Genome Instability in Bacteria and Archaea

4. Genome Instability in Bacteria and Archaea: Strategies for Maintaining Genome Stability

J.-E. Messling and A.B. Williams

1. Introduction	51
2. Responses to DNA Damage	55
2.1 The SOS Response: A Primitive Cell-Cycle Checkpoint	55
2.2 An Archaeal UV Response Based on DNA Sharing	56
3. DNA Repair Pathways	57
3.1 Direct Reversal of DNA Damage	57
3.2 Base Excision Repair and Removal of Uracil from DNA	58
3.3 Nucleotide Excision Repair: A Versatile DNA-Repair Pathway	59
3.4 Correcting Mismatched Bases: Cleanup After DNA Replication	60
3.5 Recombination Repair: Dealing With Double-Strand Breaks	61
4. Restriction-Modification Systems: Protecting the Genome From Invaders	62
5. Conclusion	64
Glossary	64
List of Abbreviations	64
References	65

5. Genome Instability in Bacteria: Causes and Consequences

A.B. Williams

1. Introduction	69
2. Effects of Stress Responses on Genome Instability	69
2.1 The SOS Response	70
2.2 The RpoS-Mediated General Stress Response	71
2.3 The Stringent Response	72
2.4 Heat and Cold Shock Responses	72
2.5 Polyphosphate-Mediated Starvation Response	72
3. Genome Instability Due to Stable Mutator Genotypes	73
4. Genome Instability Due to Homologous and Illegitimate Recombination	74
4.1 Microsatellite Instability	74
4.2 Gene Conversion	74
4.3 Site-Specific Inversion Systems	75
4.4 Error-Prone Double-Strand Break Repair	76

5. Genome Instability Due to Specialized Genetic Elements	77
5.1 Insertion Sequences	77
5.2 Transposons (Nonconjugative)	78
5.3 Miniature Inverted-Repeat Transposable Elements	78
6. Genome Instability Due to Genetic Exchange	78
6.1 Transduction	79
6.2 Conjugation	79
6.3 Transformation	80
7. Conclusion	80
Glossary	80
List of Abbreviations	81
References	81

6. CRISPR: Bacteria Immune System

A. Golubov

1. Introduction	87
2. History of the CRISPR/Cas Discovery	87
3. Structure of the CRISPR Loci	88
4. CRISPR/Cas Classification	89
5. Composition of the CRISPR/Cas Systems	90
6. Molecular Machines of CRISPR/Cas Systems	91
7. CRISPR/Cas Systems at Work	92
7.1 The CRISPR Adaptation	92
7.2 The Expression Stage	94
7.3 The CRISPR Interference	94
8. Other Roles of the CRISPR/Cas Systems	94
9. Conclusion	95
Glossary	95
List of Acronyms and Abbreviations	96
References	96

Section III

Genome Stability of Unicellular Eukaryotes

7. From Micronucleus to Macronucleus: Programmed DNA Rearrangement Processes in Ciliates Are Regulated Epigenetically by Small and Long Noncoding RNA Molecules

F. Jönsson

1. Introduction	101
2. The Sexual Life Circle of Ciliates	102
3. Organization of the Micro- and Macronuclear Genomes	103
4. Epigenetic Regulation of Macronuclear Development in <i>Tetrahymena</i>	106

