#### PART ONE From the Uncertainty Relation to Many-Body Systems

1.	Quantum Mechanics of Point Particles					
	1.1	Limit	ations of Classical Physics	4		
	1.2	Heise	nberg's Uncertainty Relation for Position and Momentum	16		
		1.2.1	Uncertainties of Observables	17		
		1.2.2	Quantum Mechanical Uncertainties			
			of Canonically Conjugate Variables	20		
		1.2.3	Examples for Heisenberg's Uncertainty Relation	24		
	1.3	The P	Particle-Wave Dualism	26		
		1.3.1	The Wave Function and its Interpretation	28		
		1.3.2	A First Link to Classical Mechanics	31		
		1.3.3	Gaussian Wave Packet	32		
		1.3.4	Electron in External Electromagnetic Fields	35		
	1.4	Schrö	dinger Equation and Born's Interpretation			
		of the	Wave Function	39		
	1.5	Expec	tation Values and Observables	45		
		1.5.1	Observables as Self-Adjoint Operators on $L^2(\mathbb{R}^3)$	47		
		1.5.2	Ehrenfest's Theorem	50		
	1.6	A Dis	crete Spectrum: Harmonic Oscillator in one Dimension.	53		
	1.7	Ortho	gonal Polynomials in One Real Variable	65		
	1.8	Obser	vables and Expectation Values	72		
		1.8.1	Observables With Nondegenerate Spectrum	72		
		1.8.2	An Example: Coherent States	77		
		1.8.3	Observables with Degenerate, Discrete Spectrum	81		
		1.8.4	Observables with Purely Continuous Spectrum	86		
	1.9	Centra	al Forces and the Schrödinger Equation	91		
		1.9.1	The Orbital Angular Momentum:			
			Eigenvalues and Eigenfunctions	91		
		1.9.2	Radial Momentum and Kinetic Energy	101		
		1.9.3	Force Free Motion with Sharp Angular Momentum	104		
		1.9.4	The Spherical Oscillator	111		
		1.9.5	Mixed Spectrum: The Hydrogen Atom	118		
2.	Scat	ttering	of Particles by Potentials			
	2.1	Macro	oscopic and Microscopic Scales	129		
	2.2	Scatte	ring on a Central Potential	131		
	4.2	Th		126		

2.3	Partial Wave Analysis	136
	2.3.1 How to Calculate Scattering Phases	140
	2.3.2 Potentials with Infinite Range: Coulomb Potential	144
2.4	Born Series and Born Approximation	147
	2.4.1 First Born Approximation	150
	2.4.2 Form Factors in Elastic Scattering	152
2.5	*Analytical Properties of Partial Wave Amplitudes	156

				157
		2.5.1	Jost Functions	158
		2.5.2	Dynamic and Kinemanic Cuis	161
		2.5.3	Partial Wave Amplitudes as Analytic Functions	161
		2.5.4	Resonances	164
		2.5.5	Scattering Length and Effective Kange	167
	2.6	Inelast	ic Scattering and Farnal wave Analysis	
2.	The	Princip	ples of Ouantum Theory	
	31	Renres	sentation Theory	171
	5.1	311	Dirac's Bracket Notation	174
		3.1.2	Transformations Relating Different Representations	177
	3.2	The C	oncept of Hilbert Space	180
		3.2.1	Definition of Hilbert Spaces	182
		3.2.2	Subspaces of Hilbert Spaces	187
		3.2.3	Dual Space of a Hilbert Space and Dirac's Notation	188
	3.3	Linear	· Operators on Hilbert Spaces	190
		3.3.1	Self-Adjoint Operators	191
		3.3.2	Projection Operators	194
		3.3.3	Spectral Theory of Observables	196
		3.3.4	Unitary Operators	200
		3.3.5	Time Evolution of Quantum Systems	202
	3.4	Quant	um States	203
		3.4.1	Preparation of States	204
		3.4.2	Statistical Operator and Density Matrix	207
		3.4.3	Dependence of a State on Its History	210
		3.4.4	Examples for Preparation of States	213
	3.5	A Firs	St Summary	214
	3.0	Doth I	Integrale	218
	5.7	371	The Action in Classical Machanics	210
		372	The Action in Quantum Mechanics	220
		3.7.3	Classical and Quantum Paths	224
4.	Spa	ce-Tim	e Symmetries in Quantum Physics	227
	4.1	The R	Contation Group (Part 1)	227
		4.1.1	Benerators of the Rotation Group	221
		4.1.2	The Detection Materices D	230
		4.1.5	Examples and Some Formulae for D Matrices	230
		4.1.4	Spin and Magnatic Moment of Particles with i = 1/2	230
		416	Spin and Magnetic Monich of Fatteres with $j = 1/2 \dots$ Clebsch-Gordan Series and Coupling	2.59
		4.1.0	of Angular Momenta	242
		4.1.7	Spin and Orbital Wave Functions	245
		4.1.8	Pure and Mixed States for Spin 1/2	246
	4.2	Space	Reflection and Time Reversal in Quantum Mechanics	248
		4.2.1	Space Reflection and Parity	248
		4.2.2	Reversal of Motion and of Time	251
		4.2.3	Concluding Remarks on T and $\Pi$	255
	4.3	Symm	etry and Antisymmetry of Identical Particles	258
		4.3.1	Two Distinct Particles in Interaction	258
		4.3.2	Identical Particles with the Example $N = 2$	261
		4.3.3	Extension to N Identical Particles	265
		4.3.4	Connection between Spin and Statistics	266

