# Table of Contents

<b>Foreword</b> .....	<b>xiii</b>
<b>Preface</b> .....	<b>xvii</b>
<b>1. Python Shortcuts</b> .....	<b>1</b>
1.1 Swapping Values Without Using a Temporary Variable	3
1.2 Constructing a Dictionary Without Excessive Quoting	4
1.3 Getting a Value from a Dictionary	6
1.4 Adding an Entry to a Dictionary	7
1.5 Associating Multiple Values with Each Key in a Dictionary	8
1.6 Dispatching Using a Dictionary	11
1.7 Collecting a Bunch of Named Items	13
1.8 Finding the Intersection of Two Dictionaries	15
1.9 Assigning and Testing with One Statement	18
1.10 Using List Comprehensions Instead of map and filter	20
1.11 Unzipping Simple List-Like Objects	21
1.12 Flattening a Nested Sequence	23
1.13 Looping in Parallel over Index and Sequence Items	25
1.14 Looping Through Multiple Lists	27
1.15 Spanning a Range Defined by Floats	28
1.16 Transposing Two-Dimensional Arrays	30
1.17 Creating Lists of Lists Without Sharing References	31
<b>2. Searching and Sorting</b> .....	<b>34</b>
2.1 Sorting a Dictionary	38
2.2 Processing Selected Pairs of Structured Data Efficiently	40
2.3 Sorting While Guaranteeing Sort Stability	42
2.4 <i>Sorting by One Field, Then by Another</i>	43

2.5	Looking for Items in a Sorted Sequence Using Binary Search	46
2.6	Sorting a List of Objects by an Attribute of the Objects	47
2.7	Sorting by Item or by Attribute	49
2.8	Selecting Random Elements from a List Without Repetition	52
2.9	Performing Frequent Membership Tests on a Sequence	54
2.10	Finding the Deep Index of an Item in an Embedded Sequence	57
2.11	Showing Off Quicksort in Three Lines	59
2.12	Sorting Objects Using SQL's ORDER BY Syntax	61
<b>3.</b>	<b>Text</b> .....	<b>63</b>
3.1	Processing a String One Character at a Time	69
3.2	Testing if an Object Is String-Like	70
3.3	Aligning Strings	71
3.4	Trimming Space from the Ends of a String	71
3.5	Combining Strings	72
3.6	Checking Whether a String Contains a Set of Characters	74
3.7	Filtering a String for a Set of Characters	76
3.8	Controlling Case	78
3.9	Reversing a String by Words or Characters	79
3.10	Accessing Substrings	81
3.11	Changing the Indentation of a Multiline String	83
3.12	Testing Whether a String Represents an Integer	85
3.13	Expanding and Compressing Tabs	86
3.14	Replacing Multiple Patterns in a Single Pass	88
3.15	Converting Between Different Naming Conventions	91
3.16	Converting Between Characters and Values	93
3.17	Converting Between Unicode and Plain Strings	94
3.18	Printing Unicode Characters to Standard Output	96
3.19	Dispatching Based on Pattern Matches	97
3.20	Evaluating Code Inside Strings	99
3.21	Replacing Python Code with the Results of Executing That Code	100
3.22	Module: Yet Another Python Templating Utility (YAPTU)	104
3.23	Module: Roman Numerals	109
<b>4.</b>	<b>Files</b> .....	<b>113</b>
4.1	Reading from a File	117
4.2	Writing to a File	119
4.3	Searching and Replacing Text in a File	121
4.4	Reading a Particular Line from a File	122