5. Epigenetic Regulation of Macronuclear Development in <i>Stichotrichous</i> Ciliates	108	1.2 <i>Drosophila</i> as a Model Organism: The Basics	140
6. Conclusion	112	2. Mitotic Recombination	140
Glossary	112	2.1 Mitotic Recombination: A Historical Perspective	141
List of Abbreviations	112	2.2 Mechanisms of Mitotic Recombination	141
References	112	2.3 Initial Response and Pathway Choice	141
8. Homologous Recombination and Nonhomologous End-Joining Repair in Yeast		2.4 Synthesis-Dependent Strand Annealing: A Model Consummated in Flies	143
<i>R.E. Jones and T.C. Humphrey</i>		2.5 End Joining in <i>Drosophila</i>	145
1. Introduction	117	2.6 Mitotic COs and the dHJ Model	145
1.1 A Brief History	118	3. Meiotic Recombination	146
2. Homologous Recombination Models	118	3.1 Meiotic Recombination: A Historical Perspective	146
2.1 Holliday Model	118	3.2 Mechanisms of Meiotic Recombination	147
2.2 Double-Strand Break Repair Model	118	3.3 Initiation of Recombination	147
2.3 Synthesis-Dependent Strand Annealing Model	120	3.4 Preference of Homolog as Repair Template	147
2.4 Break-Induced Replication Model	120	3.5 Promoting CO Formation: Pro-CO Complexes	148
2.5 Single-Strand Annealing Model	120	3.6 Promoting CO Formation: Meiotic Resolvases	148
3. Common Homologous Recombination Steps	121	3.7 Meiotic Recombination in <i>Drosophila</i> : Double-End Engagement Model	149
3.1 End Resection	121	4. <i>Drosophila</i> : The Next 100 Years	150
3.2 Nucleofilament Formation	124	Glossary	150
3.3 Homology Search and Strand Invasion	124	List of Acronyms and Abbreviations	151
3.4 DNA Repair Synthesis	124	References	152
3.5 Strand Annealing	125		
3.6 Resolution and Dissolution of Recombination Intermediates	125		
4. Nonhomologous End-Joining	126		
4.1 Core Nonhomologous End-Joining Machinery	126		
4.2 Alternative End-Joining	128		
5. Cell Cycle Regulation of Homologous Recombination and Nonhomologous End-Joining	129		
6. Conclusion	129		
Glossary	129		
List of Acronyms and Abbreviations	130		
References	131		

Section IV Genome Stability in Multicellular Eukaryotes

9. Meiotic and Mitotic Recombination: First in Flies

J.K. Holsclaw, T. Hatkevich and J. Sekelsky

1. Introduction	139
1.1 Recombination in <i>Drosophila</i> : The First 100 Years	139

10. Genome Stability in *Drosophila*: Mismatch Repair and Genome Stability

T. Negishi

1. Introduction	155
2. MMR Activity in <i>Drosophila</i>	155
3. MMR Genes in <i>Drosophila</i>	156
4. MMR and Microsatellite Instability	156
5. The Role of MMR in Meiotic Recombination	157
6. MMR and Somatic Cell Mutation	157
7. Conclusion	159
Glossary	160
List of Abbreviations	160
References	160

