

Contents

1. Discovery of the Quantum Hall Effect	1
1.1 Realization of Two-Dimensional Electron Systems	1
1.1.1 Si MOS Systems and GaAs-AlGaAs Heterojunctions .	1
1.1.2 Surface of Liquid Helium	6
1.2 The Quantum Hall Effect	7
1.2.1 Diagonal and Hall Resistances	7
1.2.2 The Discovery of the Integer Quantum Hall Effect	9
1.2.3 Discovery of the Fractional Quantum Hall Effect	13
Exercises	15
2. Two-Dimensional Electrons in a Magnetic Field	17
2.1 Electron Motion in Classical Mechanics	17
2.1.1 Motion in a Magnetic Field	17
2.1.2 Motion in the Presence of a Magnetic Field and an Electric Field	19
2.2 Motion of an Electron in Quantum Mechanics	20
2.2.1 Hamiltonian for a Free Electron	20
2.2.2 Momentum and Angular Momentum	20
2.2.3 Gauge Invariance	21
2.2.4 Landau Levels	22
2.2.5 Quantization Condition and Aharonov-Bohm Phase ..	25
2.2.6 Abrikosov Lattice	26
2.3 Electrons in External Fields	28
2.3.1 Motion in a Uniform Electric Field	28
2.3.2 Motion at the Edge of the System	29
2.4 Localization by Impurities	31
2.4.1 Anderson Localization at $B = 0$	31
2.4.2 Localization in a Strong Magnetic Field	33
Exercises	35
3. The Integer Quantum Hall Effect	37
3.1 Laughlin's Gedankenexperiment	37
3.2 Büttiker's Theory	41
3.2.1 Nonequilibrium Occupation of the Edge States	41

3.2.2	Fermi Level and Current	43
3.2.3	Behavior of Current at the Electrodes	45
3.3	Edge Current vs. Bulk Current	47
3.4	Deviations from the Quantized Value	49
3.4.1	Effect of Temperature	49
3.4.2	Breakdown due to Large Current	49
4.	The Fractional Quantum Hall Effect	53
4.1	General Considerations	53
4.1.1	Impurity Potential and Electron–Electron Interaction .	53
4.1.2	Limit of Strong Magnetic Field	55
4.1.3	Electron Hole Symmetry	55
4.1.4	Definition of the Problem	57
4.1.5	Possibility of a Wigner Crystal	57
4.2	Investigation by the Exact-Diagonalization Method	59
4.2.1	Representation of the Hamiltonian in a Matrix Form ..	59
4.2.2	Ground State	61
4.2.3	Excitation Spectrum	64
4.3	Investigation by the Variational Method	65
4.3.1	Laughlin’s Wave Function	65
4.3.2	The Filling Factor of the Landau Level	66
4.3.3	Zero Points	69
4.3.4	Exact Hamiltonian	70
4.4	Comparison Between the Exact Ground State and the Laughlin State	72
4.4.1	Comparison of the Wave Functions	72
4.4.2	Comparison of the Interactions	73
4.5	Properties of the FQHE State	74
4.5.1	Quasiparticles	74
4.5.2	Collective Excitations	77
4.5.3	Hierarchy	83
4.6	Comparison with Experiment	85
4.6.1	Fractional Quantization	85
4.6.2	Excitation Energy	86
4.6.3	Fractional Charge	88
4.7	Order Parameter and Long-Range Order	90
4.7.1	Off-Diagonal Long-Range Order	90
4.7.2	Order in the Fractional Quantum Hall Effect	91
	Exercises	94
5.	Composite-Particle Mean-Field Theory	95
5.1	Berry Phase and Statistics of Quasiparticles	95
5.1.1	Berry Phase	95
5.1.2	Anyons	98
5.1.3	Statistics of the Quasiparticles	100

5.1.4	Hierarchy Theory in Terms of Anyons	101
5.2	Composite-Boson Mean-Field Theory	102
5.3	Chern–Simons Ginzburg–Landau Theory	105
5.3.1	Ginzburg–Landau Equation	105
5.3.2	Mean-Field Solution	107
5.3.3	Properties of the Uniform Solution	108
5.4	Composite-Fermion Mean-Field Theory	112
	Exercises	115
6.	Spin and Pseudospin Freedom	117
6.1	The Ground State in the Presence of Spin Degeneracy	117
6.1.1	Halperin’s Trial Wave Function	118
6.1.2	Ferromagnetic State	119
6.1.3	Spin Singlet State	119
6.2	Excited States	122
6.2.1	Spin Waves	122
6.2.2	Quasiparticles	123
6.3	Skyrmions	125
6.3.1	Small Skyrmions	126
6.3.2	Large Skyrmions	127
6.3.3	Experimental Evidence for Skyrmions	128
6.3.4	Comparison with the Hubbard Model	129
6.4	Bilayer Systems and Pseudospin Representation	130
6.4.1	Parameters Which Specify the Bilayer	130
6.4.2	Pseudospin Representation of a Bilayer System	132
6.5	Ground State of a Bilayer System	132
6.5.1	The Case $d > 0$ and $\Delta_{SAS} = 0$	133
6.5.2	The case $d > 0$ and $\Delta_{SAS} > 0$	135
	Exercise	137
7.	Even-Denominator States	139
7.1	Anomalous Phenomena at $\nu = 1/2$	139
7.1.1	Anomaly in ρ_{xx}	139
7.1.2	Anomaly in Surface Acoustic Waves	140
7.2	Composite-Fermion Theory	142
7.3	Experimental Verification	143
7.3.1	Measurement of the Fermi Wave Number	143
7.3.2	Effective Mass	146
7.4	A Remaining Problem: the Essence of the State at $\nu = 1/2$	148
8.	Electron States at the Sample Edge	151
8.1	Edge States – Effect of the Long-Range Coulomb Interaction	151
8.1.1	Steep Confining Potential	151
8.1.2	Slowly Varying Confining Potential	153
8.2	Idealized Edge States – the Effect of Electron Correlation	155

8.2.1	Tomonaga-Luttinger Liquid	155
8.2.2	Chiral Tomonaga-Luttinger Liquid	161
8.2.3	Experimental Confirmation	169
	Exercises	171
9.	Higher Landau Levels	173
9.1	New Ground States in Higher Landau Levels	173
9.1.1	The Second Lowest Landau Level	173
9.1.2	The Third Lowest and Higher Landau Levels	175
9.2	The Hamiltonian in Higher Landau Levels	176
9.3	Pair States	178
9.3.1	New Ingredients: Spin Degree of Freedom and Pairing	178
9.3.2	Spin Singlet Pair State	179
9.3.3	Pairing of Spin-Polarized Fermions	179
9.3.4	Ground State at $\nu = 5/2$	181
9.4	Charge Density Wave States	181
9.4.1	Mean-Field Theory of the CDW States	181
9.4.2	Exact-Diagonalization and DMRG Studies of the CDW States	185
	Exercises	187
	Answers to Exercises	189
