Preface	xiii
<b>I Quantum-statistical self-consistent field models</b>	<b>1</b>
<b>1 The generalized Thomas-Fermi model</b>	<b>3</b>
1.1 The Thomas-Fermi model for matter with given temperature and density . . . . .	4
1.1.1 The Fermi-Dirac statistics for systems of interacting particles . . . . .	4
1.1.2 Derivation of the Poisson-Fermi-Dirac equation for the atomic potential . . . . .	7
1.1.3 Formulation of the boundary value problem . . . . .	9
1.1.4 The Thomas-Fermi potential as a solution of the Poisson equation depending on only two variables . . . . .	10
1.1.5 Basic properties of the Fermi-Dirac integrals . . . . .	11
1.1.6 The uniform free-electron density model . . . . .	13
1.1.7 The Thomas-Fermi model at temperature zero . . . . .	15
1.2 Methods for the numerical integration of the Thomas-Fermi equation	16
1.2.1 The shooting method . . . . .	16
1.2.2 Linearization of the equation and a difference scheme . . . . .	19
1.2.3 Double-sweep method with iterations . . . . .	20
1.3 The Thomas-Fermi model for mixtures . . . . .	22
1.3.1 Setting up of the problem. Thermodynamic equilibrium condition . . . . .	22
1.3.2 Linearization of the system of equations . . . . .	23
1.3.3 Iteration scheme and the double-sweep method . . . . .	24
1.3.4 Discussion of computational results . . . . .	27

<b>2</b>	<b>Electron wave functions in a given potential</b>	<b>29</b>
2.1	Description of electron states in a spherical average atom cell . . .	29
2.1.1	Classification of electron states within the average atom cell	30
2.1.2	Model of an atom with average occupation numbers . . . . .	33
2.1.3	Derivation of the expression for the electron density by means of the semiclassical approximation for wave functions . . . . .	35
2.1.4	Average degree of ionization . . . . .	39
2.1.5	Corrections to the Thomas-Fermi model . . . . .	41
2.2	Bound-state wave functions . . . . .	42
2.2.1	Numerical methods for solving the Schrödinger equation . .	43
2.2.2	Hydrogen-like and semiclassical wave functions . . . . .	43
2.2.3	Relativistic wave functions . . . . .	50
2.3	Continuum wave functions . . . . .	58
2.3.1	The Schrödinger equation . . . . .	58
2.3.2	The Dirac equations . . . . .	61
<b>3</b>	<b>Quantum-statistical self-consistent field models</b>	<b>65</b>
3.1	Quantum-mechanical refinement of the generalized Thomas-Fermi model for bound electrons . . . . .	66
3.1.1	The Hartree self-consistent field for an average atom . . . . .	66
3.1.2	Computational algorithm . . . . .	68
3.1.3	Analysis of computational results for iron . . . . .	72
3.1.4	The relativistic Hartree model . . . . .	76
3.2	The Hartree-Fock self-consistent field model for matter with given temperature and density . . . . .	80
3.2.1	Variational principle based on the minimum condition for the grand thermodynamic potential . . . . .	80
3.2.2	The self-consistent field equation in the Hartree-Fock approximation . . . . .	83
3.2.3	The Hartree-Fock equations for a free ion . . . . .	86
3.3	The modified Hartree-Fock-Slater model . . . . .	92
3.3.1	Semiclassical approximation for the exchange interaction . .	92
3.3.2	The equations of the Hartree-Fock-Slater model . . . . .	96
3.3.3	The equations of the Hartree-Fock-Slater model in the case when the semiclassical approximation is used for continuum electrons . . . . .	99
3.3.4	The thermodynamic consistency condition . . . . .	103

