

CONTENTS

1. Some Experimental Techniques	1
1.1. Introduction	1
1.2. Electrochemical Techniques	2
1.2.1. Preparation of Surfaces	2
1.2.2. Well-Defined Electrode Surfaces	5
1.2.3. The Determination of Real Areas	5
1.2.4. Preparation of Clean Solutions	8
1.2.5. Cells	9
1.2.6. Surface Kinetic Measurements "in Steady State"	11
1.2.7. Electrochemical Spectra	12
1.2.8. Current Transients at Constant Potential and Temperature— Potential-Step Method	15
1.2.9. Potential-Time Relationship at Constant Current— "Current-Step" Method	15
1.2.10. Mechanism Determination and Potential-Sweep Techniques	16
1.2.11. Photocurrent-Position Relation at Constant Light Intensity	17
1.2.12. Photocurrent-Time Relation at Constant Potential	22
1.2.13. Photocurrent-Potential Relation at Constant Light Intensity	22
1.2.14. Impedance Analysis.	23
1.2.15. Current-Pressure Relation at Constant Potential	25
1.2.16. Current at Constant Potential as a Function of Temperature	25
1.2.17. Use of Microelectrodes	26
1.2.18. Surface Conductance	27
1.2.19. Stress Measurements	28
1.2.20. Analysis of the Double Layer by the Application of Gibbsian Thermodynamics	29
1.2.21. Measurement of the Interfacial Tension between Solid and Solution	29
1.2.22. Semiconductors and Insulators	32
1.3. <i>Ex Situ</i> Spectroscopic Techniques	32
1.3.1. Low-Energy Electron Diffraction (LEED)	33
1.3.2. Scanning Electron Microscopy (SEM)	33

1.3.3.	Energy Dispersive Analysis of X Rays (EDAX)	33
1.3.4.	Auger Electron Spectroscopy (AES)	34
1.3.5.	X-Ray Photoelectron Spectroscopy (XPS)	35
1.3.6.	Secondary Ion Mass Spectroscopy (SIMS)	36
1.3.7.	Ion Scattering Spectroscopy (ISS)	37
1.3.8.	Rutherford Backscattering (RBS)	37
1.3.9.	Summary	37
1.4.	<i>In Situ</i> Spectroscopic Techniques	37
1.4.1.	Radiotracer Methods	39
1.4.2.	Ellipsometry	41
1.4.3.	Surface Plasmons	41
1.4.4.	Specular Reflectance Spectroscopy	42
1.4.5.	Surface-Enhanced Raman Spectroscopy (SERS)	43
1.4.6.	Fourier Transform Infrared Spectroscopy (FTIR)	43
1.4.7.	Second-Harmonic Generation	45
1.4.8.	Mössbauer Spectra	46
1.4.9.	X-Ray Diffraction	48
1.4.10.	Extended X-Ray Absorption Fine Structure (EXAFS)	48
1.4.11.	Scanning Tunneling Microscopy (STM)	49
1.5.	Prospects	51
1.6.	Evolutionary Goal	53
	References	53
 2. The Interfacial Structure		59
2.1.	Introduction	59
2.2.	Thermodynamics	61
2.2.1.	The Electrochemical Potential ($\bar{\mu}_i^a$)	61
2.2.2.	Polarizable and Nonpolarizable Interfaces	62
2.2.3.	Electrochemical Equilibrium	63
2.2.4.	The Gibbs Surface Excess	63
2.2.5.	The Central Equation for the Thermodynamics	64
2.2.6.	Electrocapillary Curves and the Lippmann Equation	65
2.2.7.	Electrical Capacitance of an Interphase	66
2.2.8.	Determination of the Gibbs Surface Excesses	66
2.2.9.	Thermodynamics of the Interface	67
2.2.10.	The Diffuse (or Gouy) Layer	68
2.2.11.	Graininess: A Warning Note	68
2.3.	Potentials	69
2.3.1.	The Outer Potential (ψ)	70
2.3.2.	Outer Potential Difference, or Volta Potential Difference (${}^a\Delta^b\psi$)	70
2.3.3.	Surface Potential (χ)	70
2.3.4.	The Surface Potential Difference (${}^m\Delta^s\chi$)	72
2.3.5.	The Inner Potential (ϕ)	72
2.3.6.	The Meaning of the Measured Potential in an Electrochemical Cell	72
2.3.7.	The Conventional Electrode Potential	75
2.3.8.	The Absolute Potential	75
2.3.9.	The Absolute Value of the Hydrogen Electrode Potential	76
2.3.10.	The Absolute Galvani Potential Difference	78