11. Genome Stability in *Caenorhabditis elegans*

M. Rieckher, A.F.C. Lopes and B. Schumacher

1. Introduction	163
2. The <i>Caenorhabditis elegans</i> Model	164
3. Powerful Genetic Tools to Explore DDR Dynamics	164

4. Genotoxic Agents for DNA Damage Induction	166	5. Future Perspectives of the Genome-Editing Technology	196
5. Methods for DNA Damage Detection	166	Glossary	196
6. Excision Repair	167	List of Acronyms and Abbreviations	197
6.1 Nucleotide Excision Repair	167	References	197
6.2 Base Excision Repair	169		
7. Mismatch Repair	170	13. Plant Genome Stability: General Mechanisms	
8. Double-Strand Break Repair in <i>C. elegans</i>	170	<i>A. Bilichak</i>	
8.1 Homologous Recombination	170	1. Introduction	203
8.2 Nonhomologous End Joining	174	2. DNA-Damaging Agents	203
8.3 Other Conserved DSB-Repair Mechanisms	174	3. Sensing DNA Damage	204
9. DNA-Damage Checkpoints	175	4. Chromatin Architecture and DNA Repair	205
9.1 Sensors of the DNA Damage Response	175	5. Photoreactivation	206
9.2 Checkpoint Sensor Proteins in Telomere Length Maintenance	175	6. Base Excision Repair	208
9.3 Effectors of DNA-Damage Checkpoints	176	7. Nucleotide Excision Repair	209
9.4 Cytokinesis Checkpoint	176	8. Mismatch Repair	211
10. Concluding Remarks	177	9. DNA Double-Strand Break Repair	212
Glossary	177	9.1 Homologous Recombination	214
List of Abbreviations	179	9.2 Nonhomologous End-Joining	217
Acknowledgments	180	10. DNA Repair in Organelles	218
References	180	11. Future Perspective	218
		Glossary	218
		List of Acronyms and Abbreviations	218
		References	219
12. Genetic Engineering of Plants Using Zn Fingers, TALENs, and CRISPRs			
<i>A. Bilichak and F. Eudes</i>			
1. Introduction	187	Section V	
2. Zinc Finger Nucleases for Genome Engineering of Plants	188	Genome Stability in Mammals	
2.1 Zinc Finger Nucleases Application in Model Plant Species	189	14. Cell-Cycle Control and DNA-Damage Signaling in Mammals	
2.2 Zinc Finger Nucleases Application in Crops	190	<i>V. Gomez and A. Hergovich</i>	
2.3 Potential Limitations of the Zinc Finger Nucleases Technology	191	1. Introduction	227
3. TALENs for the Genome Engineering of Plants	191	2. Cell-Cycle Progression in Mammalian Cells	228
3.1 The Application of TALENs in the Model Plant Species	191	2.1 Definition of Cell-Cycle Phases	228
3.2 The Application of TALENs in Crops	192	2.2 Molecular Regulation of Cell-Cycle Progression	228
3.3 Potential Limitations of the TALEN Technology	193	3. DNA-Damage Signaling and Repair in Mammals	230
4. The CRISPR/Cas9 System for the Genome Engineering of Plants	193	3.1 DDR Signaling	230
4.1 The Application of the CRISPR/Cas System in Model Plant Species	194	3.2 DNA-Damage Repair	232
4.2 The Application of the CRISPR/Cas System in Crops	195	4. Checkpoint Control: DNA-Damage Signaling and the Mammalian Cell Cycle	234
4.3 Potential Limitations of the CRISPR/Cas System	195	4.1 The G1/S Cell-Cycle Checkpoint	235
		4.2 The Intra-S-Phase Cell-Cycle Checkpoint	236
		4.3 The G2/M Cell-Cycle Checkpoint	236
		4.4 DNA-Damage Checkpoints and Disease	236