4.5	Retrieving a Line at Random from a File of Unknown Size	123
4.6	Counting Lines in a File	125
4.7	Processing Every Word in a File	127
4.8	Reading a Text File by Paragraphs	129
4.9	Reading Lines with Continuation Characters	132
4.10	Reading Data from ZIP Files	134
4.11	Reading INI Configuration Files	135
4.12	Sending Binary Data to Standard Output Under Windows	137
4.13	Using Random-Access Input/Output	137
4.14	Updating a Random-Access File	138
4.15	Splitting a Path into All of Its Parts	140
4.16	Treating Pathnames as Objects	141
4.17	Creating Directories Including Necessary Parent Directories	143
4.18	Walking Directory Trees	144
4.19	Swapping One File Extension for Another Throughout a Directory Tree	145
4.20	Finding a File Given an Arbitrary Search Path	146
4.21	Finding a File on the Python Search Path	147
4.22	Dynamically Changing the Python Search Path	148
4.23	Computing Directory Sizes in a Cross-Platform Way	150
4.24	File Locking Using a Cross-Platform API	152
4.25	Versioning Filenames	154
4.26	Module: Versioned Backups	156
<b>5.</b>	<b>Object-Oriented Programming</b> .....	<b>160</b>
5.1	Overriding a Built-In Method	165
5.2	Getting All Members of a Class Hierarchy	167
5.3	Calling a Superclass <code>__init__</code> Method if It Exists	169
5.4	Calling a Superclass Implementation of a Method	172
5.5	Implementing Properties	174
5.6	Implementing Static Methods	176
5.7	Implementing Class Methods	177
5.8	Delegating Automatically as an Alternative to Inheritance	179
5.9	Decorating an Object with Print-Like Methods	182
5.10	Checking if an Object Has Necessary Attributes	183
5.11	Making a Fast Copy of an Object	186
5.12	Adding Methods to a Class at Runtime	188
5.13	Modifying the Class Hierarchy of an Instance	189

5.14	Keeping References to Bound Methods Without Inhibiting Garbage Collection	191
5.15	Defining Constants	193
5.16	Managing Options	194
5.17	Implementing a Set Class	198
5.18	Implementing a Ring Buffer	201
5.19	Implementing a Collection	202
5.20	Delegating Messages to Multiple Objects	203
5.21	Implementing the Singleton Design Pattern	206
5.22	Avoiding the Singleton Design Pattern with the Borg Idiom	208
5.23	Implementing the Null Object Design Pattern	211
<b>6.</b>	<b>Threads, Processes, and Synchronization</b> .....	<b>214</b>
6.1	Storing Per-Thread Information	217
6.2	Terminating a Thread	218
6.3	Allowing Multithreaded Read Access While Maintaining a Write Lock	220
6.4	Running Functions in the Future	222
6.5	Synchronizing All Methods in an Object	225
6.6	Capturing the Output and Error Streams from a Unix Shell Command	227
6.7	Forking a Daemon Process on Unix	229
6.8	Determining if Another Instance of a Script Is Already Running in Windows	231
6.9	Processing Windows Messages Using <code>MsgWaitForMultipleObjects</code>	233
<b>7.</b>	<b>System Administration</b> .....	<b>236</b>
7.1	Running a Command Repeatedly	237
7.2	Generating Random Passwords	238
7.3	Generating Non-Totally Random Passwords	240
7.4	Checking the Status of a Unix Network Interface	242
7.5	Calculating Apache Hits per IP Address	243
7.6	Calculating the Rate of Client Cache Hits on Apache	245
7.7	Manipulating the Environment on Windows NT/2000/XP	246
7.8	Checking and Modifying the Set of Tasks Windows Automatically Runs at Logon	248
7.9	Examining the Microsoft Windows Registry for a List of Name Server Addresses	250
7.10	Getting Information About the Current User on Windows NT/2000	253
7.11	Getting the Windows Service Name from Its Long Name	254

