Series Editor's Preface. . . . .	xxxii
Preface . . . . .	xxxiii
<b>Sampling</b>	
<i>Chapter 1. Sampling and sample preparation for indoor air analysis. . . . .</i>	1
Jacek A. Koziel	
1.1 Indoor air quality . . . . .	1
1.1.1 Historical perspective . . . . .	1
1.1.2 Health effects or air pollutants . . . . .	2
1.1.3 Sources of indoor air pollutants . . . . .	2
1.2 Measurements of indoor air pollutants . . . . .	2
1.2.1 General considerations . . . . .	2
1.2.2 Organic pollutants . . . . .	5
1.2.3 Particulate matter . . . . .	14
1.2.4 Radon . . . . .	16
1.2.5 Asbestos . . . . .	17
1.2.6 Ozone . . . . .	18
1.2.7 Nitrogen dioxide . . . . .	19
1.2.8 Sulfur dioxide . . . . .	21
1.2.9 Carbon monoxide and carbon dioxide. . . . .	22
1.2.10 Environmental tobacco smoke . . . . .	23
1.2.11 Biological agents . . . . .	24
References . . . . .	27
<i>Chapter 2. Sampling water and aqueous solutions . . . . .</i>	33
Waldemar Wardencki and Jacek Namiesnik	
2.1 Introduction . . . . .	33
2.2 Types of samples from environmental waters. . . . .	34
2.3 General aspects of sampling of liquids. . . . .	35
2.4 Sampling techniques and equipment . . . . .	36
2.4.1 Sampling of different types of surface water . . . . .	36
2.4.2 Sampling of groundwater from small boreholes . . . . .	42
2.4.3 Sampling of unsaturated soil water. . . . .	45
2.4.4 Sampling surface layers (microfilms) of water . . . . .	46
2.4.5 Sampling of throughfall waters . . . . .	48
2.4.6 Sampling of water and vapour from closed circuits . . . . .	49
2.4.7 Sampling of piped water for determination of volatile compounds and dissolved gases . . . . .	52

2.4.8 Automatic sampling systems . . . . .	52
2.4.9 Passive water sampling . . . . .	53
2.5 General aspects of preparing water samples for analysis. . . . .	55
2.5.1 Preservation and water sample storage. . . . .	56
References . . . . .	59
<i>Chapter 3. Sampling selected solid materials . . . . .</i>	61
Bogdan Zygmunt and Jacek Namiesnik	
3.1 Introduction . . . . .	61
3.2 Property variability and its effect on sampling . . . . .	63
3.3 Samplers for greasy, doughy and fusible materials . . . . .	67
3.3.1 Greasy and doughy materials . . . . .	67
3.3.2 Fusible materials. . . . .	68
3.4 Samplers for loose and lumpy material . . . . .	69
3.5 Sampling soils. . . . .	72
3.5.1 Sampling soil profiles . . . . .	72
3.5.2 Sampling arable layers. . . . .	74
3.5.3 Sampling root layer soils . . . . .	75
3.5.4 Sampling soil from surface layers . . . . .	76
3.5.5 Soil sample preparation for analysis . . . . .	77
3.5.6 Sampling site selection . . . . .	77
3.6 Sampling biological plant materials [31] . . . . .	78
3.6.1 Sampling . . . . .	78
3.6.2 Preparing sampled material for analysis . . . . .	80
3.7 Sampling sediments . . . . .	81
3.8 Glossary . . . . .	84
References . . . . .	85
<i>Chapter 4. Analyte losses during storage . . . . .</i>	87
Barbara Zielinska and Wendy S. Goliff	
4.1 Introduction . . . . .	87
4.2 Electropolished canisters. . . . .	87
4.2.1 Hydrocarbons and halocarbons . . . . .	88
4.2.2 Oxygenated compounds . . . . .	88
4.3 Solid adsorbents . . . . .	89
4.4 Carbonyl compounds . . . . .	90
4.5 Semi-volatile organic compounds . . . . .	91
4.6 Summary . . . . .	94
References . . . . .	94
<b>Sample Matrices</b>	
<i>Chapter 5. Automated diffusion-based collection and measurement of atmospheric trace gases . . . . .</i>	97
Purnendu K Dasgupta	
5.1 Introduction . . . . .	97