<b>4</b>	<b>The Hartree-Fock-Slater model for the average atom</b>	<b>107</b>
4.1	The Hartree-Fock-Slater system of equations in a spherical cell . . .	107
4.1.1	The Hartree-Fock-Slater field . . . . .	107
4.1.2	Periodic boundary conditions in the average spherical cell approximation . . . . .	111
4.1.3	The electron density and the atomic potential in the Hartree-Fock-Slater model with bands . . . . .	114
4.1.4	The relativistic Hartree-Fock-Slater model . . . . .	115
4.2	An iteration method for solving the Hartree-Fock-Slater system of equations . . . . .	117
4.2.1	Algorithm basics . . . . .	117
4.2.2	Computation of the band structure of the energy spectrum	118
4.2.3	Computational results . . . . .	120
4.2.4	The uniform-density approximation for free electrons in the case of a rarefied plasma . . . . .	122
4.3	Solution of the Hartree-Fock-Slater system of equations for a mixture of elements . . . . .	123
4.3.1	Problem setting . . . . .	123
4.3.2	Iteration scheme . . . . .	125
4.3.3	Examples of computations . . . . .	129
4.4	Accounting for the individual states of ions . . . . .	131
4.4.1	Density functional of the electron system with the individual states of ions accounted for . . . . .	132
4.4.2	The Hartree-Fock-Slater equations of the ion method in the cell and plasma approximations . . . . .	134
4.4.3	Wave functions and energy levels of ions in a plasma . . . .	138
<b>II</b>	<b>Radiative and thermodynamical properties of high-temperature dense plasma</b>	<b>143</b>
<b>5</b>	<b>Interaction of radiation with matter</b>	<b>145</b>
5.1	Radiative heat conductivity of plasma . . . . .	146
5.1.1	The radiative transfer equation . . . . .	146
5.1.2	The diffusion approximation . . . . .	150
5.1.3	The Rosseland mean opacity . . . . .	154
5.1.4	The Planck mean. Radiation of an optically thin layer . . .	155

5.2	Quantum-mechanical expressions for the effective photon absorption cross-sections . . . . .	156
5.2.1	Absorption in spectral lines . . . . .	156
5.2.2	Photoionization . . . . .	164
5.2.3	Inverse bremsstrahlung . . . . .	168
5.2.4	Compton scattering . . . . .	170
5.2.5	The total absorption cross-section . . . . .	171
5.3	Peculiarities of photon absorption in spectral lines . . . . .	172
5.3.1	Probability distribution of excited ion states . . . . .	172
5.3.2	Position of spectral lines . . . . .	174
5.3.3	Atom wave functions and addition of momenta . . . . .	176
5.4	Shape of spectral lines . . . . .	183
5.4.1	Doppler effect . . . . .	184
5.4.2	Electron broadening in the impact approximation . . . . .	185
5.4.3	The nondegenerate case . . . . .	186
5.4.4	Accounting for degeneracy . . . . .	194
5.4.5	Methods for calculating radiation and electron broadening . . . . .	198
5.4.6	Ion broadening . . . . .	205
5.4.7	The Voigt profile . . . . .	213
5.4.8	Line profiles of a hydrogen plasma in a strong magnetic field . . . . .	214
5.5	Statistical method for line-group accounting . . . . .	219
5.5.1	Shift and broadening parameters of spectral lines in plasma . . . . .	220
5.5.2	Fluctuations of occupation numbers in a dense hot plasma . . . . .	226
5.5.3	Statistical description of overlapping multiplets . . . . .	228
5.5.4	Effective profile for a group of lines . . . . .	238
5.5.5	Statistical description of the photoionization process . . . . .	243
5.6	Computational results for Rosseland mean paths and spectral photon-absorption coefficients . . . . .	245
5.6.1	Comparison of the statistical method with detailed computation . . . . .	245
5.6.2	Dependence of the absorption coefficients on the element number, temperature and density of the plasma . . . . .	250
5.6.3	Spectral absorption coefficients . . . . .	259
5.6.4	Radiative and electron heat conductivity . . . . .	265
5.6.5	Databases of atomic data and spectral photon absorption coefficients . . . . .	266

