss</i>	
	16.1 Abstract	319
	16.2 Introduction	319
	16.3 Background and Guiding Principles	321
	16.4 A-7E Module Structure	325
	16.5 Conclusions	335
17	Introduction <i>Kathryn Heninger Britton</i>	337
	Active Design Reviews: Principles and Practices	339
	<i>David L. Parnas and David M. Weiss</i>	
	17.1 Abstract	339
	17.2 Introduction	339
	17.3 Objectives of Design Reviews	340
	17.4 Conventional Design Reviews	341
	17.5 A More Effective Review Process	343
	17.6 Conclusions	350
18	Introduction <i>Barry Boehm</i>	353
	A Rational Design Process: How and Why to Fake It	355
	<i>David Lorge Parnas and Paul C. Clements</i>	
	18.1 Abstract	355
	18.2 The Search for the Philosopher's Stone: Why Do We Want a Rational Design Process?	355
	18.3 Why Will a Software Design "Process" Always Be an Idealization?	356
	18.4 Why Is a Description of a Rational Idealized Process Useful Nonetheless?	357

18.5	What Should the Description of the Development Process Tell Us?	358
18.6	What Is the Rational Design Process?	358
18.7	What Is the Role of Documentation in This Process?	364
18.8	Faking the Ideal Process	366
18.9	Conclusion	367
19	Introduction <i>A. John van Schouwen</i>	369
	Inspection of Safety-Critical Software Using Program-Function Tables	371
	<i>David Lorge Parnas</i>	
19.1	Abstract	371
19.2	Introduction	371
19.3	Safety-Critical Software in the Darlington Nuclear Power Generating Station	373
19.4	Why Is Software Inspection Difficult?	374
19.5	Functional Documentation	375
19.6	Program-Function Tables	376
19.7	The Inspection Process	378
19.8	Hazard Analysis Using Functional Documentation	380
19.9	Conclusions	380
PART III	CONCURRENCY AND SCHEDULING	383
	<i>David Lorge Parnas, P.Eng</i>	
20	Introduction <i>Pierre-Jacques Courtois</i>	387
	Concurrent Control with “Readers” and “Writers”	389
	<i>P.J. Courtois, F. Heymans, and D.L. Parnas</i>	
20.1	Abstract	389
20.2	Introduction	389
20.3	Problem 1	389
20.4	Problem 2	390
20.5	Final Remarks	391
21	Introduction <i>Stuart Faulk</i>	393
	On a Solution to the Cigarette Smoker’s Problem (without conditional statements)	395
	<i>D.L. Parnas</i>	
21.1	Abstract	395
21.2	Introduction	395
21.3	Comments	397
21.4	On Patil’s Proof	397
21.5	Patil’s Result	397
21.6	On a Complication Arising from the Introduction of Semaphore Arrays	398

	21.7 On the Yet Unsolved Problem	398
	21.8 On More Powerful Primitives	399
22	Introduction <i>Stuart Faulk</i>	403
	On Synchronization in Hard-Real-Time Systems <i>Stuart R. Faulk and David L. Parnas</i>	407
	22.1 Abstract	407
	22.2 Introduction	407
	22.3 The Need for a Separation of Concerns	408
	22.4 A Two-Level Approach to Synchronization	410
	22.5 Considerations at the Lower Level	410
	22.6 The Lower-Level Synchronization Primitives	411
	22.7 Considerations at the Upper Level	413
	22.8 The STE Synchronization Mechanisms	418
	22.9 Implementation in Terms of the Lower-Level Mechanism	426
	22.10 The Pre-Run-Time Scheduler	428
	22.11 Why Another Synchronization Mechanism?	430
	22.12 Experience and Results	430
	22.13 Summary	432
23	Introduction <i>Aloysius Mok</i>	437
	Scheduling Processes with Release Times, Deadlines, Precedence, and Exclusion Relations <i>Jia Xu and David Lorge Parnas</i>	439
	23.1 Abstract	439
	23.2 Introduction	439
	23.3 Overview of the Algorithm	442
	23.4 Notation and Definitions	444
	23.5 How to Improve on a Valid Initial Solution	447
	23.6 Searching for an Optimal or Feasible Solution	449
	23.7 Empirical Behavior of the Algorithm	451
	23.8 Conclusions	452
	Appendix 23.A An Implementation of the Procedure for Computing a Valid Initial Solution	455
	Appendix 23.B An Implementation of the Main Algorithm	457
	Appendix 23.C Examples 1-5	460
PART IV	COMMENTARY	467
	<i>David Lorge Parnas, P.Eng</i>	
24	Introduction <i>James Horning</i>	471
	Building Reliable Software in BLOWHARD <i>David L. Parnas</i>	473
	24.1 Introduction	473
	24.2 On "Building In"	473