5.1.1	Gases . . . . .	97
5.1.2	Aerosols . . . . .	98
5.2	Collection and analysis of trace gases . . . . .	99
5.2.1	Diffusion based collection . . . . .	99
5.2.2	Automated collection and analysis of denuder samples . . . . .	102
5.3	Diffusion scrubbers . . . . .	104
5.3.1	Ion exchange membrane DS devices . . . . .	105
5.3.2	Porous membrane DS devices . . . . .	113
5.3.3	Nonporous hydrophobic membrane DS devices . . . . .	125
5.4	Drops and films as collectors and reaction media for determining trace gases . . . . .	129
5.4.1	Static drops . . . . .	129
5.4.2	Falling drops . . . . .	130
5.4.3	Films . . . . .	132
5.5	Wet denuders . . . . .	136
5.5.1	Single tube wet denuders . . . . .	137
5.5.2	Rotating wet annular denuders . . . . .	140
5.5.3	TTU Gravity flow wet annular and parallel plate denuders . . . . .	141
5.5.4	Circular end parallel plate wet denuders (CEPPWD) . . . . .	146
5.5.5	Which wet denuder design to choose? . . . . .	147
5.5.6	Wet denuder coupled IC analysis of acid gases and ammonia . . . . .	148
5.5.7	Denuder liquid considerations for IC coupling . . . . .	151
5.5.8	Miscellaneous wet denuder applications . . . . .	153
5.6	Conclusions . . . . .	154
	Acknowledgements . . . . .	154
	References . . . . .	154

## *Chapter 6. Automated measurement of atmospheric particle composition . . . . .* 161

Purnendu K. Dasgupta and Simon K. Poruthoor

6.1	Introduction . . . . .	161
6.1.1	The need for chemically specific measurement of aerosol composition (speciation monitors) . . . . .	161
6.1.2	Aerosols and gases: an inseparable link . . . . .	162
6.2	Sampling and analysis concepts . . . . .	162
6.2.1	Thermal decomposition based methods . . . . .	164
6.2.2	Post-sampling aerosol analysis: spectroscopic methods . . . . .	167
6.2.3	Aerosol mass spectrometry . . . . .	169
6.2.4	Aerosol metal concentrations by real-time emission spectrometry . . . . .	171
6.2.5	Measurement of aerosol carbon . . . . .	172
6.3	General schemes of collection and wet analysis . . . . .	175
6.3.1	Methods for continuous particle collection and wet analysis . . . . .	176
6.3.2	Applications of aerosol collection and wet analysis . . . . .	200

6.4 Conclusions . . . . .	210
Acknowledgement . . . . .	210
References . . . . .	210

<i>Chapter 7. Physicochemical properties of aqueous and solid environmental matrices</i> . . . . .	219
--	-----

Albrecht Paschke

7.1 Introduction . . . . .	219
7.2 Physicochemical properties of aqueous matrices . . . . .	221
7.2.1 Temperature [7–9] . . . . .	221
7.2.2 Density [7–9] . . . . .	221
7.2.3 Colouring [7–9] . . . . .	222
7.2.4 Turbidity [7–9] . . . . .	222
7.2.5 pH Value [7–9] . . . . .	222
7.2.6 Redox potential [1,7–9] . . . . .	224
7.2.7 Conductivity [7–9] . . . . .	225
7.2.8 Surface tension [12,17] . . . . .	226
7.2.9 Total/dissolved organic carbon [7–9] . . . . .	226
7.3 Physicochemical properties of solid matrices . . . . .	228
7.3.1 Temperature [29] . . . . .	228
7.3.2 Water content [30,35] . . . . .	228
7.3.3 Density [31,36] . . . . .	229
7.3.4 Cation exchange capacity [6,37] . . . . .	230
7.3.5 pH Value [4,5,42] . . . . .	231
7.3.6 Redox potential [6,42,43] . . . . .	231
7.3.7 Particle size distribution [11–12,17,32,38,42] . . . . .	232
7.3.8 Surface area and porosity [6,12,17,33,34,39] . . . . .	236
7.3.9 Total organic carbon [6,40] . . . . .	237
References . . . . .	238