the second se

5.	Applications of Quantum Mechanics					
	5.1	Corre	lated States and Quantum Information	271		
		5.1.1	Nonlocalities, Entanglement, and Correlations	272		
		5.1.2	Entanglement, More General Considerations	278		
		5.1.3	Classical and Quantum Bits	281		
	5.2	Statio	nary Perturbation Theory	285		
		5.2.1	Perturbation of a Nondegenerate Energy Spectrum	285		
		5.2.2	Perturbation of a Spectrum with Degeneracy	289		
		5.2.3	An Example: Stark Effect	290		
		5.2.4	Two More Examples: Two-State System,			
			Zeeman-Effect of Hyperfine Structure in Muonium	293		
	5.3	Time	Dependent Perturbation Theory			
		and T	ransition Probabilities	300		
		5.3.1	Perturbative Expansion			
			of Time Dependent Wave Function	301		
		5.3.2	First Order and Fermi's Golden Rule	304		
	5.4	Statio	nary States of N Identical Fermions	306		
		5.4.1	Self Consistency and Hartree's Method	306		
		5.4.2	The Method of Second Quantization	308		
		5.4.3	The Hartree-Fock Equations	311		
		5.4.4	Hartree-Fock Equations and Residual Interactions	314		
		5.4.5	Particle and Hole States, Normal Product			
			and Wick's Theorem	317		
		5.4.6	Application to the Hartree-Fock Ground State	320		

#### PART TWO

## From Symmetries in Quantum Physics to Electroweak Interactions

### 6. Symmetries and Symmetry Groups in Quantum Physics

6.1	Actior	1 of Symmetries and Wigner's Theorem	328		
	6.1.1	Coherent Subspaces of Hilbert Space			
		and Superselection Rules	329		
	6.1.2	Wigner's Theorem	332		
6.2	The R	Rotation Group (Part 2)	335		
	6.2.1	Relationship between $SU(2)$ and $SO(3)$	336		
	6.2.2	The Irreducible Unitary Representations of SU(2)	340		
	6.2.3	Addition of Angular Momenta			
		and Clebsch-Gordan Coefficients	350		
	6.2.4	Calculating Clebsch-Gordan Coefficients; the 3j-Symbols .	356		
	6.2.5	Tensor Operators and Wigner-Eckart Theorem	359		
	6.2.6	*Intertwiner, 6j- and 9j-Symbols	365		
	6.2.7	Reduced Matrix Elements in Coupled States	373		
	6.2.8	Remarks on Compact Lie Groups			
		and Internal Symmetries	377		
6.3	Lorentz- and Poincaré Groups				
	6.3.1	The Generators of the Lorentz and Poincaré Groups	381		
	6.3.2	Energy-Momentum, Mass and Spin	387		
	6.3.3	Physical Representations of the Poincaré Group	388		
	6.3.4	Massive Single-Particle States and Poincaré Group	394		
~	42.001				

<i>l</i> •	Quantized Fields and their interpretation		
	7.1	The Klein-Gordon Field	399

	711	The Covariant Normalization	404
	7.1.1	A Comment on Physical Units	405
	7.1.2	Solutions of the Klein-Gordon Equation	
	1.1.5	for Fixed Four Momentum	408
	714	Our Fixed Four-Wolfenham Field	410
	7.1.4	Quantization of the Real Annihilation Operators	413
	7.1.5	Normal Modes, Creation and Animitation Operator	420
	7.1.6	Commutator for Different Times, Propagator	.125
7.2	The C	omplex Klein-Gordon Field	120
7.3	The Q	uantized Maxwell Field	432
	7.3.1	Maxwell's Theory in the Lagrange Formalism	432
	7.3.2	Canonical Momenta, Hamilton- and Momentum Densities	430
	7.3.3	Lorenz- and Transversal Gauges	437
	7.3.4	Quantization of the Maxwell Field	440
	7.3.5	Energy, Momentum, and Spin of Photons	443
	736	Helicity and Orbital Angular Momentum of Photons	444
74	Intera	ction of the Quantum Maxwell Field with Matter	449
/.4	7/1	Many-Photon States and Matrix Elements	449
	717	Absorption and Emission of Single Photons	451
	7.7.2	Payleigh, and Thomson Scattering	457
76	Covori	Cart Quantization of the Maxwell Field	463
1.5		Cruss Eiving and Quantization	463
	7.5.1	Value Fixing and Quantization	466
	1.5.2	Normal Modes and One-Floton States	400
	1.5.3	Lorenz Condition, Energy and Momentum	167
_ /	4.000	of the Radiation Field	407
7.6	*The S	state Space of Quantum Electrodynamics	470
	7.6.1	*Field Operators and Maxwell's Equations	470
