Preface **xi**

1 Basic properties of holomorphic functions **1**
1.1 Number systems . . . 1
1.1.1 Real Clifford numbers . . . 1
1.1.2 Quaternion algebra . . . 4
1.1.3 On rotations . . . 5
1.1.4 Complex quaternions . . . 7
1.1.5 Clifford's geometric algebra . . . 7
1.1.6 The $\pm$ split with respect to two square roots of -1 . . . 11
1.1.7 Bicomplex numbers . . . 15
1.2 Classical function spaces in quaternions . . . 16
1.3 New types of holomorphic functions . . . 18
1.3.1 Definitions . . . 18
1.3.2 Construction of holomorphic functions . . . 21
1.4 Integral theorems . . . 23
1.4.1 General integral theorems . . . 23
1.4.2 Integral theorems for holomorphic functions . . . 25
1.5 Polynomial systems . . . 28
1.5.1 Fueter polynomials . . . 29
1.5.2 Holomorphic Appell polynomials . . . 33
1.5.3 Holomorphic polynomials for the Riesz system . . . 34
1.5.4 Orthogonal polynomials in $\mathbb{H}$ . . . 39
1.5.5 Series expansions . . . 39

2 Conformal and quasi-conformal mappings **43**
2.1 Möbius transformations . . . 43
2.1.1 Schwarzian derivative . . . 44
2.2 Conformal mappings . . . 45
2.2.1 Conformal mappings in the plane . . . 46
2.2.2 Conformal mappings in space . . . 47
2.2.3 Mercator projection . . . 52

Gürlebeck, Klaus 1954- (DE-588)1015214991 Verfasser aut
Application of holomorphic functions in two and higher ...

Schweizerischen Nationalbibliothek

2.3 Quasi-conformal mappings 53
2.3.1 Basic definitions 53
2.3.2 Quaternionic quasi-conformal mappings 56
2.4 M-conformal mappings 59
2.4.1 Characterization of M-conformal mappings 60
2.4.2 M-conformal mappings in a plane 70
2.4.3 M-conformal mappings of curves on the unit sphere 72

3 Function theoretic function spaces **75**
3.1 $\mathbf{Q}_p$-spaces 75
3.2 Properties of $\mathbf{Q}_p$-spaces 78
3.3 Another characterization of $\mathbf{Q}_p$-spaces 82
3.4 Bergman and Hardy spaces 89
3.4.1 Bergman space 89
3.4.2 Hardy space 91
3.5 Riesz potentials 93

4 Operator calculus **95**
4.1 Teodorescu transform and its left inverse 95
4.1.1 Historical prologue 95
4.1.2 Borel–Pompeiu formula 96
4.2 On generalized Π-operators 100
4.2.1 The complex Π-operator 100
4.2.2 Shevchenko's generalization 102
4.2.3 A generalization via the Teodorescu transform 103
4.2.4 The second generalization of the Π-operator 111
4.2.5 The third generalization of the Π-operator 114
4.2.6 The special case of quaternions 117
4.3 A general operator approach to holomorphy 119
4.3.1 A general holomorphy 120
4.3.2 Types of L-holomorphy 122
4.3.3 Taylor type formula 128
4.3.4 Taylor–Gontcharov formula for generalized Dirac operators of higher order 131
4.4 A modified operator calculus in the plane 131
4.4.1 Modified Borel–Pompeiu type formulas 132
4.4.2 Modified Plemelj–Sokhotski formulas 134
4.4.3 A modified Dirichlet problem 135
4.4.4 A norm estimate for the modified Teodorescu transform . . 137
4.5 Modified operator calculus in space 139
4.5.1 Modified fundamental solutions 139
4.5.2 A modified Borel–Pompeiu formula 142
4.6 Operator calculus on the sphere 144
4.6.1 Gegenbauer functions 144

4.6.2 Spherical harmonics 145
4.6.3 Borel–Pompeiu formula 149

5 Decompositions **151**
5.1 Vector fields in Euclidean space 151
5.1.1 Helmholtz decomposition 151
5.1.2 Associated boundary value problems 154
5.1.3 Original Hodge decomposition theorem 155
5.2 Bergman–Hodge decompositions 156
5.2.1 Suitable fundamental solutions 157
5.2.2 An orthogonal decomposition formula with complex potential 159
5.2.3 Generalized Bergman–Hodge decomposition 162
5.2.4 Decompositions in domains on the unit sphere 162
5.3 Representations of functions by holomorphic generators 164
5.3.1 Almansi decomposition 164
5.3.2 Fischer decomposition 166

6 Some first-order systems of partial differential equations **169**
6.1 Maxwell equations 169
6.1.1 A brief historical review 169
6.1.2 Stationary Maxwell equations 172
6.1.3 Stationary Maxwell equations with variable permitivities . 173
6.2 Bers-Vekua systems 175
6.2.1 History of the Vekua equation 175
6.2.2 Pseudoanalytic functions 177
6.2.3 Generating sequences and formal powers 179
6.2.4 An important special case 181
6.2.5 Orthogonal coordinates and explicit generating sequences . 182
6.2.6 Completeness of the systems of formal powers 184
6.2.7 Factorization of second-order operators in the plane 185
6.2.8 Complete systems of solutions for the stationary Schrödinger equation and their applications 188
6.2.9 The Riccati equation in two dimensions 190
6.2.10 On the solution of the Riccati equation 191
6.2.11 Factorization in the hyperbolic case 194
6.3 Biquaternions and factorization of spatial models 195
6.3.1 Biquaternionic Vekua-type equations from physics 195
6.3.2 Factorization of the 3D-Schrödinger operator and the main biquaternionic Vekua equation 197

