

Buckin V:	Preface	V
	Surfactant colloids	
Romero-Cano MS, Martín-Rodríguez A, de las Nieves FJ:	Colloidal stability of a cationic latex covered with Triton X-100 ...	1
Letellier D, Cabuil V:	Dilution of 6-lauryl poly(oxyethylene ether) lamellar phases doped with magnetic nanoparticles	5
Stradner A, Glatter O, Schurtenberger P:	Hexanol-induced sphere-to-flexible-coil transition in sugar surfactant solutions: a small-angle neutron and static light scattering study ...	10
Freda M, Onori G, Santucci A:	Hydration and dynamics of bis(2-ethylhexyl)sulfosuccinate microemulsions: effect of change in counterion	15
Freda M, La Penna G, Minicozzi V, Morante S, Salina G:	Molecular dynamics and hybrid Monte Carlo simulations of a sodium bis(2-ethylhexyl)-sulfosuccinate reverse micelle	20
Giustini M, Palazzo G, Ceglie A, Eastoe J, Bumujdad A, Heenan RK:	Studies of cationic and nonionic surfactant mixed microemulsions by small-angle neutron scattering and pulsed field gradient NMR ...	25
Grosmaire L, Chorro M, Chorro C, Partyka S, Zana R:	Thermodynamics of micellization of cationic dimeric (gemini) surfactants	31
Forgiarini A, Esquena J, González C, Solans C:	Studies of the relation between phase behavior and emulsification methods with nanoemulsion formation	36
Aramaki K, Akahane A, Kunieda H:	Oil-induced phase transition from lamellar to reverse hexagonal liquid crystals in the Aerosol OT system	40
Bordi F, Cametti C, Di Biasio A:	High-frequency dielectric polarization mechanism in water-in-oil microemulsions below percolation	44
Terreros A, Galera Gomez P, Lopez-Cabarcos E:	Influence of the surfactant chain length and the molecular weight of poly(oxyethylene) on the stability of oil-in-water concentrated emulsions	50
	Polymer colloid and solid particles	
Puertas AM, Fernández-Barbero A, De las Nieves FJ:	Aggregation between oppositely charged colloidal particles	55
Stipp A, Sinn C, Palberg T, Weber I, Bartsch E:	Crystallizing polystyrene microgel colloids	59
Charnay C, Lagerge S, Partyka S:	Determination of surface heterogeneity of talc materials	66
Meziani MJ, Benalla H, Zajac J, Partyka S:	Effect of the pore size on the adsorption of dimeric cationic surfactants from aqueous solution onto aluminosilicate adsorbents with a hexagonal pore arrangement	72
Cousin F, Cabuil V:	Fluid–solid transitions in aqueous ferrofluids	77

Fernández-Barbero A, Loxley A, Vincent B:	Heteroaggregation between charged hard and soft particles	84
Stellbrink J, Allgaier J, Monkenbusch M, Richter D, Lang A, Likos CN, Watzlawek M, Löwen H, Ehlers G, Schleger P:	Neither Gaussian chains nor hard spheres – star polymers seen as ultrasoft colloids	88
Mylonas G, Bokias G, Staikos G:	Phase behaviour of aqueous mixtures of sodium dodecyl sulfate with a weakly cationically charged acrylamide-based copolymer	93
Bele M, Pejovnik S, Kočevnik K, Mušević I, Besenhard JO:	Substrate-induced deposition: molecular bridging between dispersed particles and gelatine-modified surfaces	97
Chevalier Y, Chivé A, Delfort B, Born M, Barré L, Gallo R:	The emulsification of inorganic colloidal particles in an organic medium	100
Klepetsanis PG, Kladi A, Koutsoukos PG, Amjad Z:	The interaction of water-soluble polymers with solid substrates. Implications on the kinetics of crystal growth	106
García-Salinas MJ, Romero- Cano MS, de las Nieves FJ:	Zeta potential study of a polystyrene latex with variable surface charge: influence on the electroviscous coefficient	112
Timoshenko EG, Kuznetsov Yu A:	Study of mesoglobules in solutions of amphiphilic heteropolymers . .	117
Lynch I, Gorelov AV, Dawson KA:	Systematic comparison of effect of structural and architectural changes to the network structure on the kinetics of collapse of <i>N</i> -isopropylacrylamide gels	121
Casagrande M, Heldmann C, Pawelzik U, Meier G, Stamm M:	Influence of composition on the interdiffusion of poly(vinyl acetate) latex particles	128
Fernández-Nieves A, Fernández-Barbero A, Vincent B, Nieves FJ de las:	Deswelling and depletion flocculation of microgel particles under external osmotic pressure	134
Bartlett P:	The effect of polydispersity on colloidal phase transitions	137
Pathmamanoharan C, Zuiverloon NL, Philipse AP:	Controlled (seeded) growth of monodisperse sterically stabilised magnetic iron colloids	141
Kuznetsov Yu A, Timoshenko EG:	Influence of reptations on conformations of a homopolymer in a Monte Carlo simulation	146
Tsevis A, Sotiropoulou M, Koutsoukos PG:	Preparation of titania powders in a fluidized-bed reactor	151
Food colloids		
Dimitrova TD, Leal-Calderon F:	Colloid forces in model food-type emulsions	156
Ambrosone L, Ceglie A, Colafemmina G, Palazzo G:	NMR studies of food emulsions: the dispersed-phase self-diffusion coefficient calculated by the least variance method	161
Arikainen EO:	A diffusing wave spectroscopy study of acidified milk gel under shear	166