5. Conclusion	237	8. Physiological Roles of RAD18	266
Glossary	237	8.1 Developmental Roles of RAD18	266
List of Acronyms and Abbreviations	238	8.2 RAD18 Roles in Tumorigenesis	266
Acknowledgments	238	9. Conclusions and Perspectives	267
References	238	Glossary	267
		List of Abbreviations	267
		References	268
15. The Role of p53/p21/p16 in DNA-Damage Signaling and DNA Repair		17. Base Excision Repair and Nucleotide Excision Repair	
<i>Y. Kulaberoglu, R. Gundogdu and A. Hergovich</i>		<i>T. Izumi and I. Mellon</i>	
1. Introduction	243	1. General Overview and Historical Perspectives of Two DNA Excision-Repair Pathways, BER and NER	275
2. The p53 Tumor-Suppressor Protein	244	2. Mammalian BER	276
2.1 p53 in the DNA-Damage Response	244	2.1 History and Overview of BER	276
2.2 p53 in DNA-Damage Repair	246	2.2 Types of DNA Damage Repaired by BER	276
2.3 p53 in Tumor Suppression and the DNA-Damage Response	246	2.3 Mechanism of Mammalian BER	277
2.4 p53 and Targeted DNA-Damaging Cancer Therapy	247	2.4 BER Gene Knockout in Mice and Cells	283
3. The p21 Tumor-Suppressor Protein	248	3. Mammalian NER	283
3.1 p21 in the DNA-Damage Response	248	3.1 History and Overview of NER	283
3.2 p21 in DNA-Damage Repair	249	3.2 Types of DNA Damage Repaired by NER	286
3.3 p21 and Tumor Suppression	249	3.3 Mechanisms of Mammalian NER	286
4. The p16 ^{INK4A} Tumor-Suppressor Protein	250	3.4 Transcription-Coupled NER	289
5. Conclusion	251	3.5 NER and Chromatin Structure	290
Glossary	252	3.6 Alterations in NER and Cancer Predisposition	290
List of Acronyms and Abbreviations	252	4. Biological Implications Beyond DNA Damage and Repair	291
Acknowledgments	252	4.1 Diversity of Immune Cells by Activation-Induced Deaminase	291
References	253	4.2 DNA Demethylation	291
16. Roles of RAD18 in DNA Replication and Postreplication Repair		5. Interplay Between NER and BER: The Key Role of the DNA-Damage Response for Prevention of Cellular Degeneration	291
<i>C. Vaziri, S. Tateishi, E. Mutter-Rottmayer and Y. Gao</i>		5.1 Overlapping Substrate Specificity Between BER and NER	291
1. Introduction: The DDR, DNA Damage-Tolerance and DNA Damage-Avoidance Mechanisms	257	5.2 A Nuclear-Mitochondria Signaling Network as a Main Platform of BER/NER Interplay	292
2. Identification of RAD18-RAD6 as a Mediator of DNA Damage Tolerance	258	6. Concluding Remarks	293
3. RAD18-Mediated PCNA Monoubiquitination and the TLS Polymerase Switch	259	Glossary	293
4. RAD18 Structure, Activation, and Coordination With the DDR	259	List of Abbreviations	294
4.1 RAD18 Structure	259	Acknowledgment	295
4.2 RAD18 Activation	260	References	295
4.3 Transcriptional and Posttranslational Regulation of RAD18	262		
5. DNA Replication-Independent RAD18 Activation and TLS	262	18. DNA Mismatch Repair in Mammals	
6. RAD18 Functions in Error-Free PRR via Template Switching	264	<i>M. Yang and P. Hsieh</i>	
7. TLS- and TS-Independent Roles of RAD18 in Genome Maintenance	265	1. Introduction and Brief History	303
		2. Post-Replication Mismatch Repair	304