7 Boundary value problems for second-order partial differential equations **203**
7.1 p-harmonicity 203
7.1.1 Poisson equation 203
7.1.2 p-harmonic functions 207

7.2 A class of non-linear boundary value problems 208
7.3 Helmholtz equation 210
7.3.1 Motivation and historical note 210
7.3.2 Square roots of the Helmholtz operator 212
7.4 Yukawa's equation 219
7.4.1 An operator theory 219
7.5 Equations of linear elasticity 222
7.5.1 Stress 222
7.5.2 Deformation 226
7.5.3 Solution theory for the stationary problem 230
7.5.4 Kolosov-Muskhelishvili formulas 232
7.5.5 Fundamentals of the linear theory of elasticity 234
7.5.6 General solution of Papkovic-Neuber 236
7.5.7 The representation theorem of Goursat in $\mathbb{H}$ 237
7.5.8 Spatial Kolosov-Muskhelishvili formulas in $\mathbb{H}$ 239
7.5.9 Generalized Kolosov-Muskhelishvili formulas for stresses . . 241
7.6 Transmission problems in linear elasticity 247
7.6.1 Boundary value problems in multiply connected domains . 248
7.6.2 Solution of the transmission problem 250
7.6.3 Transmission problems for the Lamé system 254
7.7 Stationary fluid flow problems 254
7.7.1 A brief history of fluid dynamics 254
7.7.2 Stationary linear Stokes problem 255
7.7.3 Non-linear Stokes equations 256
7.7.4 Stationary Navier-Stokes problem 257
7.7.5 Stationary equations of thermo-fluid dynamics 258
7.7.6 Stationary magneto-hydromechanics 259

8 Some initial-boundary value problems 265
8.1 Rothe's method 266
8.2 Stokes equation 267
8.3 Galpern-Sobolev equations 269
8.3.1 Description of the problem 270
8.3.2 Quaternionic integral operators 273
8.3.3 A representation formula 274
8.4 The Poisson-Stokes problem 276
8.4.1 Semi–discretization 278
8.4.2 Operator decomposition 280
8.4.3 Representation formulas 280
8.5 Higher dimensional versions of Korteweg-de Vries' and Burgers' equation 282
8.5.1 Multidimensional version of Burgers equation 282
8.5.2 Airy's equation 283
8.5.3 A quaternionic Korteweg-de Vries-Burgers equation 287

8.6 Solving the Maxwell equations 288
8.7 Alternative treatment of parabolic problems 290
8.7.1 The Witt basis approach 290
8.7.2 Harmonic extension method 292
8.8 Fluid flow through porous media 294
8.8.1 Governing equations 294
8.8.2 Representation in a quaternionic operator calculus 295
8.8.3 Error analysis 300

9 Riemann-Hilbert problems **303**
9.1 Riemann-Hilbert problem in the plane 303
9.2 Riemann-Hilbert problems in $C\ell(3,0)$ 307
9.2.1 Plemelj formula for functions with a parameter 308
9.2.2 Riemann boundary value problem for harmonic functions . 316
9.2.3 Riemann boundary value problem for biharmonic functions 317

10 Initial-boundary value problems on the sphere **319**
10.1 Forecasting equations 319
10.1.1 Forecasting equations – a physical description 319
10.1.2 Toroidal flows on the sphere 321
10.1.3 Tangential derivatives 322
10.1.4 Oseen's problem on the sphere 323
10.1.5 Forecasting equations in a ball shell 325
10.2 Viscous shallow water equations 326

11 Fourier transforms **329**
11.1 Hypercomplex Fourier transforms 329
11.1.1 Introduction 329
11.1.2 General two-sided Clifford Fourier transforms 330
11.1.3 Properties of the general two-sided CFT 331
11.1.4 Fourier transforms in quaternions 334
11.1.5 Clifford Fourier-Mellin transform 340
11.1.6 Clifford–Fourier transforms with pseudoscalar square roots of -1 341
11.1.7 Spacetime Fourier transform 343
11.1.8 Summary 345
11.2 Fractional Fourier transform 346
11.2.1 Exponentials of the Dirac operator 346
11.2.2 Fourier transform of fractional order 348
11.3 Radon transforms 351
11.3.1 A basic problem 351
11.3.2 At the very beginning 351
11.3.3 Passing to higher dimensions 352
11.3.4 Derivatives 352

11.3.5 Relation to the Fourier transform 353
11.3.6 Radon transform and spherical means 354
11.3.7 Inversion formula for radial functions 355
11.3.8 Relation to the Hilbert transform 356
11.3.9 Radon transform on SO(3) 356