Holzheu S, Hoffmann H:	Influence of non-ionic adsorbing substances on the anomalous Kerr effect of hectorite dispersions	265
Urban C, Romer S, Scheffold F, Schurtenberger P:	Structure, dynamics and interactions in concentrated colloidal suspensions and gels	270
Uhomoibhi JO, Dawson KA:	Light scattering studies of the long time dynamics of foam	275
Dwyer C, Allen P, Buckin V:	Temperature dependence of the ultrasonic parameters of bovine muscle: effects of muscle anisotropy	282
Kudryashov E, Smyth C, Duffy G, Buckin V:	Ultrasonic high-resolution longitudinal and shear wave measurements in food colloids: monitoring of gelation processes and detection of pathogens	287
Neto C, Berti D, Aloisi GD, Baglioni P, Larsson K:	In situ study of soft matter with atomic force microscopy and light scattering	295
Rheology		
Bichl R, Palberg T:	Assessment of shear-induced structures by real space and Fourier microscopy	300
Evers M, Palberg T, Dingenouts N, Ballauff M, Richter H, Schimmel T:	Vitrification in restricted geometry: dry films of colloidal particles	307
van der Horst BM, Langelaan HC, Gotsis AD:	Rheological studies of water-in-oil-in-water double emulsions	315
Hunt N, Buckin V:	Temperature dependence and the effects of heat treatment on the rheological properties of various butters	320
New in colloid and surfactant sciences		
Sinn C:	Acoustic spectroscopy of aerogel precursors	325
Kovalchuk NM, Kovalchuk VI, Vollhardt D:	Direct numerical simulation of the dynamic behaviour of a system with a surfactant droplet under the free water surface: theoretical consideration of the auto-oscillation of surface tension	329
Mirnik M:	Electrostatic and chemical interactions of ions in electrolytes and in ionic point-charge double layers. II	334
Hansson P, Schneider S, Lindman B:	Macroscopic phase separation in a polyelectrolyte gel interacting with oppositely charged surfactant: correlation between anomalous deswelling and microstructure	342
Sommer C, Cannavacciuolo L, Egelhaaf SU, Pedersen JS, Schurtenberger P:	Micelles as model systems for equilibrium polyelectrolytes: a light and neutron scattering study	347
Borštnik A, Stark H, Žumer S:	Temperature-induced flocculation of colloidal particles above the nematic- isotropic phase transition	353
O'Neill S, Fitzmaurice D:	Preparation and characterization of size monodisperse TiO ₂ nanocrystals and their self-assembled two- and three-dimensional arrays	357

Mallamace F, Gambadauro P, Liao C, Micali N, Tartaglia P, Chen S-H:	Effects of the short-range attraction in the kinetic glass transition studied by means of a micellar system	361
Löwen H, Allahyarov E, D'Amico I:	Effective interaction between confined colloids: repulsion or attraction?	367
Zaccarelli E, Foffi G, Tartaglia P, Sciortino F, Dawson KA:	Binary mixtures of sticky spheres using Percus-Yevick theory	371
Contents of Volume 115