<i>Chapter 8. Characterization of analyte binding and freely dissolved concentrations in environmental and biological materials</i> . . . . .	241
---	-----

Joop L.M. Hermens and Wouter H.J. Vaes

8.1 Introduction . . . . .	241
8.1.1 Analyte binding and freely dissolved concentration . . . . .	241
8.1.2 Theory of analyte binding . . . . .	242
8.2 Techniques for measuring freely dissolved concentration and analyte binding . . . . .	244
8.2.1 Techniques used in bioanalyses and environmental analyses for measuring freely dissolved concentrations . . . . .	244
8.2.2 Solid phase microextraction (SPME) for measuring freely dissolved concentrations . . . . .	245
8.3 Solid phase microextraction for measuring freely dissolved concentrations and partition behaviour: examples in bio- and environmental analyses . . . . .	247
8.4 Concluding remarks . . . . .	250
References . . . . .	251

## **Extraction Technology Fundamentals**

<i>Chapter 9. Unified theory of extraction</i> . . . . .	253
Janusz Pawliszyn	
9.1 Introduction . . . . .	253
9.1.1 Steps in the analytical process . . . . .	253
9.1.2 Sample preparation as part of the analytical process . . . . .	254
9.1.3 Classification of extraction techniques . . . . .	255
9.2 Fundamentals . . . . .	257
9.2.1 Thermodynamics . . . . .	257
9.2.2 Kinetics . . . . .	259
9.3 Optimisation of the extraction process . . . . .	265
9.3.1 Flow-through techniques. . . . .	266
9.3.2 Batch techniques . . . . .	267
9.3.3 Boundary layer model . . . . .	268
9.3.4 Solid vs. liquid sorbents . . . . .	268
9.3.5 Diffusion-based calibration. . . . .	269
9.3.6 Headspace extraction. . . . .	272
9.3.7 Passive time weighted average sampling . . . . .	272
9.3.8 Extraction combined with derivatisation . . . . .	274
9.3.9 Membrane extraction techniques . . . . .	275
9.4 Summary: significance of fundamental developments . . . . .	276
References . . . . .	277
<i>Chapter 10. Headspace gas chromatography</i> . . . . .	279
Zelda E. Penton	
10.1 Overview. . . . .	279
10.1.1 Introduction . . . . .	279
10.1.2 Static versus dynamic headspace . . . . .	279
10.2 Theory of conventional static headspace. . . . .	280
10.2.1 Partition coefficient and phase ratio ( $\beta$ ). . . . .	280
10.2.2 Parameters affecting the partition coefficient . . . . .	282
10.3 Optimization of headspace response . . . . .	284
10.3.1 Decrease the partition coefficient of analytes in the matrix . . . . .	284
10.3.2 Mixing. . . . .	284
10.3.3 Injection volume . . . . .	284
10.3.4 Vial size . . . . .	285
10.3.5 Multiple sampling from a headspace vial . . . . .	285
10.4 Quantitation in headspace . . . . .	286
10.4.1 Quantitation techniques . . . . .	286
10.4.2 Internal standards in headspace quantitation . . . . .	289
10.4.3 Problems with quantitation . . . . .	289
10.5 Headspace hardware . . . . .	289
10.5.1 Manual headspace . . . . .	290
10.5.2 Automated headspace . . . . .	290