5.7	Absorption of photons in a plasma with nonequilibrium radiation field . . . . .	267
5.7.1	Basic processes and relaxation times . . . . .	268
5.7.2	Joint consideration of the processes of photon transport and level kinetics of electrons . . . . .	271
5.7.3	Average-atom approximation . . . . .	272
5.7.4	Rates of radiation and collision processes . . . . .	274
5.7.5	Radiation properties of a plasma with nonequilibrium radiation field . . . . .	277
5.7.6	Radiative heat conductivity of matter for large gradients of temperature and density . . . . .	280
<b>6</b>	<b>The equation of state</b>	<b>285</b>
6.1	Description of thermodynamics of matter based on quantum-statistical models . . . . .	286
6.1.1	Formulas for the pressure, internal energy and entropy according to the Thomas-Fermi model . . . . .	286
6.1.2	Quantum, exchange and oscillation corrections to the Thomas-Fermi model . . . . .	294
6.2	The ionization equilibrium method . . . . .	300
6.2.1	The Gibbs distribution for the atom cell . . . . .	300
6.2.2	The Saha approximation . . . . .	301
6.2.3	An iteration scheme for solving the system of equations of ionization equilibrium . . . . .	303
6.2.4	Coronal equilibrium . . . . .	305
6.3	Thermodynamic properties of matter in the Hartree-Fock-Slater model . . . . .	307
6.3.1	Electron thermodynamic functions . . . . .	309
6.3.2	Accounting for the thermal motion of ions in the charged hard-sphere approximation . . . . .	314
6.3.3	Effective radius of the average ion . . . . .	317
6.3.4	On methods for deriving wide-range equations of state . . . . .	318
6.4	Computational results . . . . .	319
6.4.1	General description . . . . .	319
6.4.2	Cold compression curves . . . . .	322
6.4.3	Shock adiabats . . . . .	324
6.4.4	Comparison with the Saha model . . . . .	327
6.5	Approximation of thermophysical-data tables . . . . .	330
6.5.1	Construction of an approximating spline that preserves geometric properties of the initial function . . . . .	331
6.5.2	Numerical results . . . . .	334

### III APPENDIX Methods for solving the Schrödinger and Dirac equations 337

<b>ANALYTIC METHODS</b>	<b>339</b>
A.1 Quantum mechanical problems that can be solved analytically . . .	339
A.1.1 Equations of hypergeometric type . . . . .	339
A.1.2 Bound state wave functions and classical orthogonal polynomials . . . . .	343
A.1.3 Solution of the Schrödinger equation in a central field . . . .	345
A.1.4 Radial part of the wave function in a Coulomb field . . . .	347
A.2 Solution of the Dirac equation for the Coulomb potential . . . . .	355
A.2.1 The system of equations for the radial parts of the wave functions . . . . .	356
A.2.2 Reduction of the system of equations for the radial functions to an equation of hypergeometric type . . . . .	359
A.2.3 Equations of hypergeometric type for the bound states and their solution . . . . .	362
A.2.4 Energy levels and radial functions . . . . .	365
A.2.5 Connection with the nonrelativistic theory . . . . .	367
<b>APPROXIMATION METHODS</b>	<b>371</b>
A.3 The variational method and the method of the trial potential . . .	371
A.3.1 Main features of the variational method . . . . .	371
A.3.2 Calculation of hydrogen-like wave functions . . . . .	374
A.3.3 Method of the trial potential for the Schrödinger and Dirac equations . . . . .	377
A.4 The semiclassical approximation . . . . .	380
A.4.1 Semiclassical approximation in the one-dimensional case . .	380
A.4.2 Application of the WKB method to an equation with singularity. Semiclassical approximation for a central field .	387
A.4.3 The Bohr-Sommerfeld quantization rule . . . . .	388
A.4.4 Using the semiclassical approximation to normalize the continuum wave functions . . . . .	391

**NUMERICAL METHODS** **392**

A.5 The phase method for calculating energy eigenvalues and wave functions . . . . . 392

    A.5.1 Equation for the phase and the connection with the semiclassical approximation . . . . . 392

    A.5.2 Construction of an iteration scheme for the calculation of eigenvalues . . . . . 394

    A.5.3 Difference schemes for calculating radial functions . . . . . 399

    A.5.4 The radial functions near zero and for large values of  $r$  . . . . 401

    A.5.5 Computational results . . . . . 403

    A.5.6 The phase method for the Dirac equation . . . . . 406

**Bibliography** **409**

**Index** **427**