24.3	Four Views of a Programming Language	474
24.4	Resolving Conflicts of Viewpoint in the Design of BLOWHARD	474
24.5	What Is BLOWHARD?	475
24.6	Why This Farce?	475
25	Introduction <i>John Shore</i>	477
	The Impact of Money-Free Computer Assisted Barter Systems	479
	<i>David L. Parnas</i>	
25.1	Introduction	479
25.2	Money Versus Barter as a Mechanism for Exchanging Our Current Goods and Services	480
25.3	Money Versus Barter for Future Sales?	484
25.4	What Would Barter Mean for Foreign Trade?	486
25.5	Are CABS a Dream or Are They Current Technology?	487
25.6	Turning Theory into Practice	488
25.7	What Would Be the Net Effect of the Use of CABS?	490
25.8	Can a Materialistic, "Rational", System Be Humane?	490
25.9	CABS and the Moral Illnesses in the Bishop's Report	491
26	Introduction <i>David M. Weiss</i>	493
	Software Aspects of Strategic Defense Systems	497
	<i>David Lorge Parnas</i>	
26.1	Abstract	497
26.2	Introduction	497
26.3	Why Software Is Unreliable	499
26.4	Why the SDI Software System Will Be Untrustworthy	501
26.5	Why Conventional Software Development Does Not Produce Reliable Programs	504
26.6	The Limits of Software Engineering Methods	506
26.7	Artificial Intelligence and the Strategic Defense Initiative	510
26.8	Can Automatic Programming Solve the SDI Software Problem?	512
26.9	Can Program Verification Make the SDI Software Reliable?	514
26.10	Is SDIO an Efficient Way to Fund Worthwhile Research?	516
27	SDI: A Violation of Professional Responsibility	519
	<i>David Lorge Parnas</i>	
27.1	Introduction	519
27.2	SDI Background	520
27.3	The Role of Computers	522
27.4	My Decision to Act	523
27.5	Critical Issues	524
27.6	Broader Questions	528

28	Introduction <i>Leonard L. Tripp</i>	533
	The Professional Responsibilities of Software Engineers	537
	<i>David Lorge Parnas</i>	
	28.1 Abstract	537
	28.2 Personal Responsibility, Social Responsibility, and Professional Responsibility	537
	28.3 The Social Responsibility of Scientists and Engineers	538
	28.4 The Professional Responsibilities of Engineers	540
	28.5 What Are the Obligations of the Engineer?	542
	28.6 Professional Practice in Software Development	543
	28.7 A Simple Example, Pacemakers	543
	28.8 Other Concerns	545
	28.9 The “Know How” Isn’t There	546
	28.10 How to Improve the Level of Professionalism in Software Development	546
29	Introduction <i>Victor R. Basili</i>	549
	Software Aging	551
	<i>David Lorge Parnas</i>	
	29.1 Abstract	551
	29.2 What Nonsense!	551
	29.3 The Causes of Software Aging	552
	29.4 Kidney Failure	553
	29.5 The Costs of Software Aging	553
	29.6 Reducing the Costs of Software Aging	554
	29.7 Preventive Medicine	555
	29.8 Software Geriatrics	559
	29.9 Planning Ahead	562
	29.10 Barriers to Progress	563
	29.11 Conclusions for Our Profession	565
30	Introduction <i>Richard Kemmerer</i>	569
	On ICSE’s “Most Influential” Papers	571
	<i>David Lorge Parnas</i>	
	30.1 Background	571
	30.2 What Are the Best Papers of Our Most Important Software Engineering Conference?	571
	30.3 We Must Be Doing Something(s) Wrong!	572
	30.4 We Need to Change Something	575
	30.5 Conclusions	576

31	Introduction <i>Daniel Hoffman</i>	577
	Teaching Programming as Engineering	579
	<i>David Lorge Parnas</i>	
	31.1 Introduction	579
	31.2 Programming Courses and Engineering	579
	31.3 The Important Characteristics of Programming Courses	580
	31.4 The Role of Mathematics in Engineering	581
	31.5 The Role of Programming in Engineering, Business, and Science	581
	31.6 The Content of Most “Standard” Programming Courses	582
	31.7 Programming Courses Are Not Science Courses	582
	31.8 A New Approach to Teaching Programming	584
	31.9 The Mathematics Needed for Professional Programming	584
	31.10 Teaching Programming with This Mathematical Background	587
	31.11 Experience	590
	31.12 Conclusions	591
32	Introduction <i>Victor R. Basili</i>	593
	Software Engineering: An Unconsummated Marriage	595
	<i>David Lorge Parnas</i>	
	32.1 Software Engineering Education	595
33	Introduction <i>John Shore</i>	597
	Who Taught Me About Software Engineering Research?	599
	<i>David Lorge Parnas, P.Eng.</i>	
	33.1 Whom to Thank?	599
	33.2 Everard M. Williams	599
	33.3 Alan J. Perlis	601
	33.4 Leo Aldo Finzi	602
	33.5 Harlan D. Mills	603
	33.6 Conclusions	605