10.6	Headspace applications . . . . .	291
10.6.1	Volatiles in biological fluids . . . . .	292
10.6.2	Pharmaceutical and other industrial applications . . . . .	293
10.6.3	Environmental methods . . . . .	294
10.7	Headspace GC as a tool for determining thermodynamic constants. . . . .	295
10.8	Conclusion . . . . .	295
	Acknowledgements . . . . .	295
	References . . . . .	296
<i>Chapter 11. Liquid-liquid extraction</i>	297	
Frederick F. Cantwell and Manon Losier		
11.1	Introduction to liquid-liquid extraction for sample preparation . . . . .	297
11.1.1	Goals of performing LLE . . . . .	297
11.1.2	Terminology of LLE in sample preparation [1,2] . . . . .	298
11.1.3	Advantages of LLE . . . . .	300
11.1.4	Problems with the classical approach . . . . .	300
11.1.5	Modern approaches to LLE . . . . .	301
11.1.6	Kinetics and mechanism . . . . .	302
11.1.7	Convection, momentum transfer and interfacial adsorption. . . . .	305
11.1.8	Quantitative analysis by LLE . . . . .	306
11.2	Segmented two-phase flow techniques . . . . .	306
11.2.1	Introduction . . . . .	306
11.2.2	Equilibrium, kinetics and zone broadening in segmented flow LLE . . . . .	310
11.2.3	Modes of segmented flow LLE . . . . .	312
11.2.4	Advantages, shortcomings and future directions . . . . .	313
11.3	Drop techniques with two phases . . . . .	314
11.3.1	Introduction . . . . .	314
11.3.2	Equilibrium and kinetics of Single Drop-LPME . . . . .	315
11.3.3	Drop dissolution in the aqueous phase . . . . .	318
11.3.4	Modes of single drop-LPME . . . . .	320
11.3.5	Advantages, shortcomings and future directions . . . . .	328
11.4	Unsupported liquid membrane techniques with three phases . . . . .	329
11.4.1	Introduction . . . . .	329
11.4.2	Equilibrium, kinetics and modes of operation for unsupported membrane-LPME [9,10]. . . . .	331
11.4.3	Advantages, problems and future directions . . . . .	334
11.5	Speciation: A warning and an opportunity. . . . .	335
11.5.1	Introduction . . . . .	335
	References . . . . .	337
<i>Chapter 12. Principles and practice of solid-phase extraction</i>	341	
Colin F. Poole		
12.1	Introduction . . . . .	341
12.2	Evolution of solid-phase extraction. . . . .	342

12.2.1	Historical development . . . . .	342
12.2.2	As a replacement for liquid–liquid extraction . . . . .	344
12.2.3	Choice of cartridge or disc formats . . . . .	346
12.3	Sorbent types and their applications . . . . .	347
12.3.1	Inorganic oxide adsorbents . . . . .	347
12.3.2	Low-specificity sorbents . . . . .	349
12.3.3	Compound and class-specific sorbents . . . . .	353
12.4	Theory of solid-phase extraction . . . . .	359
12.4.1	Breakthrough volumes . . . . .	359
12.4.2	Kinetic optimization of cartridge and disc devices . . . . .	362
12.4.3	Retention . . . . .	365
12.5	Method development . . . . .	372
12.5.1	Method and mode selection . . . . .	372
12.5.2	Sample processing considerations . . . . .	373
12.5.3	Computer-aided methods . . . . .	375
12.6	Automation and coupled-column systems . . . . .	377
12.6.1	Coupled-column techniques . . . . .	378
12.7	Conclusions . . . . .	382
	References . . . . .	382

## Applications

### *Chapter 20. Sampling and sample preparation for pheromone analysis . . . . .* 669

Jocelyn G. Millar		
20.1	Introduction . . . . .	669
20.2	Types of pheromones . . . . .	670
20.2.1	Sex pheromones . . . . .	671
20.2.2	Recognition pheromones . . . . .	671
20.2.3	Marking pheromones . . . . .	671
20.2.4	Alarm pheromones . . . . .	672
20.2.5	Trail pheromones . . . . .	672
20.2.6	Aggregation pheromones . . . . .	672
20.2.7	Other pheromones . . . . .	672
20.3	Pheromones in biological contexts . . . . .	673
20.4	Methods for sampling and collecting pheromones . . . . .	674
20.4.1	Whole body and pheromone gland extracts . . . . .	677
20.4.2	Continuous collection of pheromones . . . . .	678
20.4.3	Solid phase micro-extraction . . . . .	683
20.4.4	Miscellaneous methods . . . . .	690
20.5	Summary and conclusions . . . . .	692
	References . . . . .	692

