Contents

Preface *page* vii

1 Components and the Way Ahead 1
Clemens Szyperski

Part One: Frameworks and Architectures 21
2 Key Concepts in Architecture Definition Languages 23
David C. Luckham, James Vera, and Sigurd Meldal
3 Acme: Architectural Description of Component-Based Systems 47
David Garlan, Robert T. Monroe, and David Wile
4 A Formal Language for Composition 69
Markus Lumpe, Franz Achermann, and Oscar Nierstrasz
5 A Semantic Foundation for Specification Matching 91
Yonghao Chen and Betty H. C. Cheng

Part Two: Object-Based Specification and Verification 111
6 Concepts of Behavioral Subtyping and a Sketch of Their Extension to Component-Based Systems 113
Gary T. Leavens and Krishna Kishore Dhara
7 Modular Specification and Verification Techniques for Object-Oriented Software Components 137
Peter Müller and Arnd Poetzsch-Heffter
8 Respectful Type Converters for Mutable Types 161
Jeannette M. Wing and John Ockerbloom

Part Three: Formal Methods and Semantics 187
9 A Formal Model for Componentware 189
Klaus Bergner, Andreas Rausch, Marc Sihling, Alexander Vilbig, and Manfred Broy

10 Toward a Normative Theory for Component-Based System Design and Analysis 211
David S. Gibson, Bruce W. Weide, Scott M. Pike, and Stephen H. Edwards
11 An Implementation-Oriented Semantics for Module Composition 231
Joseph A. Goguen and Will Tracz

Part Four: Reactive and Distributed Systems 265
12 Composition of Reactive System Components 267
Kevin Lano, Juan Bicarregui, Tom Maibaum, and Jose Fiadeiro
13 Using I/O Automata for Developing Distributed Systems 285
Stephen J. Garland and Nancy Lynch