7.12	Manipulating Windows Services	255
7.13	Impersonating Principals on Windows	257
7.14	Changing a Windows NT Password Using ADSI	258
7.15	Working with Windows Scripting Host (WSH) from Python	260
7.16	Displaying Decoded Hotkeys for Shortcuts in Windows	262
<b>8.</b>	<b>Databases and Persistence</b>	<b>264</b>
8.1	Serializing Data Using the marshal Module	267
8.2	Serializing Data Using the pickle and cPickle Modules	269
8.3	Using the cPickle Module on Classes and Instances	272
8.4	Mutating Objects with shelve	275
8.5	Accessing a MySQL Database	276
8.6	Storing a BLOB in a MySQL Database	278
8.7	Storing a BLOB in a PostgreSQL Database	280
8.8	Generating a Dictionary Mapping from Field Names to Column Numbers	281
8.9	Using dtuple for Flexible Access to Query Results	283
8.10	Pretty-Printing the Contents of Database Cursors	285
8.11	Establishing Database Connections Lazily	287
8.12	Accessing a JDBC Database from a Jython Servlet	290
8.13	Module: jet2sql—Creating a SQL DDL from an Access Database	293
<b>9.</b>	<b>User Interfaces</b>	<b>300</b>
9.1	Avoiding lambda in Writing Callback Functions	302
9.2	Creating Menus with Tkinter	303
9.3	Creating Dialog Boxes with Tkinter	305
9.4	Supporting Multiple Values per Row in a Tkinter Listbox	306
9.5	Embedding Inline GIFs Using Tkinter	309
9.6	Combining Tkinter and Asynchronous I/O with Threads	310
9.7	Using a wxPython Notebook with Panels	313
9.8	Giving the User Unobtrusive Feedback During Data Entry with Qt	315
9.9	Building GUI Solutions Independent of the Specific GUI Toolkit	317
9.10	Creating Color Scales	319
9.11	Using Publish/Subscribe Broadcasting to Loosen the Coupling Between GUI and Business Logic Systems	320
9.12	Module: Building GTK GUIs Interactively	324
<b>10.</b>	<b>Network Programming</b>	<b>328</b>
10.1	Writing a TCP Client	330
10.2	Writing a TCP Server	332

10.3	Passing Messages with Socket Datagrams	333
10.4	Finding Your Own Name and Address	335
10.5	Converting IP Addresses	336
10.6	Grabbing a Document from the Web	338
10.7	Being an FTP Client	339
10.8	Sending HTML Mail	340
10.9	Sending Multipart MIME Email	342
10.10	Bundling Files in a MIME Message	344
10.11	Unpacking a Multipart MIME Message	346
10.12	Module: PyHeartBeat—Detecting Inactive Computers	348
10.13	Module: Interactive POP3 Mailbox Inspector	352
10.14	Module: Watching for New IMAP Mail Using a GUI	355
<b>11.</b>	<b>Web Programming</b>	<b>358</b>
11.1	Testing Whether CGI Is Working	359
11.2	Writing a CGI Script	361
11.3	Using a Simple Dictionary for CGI Parameters	363
11.4	Handling URLs Within a CGI Script	364
11.5	Resuming the HTTP Download of a File	366
11.6	Stripping Dangerous Tags and Javascript from HTML	368
11.7	Running a Servlet with Jython	370
11.8	Accessing Netscape Cookie Information	371
11.9	Finding an Internet Explorer Cookie	374
11.10	Module: Fetching Latitude/Longitude Data from the Web	376
<b>12.</b>	<b>Processing XML</b>	<b>379</b>
12.1	Checking XML Well-Formedness	381
12.2	Counting Tags in a Document	382
12.3	Extracting Text from an XML Document	384
12.4	Transforming an XML Document Using XSLT	385
12.5	Transforming an XML Document Using Python	386
12.6	Parsing an XML File with <code>xml.parsers.expat</code>	387
12.7	Converting Ad-Hoc Text into XML Markup	389
12.8	Normalizing an XML Document	391
12.9	Controlling XSLT Stylesheet Loading	392
12.10	Autodetecting XML Encoding	395
12.11	Module: XML Lexing (Shallow Parsing)	397
12.12	Module: Converting a List of Equal-Length Lists into XML	400