### *Chapter 21. Sampling and sample preparation for fragrance analysis . . . . .* 699

Fabio Augusto and Cláudia Alcaraz Zini		
21.1	Introduction . . . . .	699
21.2	Analytical distillation procedures . . . . .	702
21.2.1	Vapor distillation . . . . .	702
21.2.2	Simultaneous distillation-extraction (SDE) . . . . .	702
21.2.3	Other distillation methods . . . . .	703
21.3	Headspace methods . . . . .	704
21.3.1	Static headspace analysis (SHS) . . . . .	704
21.3.2	Dynamic headspace analysis (DHS) . . . . .	705
21.3.3	Headspace solid phase microextraction (HS-SPME) . . . . .	709
21.4	Direct extraction procedures . . . . .	712
21.4.1	Liquid-liquid extraction (LLE) . . . . .	712
21.4.2	Solid phase extraction (SPE) . . . . .	713

21.4.3 Supercritical fluid extraction (SFE) . . . . .	714
21.5 Final remarks . . . . .	715
References . . . . .	717
<i>Chapter 22. Sample preparation for water analysis</i> . . . . .	721
Karsten Levsen	
22.1 Introduction . . . . .	721
22.1.1 General considerations . . . . .	721
22.1.2 Target versus non-target analysis, off-site versus on-site analysis . . . . .	722
22.1.3 Sample extraction and cleanup . . . . .	723
22.1.4 Parameters influencing the extraction . . . . .	724
22.2 Liquid-liquid extraction (LLE) . . . . .	725
22.2.1 General considerations . . . . .	725
22.2.2 Procedures . . . . .	726
22.2.3 Automated liquid-liquid extraction and field analysis . . . . .	727
22.2.4 Applications of on-line liquid-liquid extraction coupled with GC (LLE-GC) . . . . .	727
22.2.5 Solvent evaporation . . . . .	728
22.3 Headspace sampling. . . . .	728
22.3.1 General considerations . . . . .	728
22.3.2 Static (equilibrium) headspace. . . . .	729
22.3.3 Dynamic headspace. . . . .	730
22.4 Solid-phase extraction (SPE) . . . . .	731
22.4.1 General considerations . . . . .	731
22.4.2 SPE formats and procedures. . . . .	733
22.4.3 Breakthrough volume . . . . .	734
22.4.4 Binding energies . . . . .	736
22.4.5 Conventional sorbents . . . . .	736
22.4.6 Sorbents with enhanced selectivity . . . . .	740
22.4.7 Automated solid-phase extraction . . . . .	742
22.4.8 Solid-phase extraction in field analysis . . . . .	746
22.4.9 Applications of solid-phase extraction for water analysis. . . . .	747
22.5 Solid-phase microextraction (SPME) . . . . .	748
22.5.1 General considerations . . . . .	748
22.5.2 Procedures . . . . .	749
22.5.3 Extraction phases. . . . .	751
22.5.4 Calibration . . . . .	751
22.5.5 Derivatization. . . . .	752
22.5.6 Parameters determining the extraction . . . . .	752
22.5.7 Matrix effects . . . . .	752
22.5.8 Field analysis . . . . .	753
22.5.9 Applications. . . . .	753
22.6 Membrane-based techniques . . . . .	754
22.6.1 General considerations . . . . .	754
22.6.2 Extraction with non-porous membranes . . . . .	756

22.6.3	Analyte enrichment and selectivity with membrane techniques . . . . .	757
22.6.4	Special membrane techniques . . . . .	759
22.6.5	Automation . . . . .	760
22.6.6	Field analysis . . . . .	760
22.6.7	Applications . . . . .	762
22.7	Sample cleanup in water analysis . . . . .	762
22.7.1	Natural organic matter . . . . .	762
22.7.2	Column switching methods . . . . .	763
22.7.3	Polluted aqueous samples . . . . .	763
	References . . . . .	764
<i>Chapter 23. Sampling and sample preparation for clinical and pharmaceutical analysis</i> . . . . .		779
Hiroyuki Kataoka and Heather L. Lord		
23.1	Introduction . . . . .	779
23.1.1	Objectives and strategies for sampling and sample preparation . . . . .	779
23.1.2	Classification of sampling and sample preparation for drug analysis . . . . .	782
23.1.3	Objectives and scope of this chapter . . . . .	784
23.2	Considerations for biological matrices . . . . .	784
23.2.1	Serum, plasma and whole blood . . . . .	785
23.2.2	Urine . . . . .	786
23.2.3	Saliva . . . . .	787
23.2.4	Milk . . . . .	788
23.2.5	Hair . . . . .	789
23.2.6	Sweat . . . . .	790
23.2.7	Other matrices . . . . .	792
23.3	Considerations for illicit drug preparations and pharmaceutical products . . . . .	792
23.3.1	Illicit pharmaceuticals . . . . .	793
23.3.2	Pharmaceutical excipients by formulation type . . . . .	795
23.3.3	Pharmaceutical excipients by action . . . . .	796
23.4	Sample preparation techniques in clinical and pharmaceutical analysis . . . . .	799
23.4.1	Protein removal . . . . .	800
23.4.2	Liquid-liquid extraction . . . . .	801
23.4.3	Supercritical fluid extraction . . . . .	803
23.4.4	Solid-phase extraction . . . . .	805
23.4.5	Solid-phase microextraction . . . . .	807
23.4.6	Affinity sorbent extraction . . . . .	814
23.4.7	Membrane-based sample preparation . . . . .	818
23.4.8	Other sample preparation techniques . . . . .	821
23.5	Conclusions . . . . .	822
	References . . . . .	825