2.1	Overview	304	4.	Roles of HR in Replication Fork Reactivation and DSB Repair	341
2.2	MutS Homologs	305	4.1	Fork Stability/Restart by HR Upon Replication Stress	341
2.3	MutL Homologs	308	4.2	Competition for the DNA DSB–Repair Pathway Choice and Consequences for Meiosis and Genome Manipulation	343
2.4	Licensing Targeted Excision	310	5.	The Dark Side of HR: Promotion of Genome Instability	344
2.5	Strand Discrimination	311	6.	Protection Against Excessive HR	344
3.	Mismatch Repair and the DNA-Damage Response	312	6.1	Cell-Cycle Regulation	345
3.1	Alkylation Damage and Thiopurines	312	6.2	Protection Against HR Intermediate Accumulation	346
3.2	Fluorouracil	313	6.3	Repression of HR Initiation	346
3.3	Oxidative Damage and Noncanonical MMR	313	7.	Homologous Recombination, Genome Stability, and Cancer	346
3.4	UV, Cisplatin, and DNA Cross-Links	313	7.1	<i>Misregulation of HR in Tumors</i>	346
4.	Regulation of MMR	314	7.2	Anticancer Strategies	347
5.	Future Directions	314	8.	HR in Genomic Molecular Evolution	347

Human Diseases Associated With Genome Instability

26. Human Diseases Associated With Genome Instability

B.C. Feltes, J. de Faria Poloni, K.N. Miyamoto and D. Bonatto

1. Introduction	447
2. Rare Genetic Diseases Associated With DNA Repair	447
2.1 NER-Related Diseases: Xeroderma Pigmentosum, Trichothiodystrophy, and Cockayne Syndrome	448
2.2 Fanconi Anemia	450
2.3 RECQ-Related Diseases: Rothmund–Thomson Syndrome, Werner Syndrome, and Bloom Syndrome	450
2.4 Ataxia Telangiectasia	453
2.5 Hutchinson–Gilford Progeria Syndrome	453
2.6 Rare Genetic Diseases: Summary	454
3. Cancer and Genome Instability	454
4. Epigenetic Regulation of Cell Cycle and DNA Repair in Cancer	456
Glossary	459
List of Acronyms and Abbreviations	459
References	461