<b>13. Distributed Programming</b> .....	<b>404</b>
13.1 Making an XML-RPC Method Call	406
13.2 Serving XML-RPC Requests	407
13.3 Using XML-RPC with Medusa	409
13.4 Writing a Web Service That Supports Both XML-RPC and SOAP	411
13.5 Implementing a CORBA Client and Server	414
13.6 Performing Remote Logins Using telnetlib	416
13.7 Using Publish/Subscribe in a Distributed Middleware Architecture	419
13.8 Using Request/Reply in a Distributed Middleware Architecture	422
<b>14. Debugging and Testing</b> .....	<b>425</b>
14.1 Reloading All Loaded Modules	426
14.2 Tracing Expressions and Comments in Debug Mode	427
14.3 Wrapping Tracebacks in HTML	430
14.4 Getting More Information from Tracebacks	431
14.5 Starting the Debugger Automatically After an Uncaught Exception	434
14.6 Logging and Tracing Across Platforms	436
14.7 Determining the Name of the Current Function	439
14.8 Introspecting the Call Stack with Older Versions of Python	441
14.9 Debugging the Garbage-Collection Process	442
14.10 Tracking Instances of Particular Classes	443
<b>15. Programs About Programs</b> .....	<b>446</b>
15.1 Colorizing Python Source Using the Built-in Tokenizer	451
15.2 Importing a Dynamically Generated Module	454
15.3 Importing from a Module Whose Name Is Determined at Runtime	456
15.4 Importing Modules with Automatic End-of-Line Conversions	457
15.5 Simulating Enumerations in Python	459
15.6 Modifying Methods in Place	462
15.7 Associating Parameters with a Function (Currying)	463
15.8 Composing Functions	465
15.9 Adding Functionality to a Class	467
15.10 Adding a Method to a Class Instance at Runtime	469
15.11 Defining a Custom Metaclass to Control Class Behavior	471
15.12 Module: Allowing the Python Profiler to Profile C Modules	473
<b>16. Extending and Embedding</b> .....	<b>477</b>
16.1 Implementing a Simple Extension Type	479
16.2 Translating a Python Sequence into a C Array with the PySequence_Fast Protocol	483

16.3	Accessing a Python Sequence Item-by-Item with the Iterator Protocol	487
16.4	Returning None from a Python-Callable C Function	490
16.5	Coding the Methods of a Python Class in C	491
16.6	Implementing C Function Callbacks to a Python Function	493
16.7	Debugging Dynamically Loaded C Extensions with gdb	496
16.8	Debugging Memory Problems	498
16.9	Using SWIG-Generated Modules in a Multithreaded Environment	499
<b>17.</b>	<b>Algorithms</b>	<b>501</b>
17.1	Testing if a Variable Is Defined	505
17.2	Evaluating Predicate Tests Across Sequences	508
17.3	Removing Duplicates from a Sequence	509
17.4	Removing Duplicates from a Sequence While Maintaining Sequence Order	511
17.5	Simulating the Ternary Operator in Python	515
17.6	Counting Items and Sorting by Incidence (Histograms)	517
17.7	Memoizing (Caching) the Return Values of Functions	519
17.8	Looking Up Words by Sound Similarity	521
17.9	Computing Factorials with lambda	523
17.10	Generating the Fibonacci Sequence	524
17.11	Wrapping an Unbounded Iterator to Restrict Its Output	526
17.12	Operating on Iterators	528
17.13	Rolling Dice	531
17.14	Implementing a First-In First-Out Container	532
17.15	Modeling a Priority Queue	534
17.16	Converting Numbers to Rationals via Farey Fractions	535
17.17	Evaluating a Polynomial	537
17.18	Module: Finding the Convex Hull of a Set of 2D Points	538
17.19	Module: Parsing a String into a Date/Time Object Portably	541