2.3.11.	The Fermi Level	78
2.3.11a.	Fermi Level and Fermi Energy	78
2.3.11b.	The Fermi Level for Electrons in Solution, $(E_F)_{\text{soln}}$	79
2.3.12.	Which Potentials in Electrochemical Systems Can Be Measured?	80
2.3.13.	Theory of the Determination of the Volta Potential Difference	81
2.3.14.	Calculation of the Surface Potentials	82
2.3.15.	Work Function	83
2.3.15a.	Electron Work Function of Metal in Contact with a Vacuum	83
2.3.15b.	Electronic Work Function in Any Polar Phase at Any Potential	85
2.3.15c.	Electron Work Function of Metals at Any Potential	86
2.4.	The Potential of Zero Charge	87
2.4.1.	Introduction	87
2.4.2.	Experimental Methods of Determination of the Potential of Zero Charge	88
2.4.2a.	Radiotracer method	88
2.4.2b.	Differential Capacity Minimum	88
2.4.2c.	Friction	88
2.4.2d.	Electrocapillarity	89
2.4.3.	Some Selected Values	90
2.4.4.	Potential of Zero Charge, Work Function, and pH	90
2.4.5.	Frumkin's Concepts of Free and Total Charge and the Arising of Two Values of the pzc	90
2.4.6.	The Contribution of the Metal to the Double-Layer Structure	93
2.5.	Some Dielectric Aspects of Matter in Interphases	95
2.5.1.	Introduction	95
2.5.2.	Breakout from the Water Structure and Dielectric Saturation on the Electrode	96
2.5.3.	The Dielectric Constant of Fully Oriented Water	97
2.5.4.	Variation of the Dielectric Constant in the Diffuse Layer	97
2.5.5.	Dielectric Relaxation in the Double Layers	98
2.6.	Excess Entropy in the Double Layer	101
2.6.1.	Introduction: The Surface Excess Entropy	101
2.6.2.	The Solvent Excess Entropy	101
2.6.3.	Modelistic Approach to the Solvent Excess Entropy of Interfacial Water	102
2.7.	Solvent Structure at the Interface	109
2.7.1.	Preliminary Considerations	109
2.7.2.	The Three-State Water Model	110
2.7.3.	The Magnitude of the Water Dipole Contribution to the Double-Layer Potential	118
2.7.4.	Further Work on Solvent Structures	120
2.7.5.	A Summary on Double-Layer Water Structure	125
2.8.	The Emersed Double Layer	127
2.9.	Electric Imaging at Solid-Liquid Interfaces	128
2.9.1.	Introduction	128
2.9.2.	Multiple-Imaging Interaction Energy across a Smoothly Varying Dielectric	129
2.10.	Isoconcs.	132
2.10.1.	Introduction	132
2.10.2.	Statistical Considerations	133

2.10.3.	Evaluation of the Lateral Interaction Energy	133
2.10.4.	Evaluation of the Dispersion Energy	135
2.10.5.	Experimental Dependence of the Contact-Adsorbed Quantity upon the Charge on the Metal	135
2.10.6.	Deduction of the Isoconc	136
2.10.7.	Prediction of Inflection Points on the θ - q_m Curve	139
2.10.8.	Capacitance-Charge Relation at the Polarizable Interface	140
2.10.9.	Significance of θ_2	144
2.10.10.	Dependence of Hump and Minimum on Temperature	145
2.10.11.	Standard States in Adsorption at Interfaces	146
2.10.12.	The Virial Approach to Adsorption Isotherms	148
2.10.13.	Testing Isotherms	149
2.10.14.	Forces in Contact Adsorption	151
2.11.	Partial Charge Transfer	152
2.11.1.	Basic Definitions and Equations	152
2.11.2.	Electrode Capacity and Partial Charge Transfer	154
2.12.	Interfacial Structure Experiments Made on Specific Faces of Single Crystals	157
2.12.1.	Introduction	157
2.12.2.	Preparation and Cutting	158
2.12.2a.	Growth from the Metal Melt	158
2.12.2b.	Growth from the Metal Vapor	158
2.12.2c.	Growth from Metal Electrolyte Solutions	158
2.12.2d.	Cutting and Polishing	158
2.12.3.	Results Showing Properties Which Differ with Crystal Planes	160
2.12.3a.	Potential of Zero Charges	160
2.12.3b.	The Double-Layer Region and Charge-Potential Relations	161
2.12.4.	Effect of Surface Structure on the Double-Layer Properties	161
2.12.4a.	Defects	161
2.12.4b.	Roughness	162
2.12.5.	Assessment of Single-Crystal Studies	162
2.13.	The Interface between a Metal and a Pure Electrolyte	163
2.13.1.	Introduction	163
2.13.2.	The Structure of the Metal-Pure Electrolyte Interface near the pzc	165
2.13.3.	The Structure of the Metal-Molten Salt Interface Far from the pzc	166
2.13.4.	Computer Simulation in Systems Involving Molten Salts	166
2.14.	The Semiconductor-Solution Interphase	167
2.14.1.	Introduction	167
2.14.2.	The Space-Charge Region inside a Semiconductor	168