27. Cancer and Genomic Instability

W. Wei, Y. Cheng and B. Wang

1. Introduction	463
2. DNA-Repair Pathways	463
2.1 Base Excision–Repair Pathway	464
2.2 Nucleotide Excision–Repair Pathway	464
2.3 Mismatch–Repair Pathway	465
2.4 Repair of DNA Double-Strand Breaks	468
3. Genomic Instability in Hereditary Cancer	468
3.1 Li–Fraumeni Syndrome and TP53	469
3.2 MYH-Associated Polyposis and Deficiency in Base Excision Repair	469
3.3 Xeroderma Pigmentosum and a Deficiency in Nucleotide Excision Repair	470

3.4 Hereditary Cancers Associated With Defects in DNA Mismatch Repair	471
3.5 Hereditary Cancers Associated With Defects of DNA Double-Strand Break Repair	472

4. Genomic Instability in Sporadic Cancers	474
4.1 CIN in Sporadic Cancers	474
4.2 Hypothesis of the Mechanisms of CIN	475
4.3 High-Throughput Sequencing Studies on CIN in Various Cancers	475
4.4 Oncogenes Induce CIN	476
4.5 Chromothripsis	477
4.6 Microsatellite Instability in Sporadic Cancer	477
5. Triggering Excessive Genomic Instability by Targeting DNA-Repair Pathways as a Strategy for Cancer Therapy	478
6. Conclusion	480
Glossary	480
List of Abbreviations	480
References	483

28. Chromatin Modifications in DNA Repair and Cancer

M. Renaud-Young, K. Riabowol and J. Cobb

1. Introduction	487
2. Interrelationship of DNA and Chromatin	487
3. Histone Modifications and Chromatin Remodelers	488
3.1 Histone Acetyltransferases and Deacetylases	488
3.2 Histone Lysine Methyltransferases and Demethylases	490
3.3 Histone Ubiquitination and Sumoylation	491
3.4 Histone Phosphorylation	491
3.5 Nucleosome Exchangers and Remodelers	491
3.6 Histone Variants	492
4. Chromatin Modifiers in Genome Stability	492
4.1 DNA Replication	492
4.2 DNA-Damage Response and Repair	493
5. Replication Stress, Activation of the S-Phase Checkpoint and DNA-Damage Tolerance	498
5.1 DNA-Damage Tolerance	498
5.2 PCNA Modification and DNA-Damage Tolerance	499
5.3 EF-Damage Tolerance	500
5.4 Translesion Synthesis–Damage Tolerance	500
5.5 Checkpoint Signaling, Chromatin, and DDT	500

6. Overview: The Relationship Between Chromatin and Repair Choice	502	2.3 DNA Damage–Induced Nucleolar Stress in Intact Brain	529
Glossary	503	2.4 Mediators of the Nucleolar Stress Response	529
List of Abbreviations	503	2.5 Ribosomal Deficiency and Neurodegeneration as Consequences of Persistent Nucleolar Stress	530
References	503		
29. Genomic Instability and Aging: Causes and Consequences		3. Neurodegeneration-Associated Instability of rDNA	531
<i>C. Sidler</i>		3.1 Consequences of rDNA Instability in Nonneuronal Systems	531
1. Introduction	511	3.2 Mechanisms of rDNA Instability in Nonneuronal Systems	532
2. Age-Related Accumulation of DNA Damage and Genomic Instability	512	3.3 Evidence of rDNA Instability in the Brain	533
2.1 Accumulation of Point Mutations, Insertions, and Deletions	512	3.4 Potential Mechanisms and Significance of Neurodegeneration-Associated Instability of rDNA	534
2.2 Accumulation of Large Chromosomal Aberrations	512		
3. Causes of Age-Dependent Accumulation of Genomic Instability	512	4. Concluding Remarks	535
3.1 Oxidative Stress	512	Glossary	536
3.2 Depurination, Depyrimidination, and Deamination	513	List of Abbreviations	536
3.3 Replication Errors and Replication Stress	513	Acknowledgments	536
3.4 Deterioration of Genome-Maintenance Mechanisms	515	References	536
3.5 Altered Nuclear Architecture	517		
3.6 Selection	518		
4. Genomic Regions With Various Susceptibility to Genomic Instability	518		
4.1 Nuclear DNA	518		
4.2 Mitochondrial DNA	520		
5. Role of Genomic Instability in Aging?	520		
5.1 Effect of Genomic Instability on the Gene Expression Profile	521		
5.2 Physiological Consequences	521		
6. Conclusion	521		
Glossary	522		
List of Abbreviations	522		
References	523		
30. Nucleolar Contributions to DNA-Damage Response and Genomic (In)Stability in the Nervous System			
<i>M. Hetman</i>			
1. Introduction	527		
2. Nucleolus as a Sensor of Neuronal DNA Damage	528		
2.1 Effects of DNA Damage on the Nucleolus	528		
2.2 Nucleolar Stress-Mediated Responses to Neuronal DNA Damage	528		
		Section VII	
		Effect of Environment on Genome Stability	
		31. Diet and Nutrition	
		<i>L.R. Ferguson</i>	
		1. Introduction	543
		2. Dietary Causes of Genomic Instability	544
		2.1 Dietary Excess (Obesity)	544
		2.2 Alcohol	544
		2.3 Red Meats	544
		2.4 Mutagens Formed During Food Processing	545
		2.5 Mutagens Formed During Storage of Foods	545
		2.6 Accumulation of Environmental Pollutants in Animal Flesh	546
		2.7 Natural Pesticides in Food Plants	546
		3. Dietary Protection Against Genomic Instability	546
		3.1 Classic Nutrients	546
		3.2 Bioactive Food Components	548
		4. The Significance of Genetic Polymorphisms	549
		5. Conclusions	549
		Glossary	549
		List of Abbreviations	549
		References	550

