<b>Series Editors' Introduction</b>	ix
<b>Preface</b>	xi
<b>1 Overview</b>	1
1.1 Introduction	1
1.2 Describing the Events	2
1.3 Using the Event Indicators ("States")	10
1.4 Prediction of Recurrent Events	12
1.5 Conclusion	13
<b>2 Methods for Describing Oscillations, Fluctuations, and Cycles in Univariate Series</b>	15
2.1 Introduction	15
2.2 Types of Movements in Real and Financial Series	16
2.3 Prescribed Rules for Dating Business Cycles	26
2.4 Prescribed Rules for Dating Other Types of Real Cycles	38
2.5 Prescribed Rules for Dating Financial Cycles	40
2.6 Relations between Cycles and Oscillations	41
2.7 The Nature of $S_t$ and Its Modeling	45
2.8 Conclusion	50

<b>3</b>	<b>Constructing Reference Cycles with Multivariate Information</b>	51
3.1	Introduction	51
3.2	Determining the Reference Cycle via Phases	52
3.3	Combining Specific Cycle Turning Points	54
3.4	Finding Turning Points by Series Aggregation	60
3.5	Conclusion	61
<b>4</b>	<b>Model-Based Rules for Describing Recurrent Events</b>	62
4.1	Introduction	62
4.2	Dating Cycles with Univariate Series	63
4.3	Model-Based Rules for Dating Events with Multivariate Series	82
4.4	Conclusion	85
<b>5</b>	<b>Measuring Recurrent Event Features in Univariate Data</b>	86
5.1	Introduction	86
5.2	The Fraction of Time Spent in Expansions	87
5.3	Representing the Features of Phases	89
5.4	Amplitudes and Durations of Phases	90
5.5	The Shapes of Phases	94
5.6	The Diversity of Phases	99
5.7	Plucking Effects and Recovery Times	100
5.8	Duration Dependence in Phases	101
5.9	Conclusion	106
<b>6</b>	<b>Measuring Synchronization of Recurrent Events in Multivariate Data</b>	107
6.1	Introduction	107
6.2	Moment-Based Measures	108
6.3	Other Approaches to Measuring Synchronization	115
6.4	Synchronization and Model-Based Rules	116

6.5	Application to Synchronization of Industrial Production Cycles	116
6.6	Multivariate Synchronization	118
6.7	Comovement of Cycles	119
6.8	Conclusion	121
<b>7</b>	<b>Accounting for Observed Cycle Features with a Range of Statistical Models</b>	122
7.1	Introduction	122
7.2	U.S. Cycles as a Benchmark	123
7.3	The Business Cycle in a Range of Countries	129
7.4	Can U.S. Business Cycles Be Generated by Linear Models?	129
7.5	What Do Non-Linear Models Add?	132
7.6	Two Markov Switching Models	137
7.7	Using the Binary Indicators in Multivariate Systems	138
7.8	Conclusion	142
<b>8</b>	<b>Using the Recurrent Event Binary States to Examine Economic Modeling Issues</b>	143
8.1	Introduction	143
8.2	Estimating Univariate Models with Constructed Binary Data	145
8.3	What Do Variance Decompositions Tell Us About the Cycle?	150
8.4	The Role of Structural Shocks in Determining Cycle Features	152
8.5	Financial Effects and the Business Cycle	154
8.6	Conclusion	161
<b>9</b>	<b>Predicting Turning Points and Recessions</b>	163
9.1	Introduction	163
9.2	Bounding the Probability of the Occurrence of a Peak	166
9.3	Predicting Recessions with a Range of Variables	168

9.4	Changing the Event Defining Recessions and Turning Points	182
9.5	Conclusion	184
	<b>References</b>	187
	<b>Index</b>	205