32. Chemical Carcinogens and Their Effect on Genome and Epigenome Stability

O. Kovalchuk

1. Introduction	555
2. Epigenetic Regulators	556
2.1 DNA Methylation	556
2.2 Histone Modifications	557
2.3 RNA-Induced Effects	558
3. Effects of Metals	558
4. Tamoxifen Effects	559
5. Effects of 1,3-Butadiene	560
6. Influence of Polycyclic Aromatic Hydrocarbons	561
7. Conclusions	562
Glossary	563
List of Abbreviations	563
References	563

33. Environmental Sources of Ionizing Radiation and Their Health Consequences

A.A. Goodarzi, A. Anikin and D.D. Pearson

1. Introduction	569
2. The Molecular Effects of IR in Cells	569
3. Radiation Dosage and Linear Energy Transfer	571
4. Nuclear Military Attacks and Civilian Nuclear Disasters	572
5. Aerospace Travel	573
6. Medical Radiation (Radiotherapy and Medical Imaging)	574
7. Radon Gas	575
8. Conclusion	577
Glossary	577
List of Abbreviations	577
References	578

Section VIII

Bystander and Transgenerational Effects – Epigenetic Perspective

34. Sins of Fathers Through a Scientific Lens: Transgenerational Effects

M. Merrifield and O. Kovalchuk

1. Introduction	585
2. Radiation-Induced Genome Instability	586

2.1 Transgenerational Effects and Transgenerational Genome Instability	586
--	-----

2.2 Bystander Effects	588
-----------------------	-----

35. Mechanisms of Transgenerational Effects: Epigenetic Changes

3.1 DNA Methylation	589
---------------------	-----

3.2 Histone Modifications	590
---------------------------	-----

3.3 Small RNA-Mediated Events	590
-------------------------------	-----

36. Transgenerational Effects Caused by Other Mutagens

5. Conclusions and Outlook	593
----------------------------	-----

Glossary	594
----------	-----

List of Abbreviations	594
-----------------------	-----

References	594
------------	-----

35. Genomic Instability and the Spectrum of Response to Low Radiation Doses

C. Mothersill and C. Seymour

1. Introduction to Low Radiation–Dose Effects

1.1 Background to the Controversy	601
-----------------------------------	-----

1.2 Epidemiology Is a Blunt Tool	601
----------------------------------	-----

1.3 Targeted and Nontargeted Effects	602
--------------------------------------	-----

1.4 Genomic Instability	603
-------------------------	-----

1.5 Bystander Effects	603
-----------------------	-----

1.6 Adaptive/Hormetic Effects	604
-------------------------------	-----

1.7 Generic Stress Responses	605
------------------------------	-----

2. Concept of Uncertainty

2.1 Spectrum of Effects	605
-------------------------	-----

2.2 Spectrum of Responses	606
---------------------------	-----

2.3 Individual Variation	606
--------------------------	-----

2.4 The Role of Genetic Background	607
------------------------------------	-----

2.5 The Role of Other Stressors	607
---------------------------------	-----

2.6 The Role of Lifestyle Factors	607
-----------------------------------	-----

2.7 Species-Sensitivity Distribution	607
--------------------------------------	-----

3. Search for Determinators

3.1 Bioindicators	608
-------------------	-----

3.2 Biomarkers	608
----------------	-----

3.3 Biosensors	608
----------------	-----

3.4 Signals	608
-------------	-----

3.5 System-Level Responses	609
----------------------------	-----

3.6 Emergent Effects	609
----------------------	-----

4. Conclusions

Glossary	609
----------	-----

List of Acronyms and Abbreviations	610
------------------------------------	-----

Acknowledgments	610
-----------------	-----

References	610
------------	-----

36. Transgenerational Genome Instability in Plants

I. Kovalchuk

1. Introduction	615
-----------------	-----

2. Genome Stability May Depend Upon the Choice of the DSB DNA-Repair Pathway	616
--	-----

3. Epigenetic Regulation of Plant Genome Stability	617		
3.1 Chromatin Structure, a Response to Stress and Genome Stability	617		
3.2 The Role of DNA Methylation in the Maintenance of Plant Genome Stability and Response to Stress	619		
3.3 The Role of Histone Modifications in the Maintenance of Genome Stability	622		
3.4 ncRNAs Are Likely Involved in the Regulation of Genome Stability and DNA Repair	623		
4. Transgenerational Responses	623		
4.1 Types of Transgenerational Effects and Possible Mechanisms of Their Appearance	623		
4.2 Transgenerational Changes in Response to Abiotic Stress	625		
4.3 Transgenerational Changes in Genome Stability, Methylation, and Stress Tolerance in Response to Biotic Stress	626		
5. Possible Mechanisms Involved in the Regulation of Transgenerational Inheritance of Stress Memory	627		
5.1 The Potential Role of DNA-Repair Factors	628		
5.2 The Role of Epigenetic Regulators	628		
6. Concluding Remarks	629		
Glossary	629		
List of Abbreviations	630		
References	630		
37. Methods for the Detection of DNA Damage			
<i>D.V. Firsanov, L.V. Solovjeva, V.M. Mikhailov and M.P. Svetlova</i>			
1. Introduction	635		
2. The Detection of DSBs in Cultivated Mammalian Cells and Tissues	636		
2.1 Phosphorylated Histone H2AX as a Marker of DSBs	636		
		2.2 Imaging of DSB Repair Proteins at Chromatin Sites Marked by γ H2AX in Cultivated Mammalian Cells	641
		3. γH2AX in Biodosimetry and Clinical Assays	643
		4. Comet Fluorescence In Situ Hybridization (Comet-FISH) in the Detection of Different Types of DNA Damage	644
		5. Methods for Studying DNA Repair After UV	644
		6. Conclusions	646
		Glossary	646
		List of Abbreviations	646
		Acknowledgments	647
		References	647
		38. Conserved and Divergent Features of DNA Repair: Future Perspectives in Genome Instability Research	
		<i>I. Kovalchuk</i>	
		1. An Overview and Comparison of DNA-Repair Pathways in Different Organisms	651
		1.1 Direct Reversal of DNA Damage	651
		1.2 Base Excision Repair	653
		1.3 Nucleotide Excision Repair	653
		1.4 Mismatch Repair	654
		1.5 Double-Strand Break Repair	654
		2. Recent Advances and Future Directions in DNA Repair	656
		2.1 The Remaining Questions in MMR	656
		2.2 The Remaining Questions in DSBs Repair	658
		3. Future Directions in Research on DNA Repair, Genome Stability, and Cancer	660
		4. Future Perspectives in DNA-Editing Technologies	662
		Glossary	663
		List of Abbreviations	663
		References	664
		Index	667