## New Materials

<i>Chapter 30. Recent progresses in membrane separation science and technologies: a review</i> . . . . .	983
Takeshi Matsuura	
30.1 Introduction . . . . .	983
30.2 Progress in membrane development . . . . .	983
30.2.1 Progress in reverse osmosis . . . . .	983
30.2.2 Progress in gas separation membranes . . . . .	987
30.2.3 Progress in pervaporation membranes . . . . .	989
30.2.4 Surface modification by surface modifying macro-molecules (SMM) . . . . .	990
30.3 Progress in membrane characterization . . . . .	993
30.3.1 Membrane surface characterization by the measurement of pore sizes . . . . .	993
30.3.2 Membrane surface characterization by atomic force microscopy (AFM) . . . . .	994
30.3.3 Membrane surface characterization by electron spin resonance (ESR) . . . . .	996
30.4 Progress in membrane transport. . . . .	998
30.5 Hybrid systems for water treatment . . . . .	999
30.6 Progress in membrane extraction. . . . .	1000
30.7 Conclusions. . . . .	1001
References. . . . .	1003

<i>Chapter 31. Novel fibrous systems for contaminant removal</i> . . . . .	1005
James Economy and Christian Mangun	
31.1 Introduction . . . . .	1005
31.2 Review of environmental materials . . . . .	1005
31.2.1 Activated carbons . . . . .	1005
31.2.2 Ion exchange beads . . . . .	1006
31.3 Recent developments . . . . .	1007
31.3.1 Activated carbon fibers . . . . .	1007

31.3.2 Ion exchange fibers to remove inorganic contaminants . . . . .	1014
31.4 Summary . . . . .	1020
References . . . . .	1021
<i>Chapter 32. New polymeric extraction materials</i> . . . . .	1023
Abdul Malik	
32.1 Introduction . . . . .	1023
32.2 Scope of this chapter . . . . .	1024
32.3 New polymeric materials in solution-mediated extraction . . . . .	1025
32.3.1 Dendrimers in solution-mediated extraction . . . . .	1026
32.3.2 Temperature-responsive polymers (TRP) in solution mediated extraction . . . . .	1026
32.4 New polymeric materials in solid-phase extraction . . . . .	1029
32.4.1 Working principle of solid-phase extraction . . . . .	1029
32.4.2 Traditional solid-phase extraction materials . . . . .	1030
32.4.3 Polymeric extraction materials in SPE . . . . .	1034
32.5 New polymeric materials for membrane-based extraction . . . . .	1044
32.6 New polymeric materials for solid-phase microextraction . . . . .	1049
32.6.1 Working principle and variants of solid-phase microextraction . . . . .	1049
32.6.2 Polymeric surface coatings for SPME . . . . .	1050
32.6.3 Newly emerging polymeric materials for solid-phase microextraction . . . . .	1053
32.7 Conclusion . . . . .	1069
References . . . . .	1071
<i>Chapter 33. Immunosorbents in sample preparation</i> . . . . .	1081
Valérie Pichon, Nathalie Delaunay-Bertoncini, Marie-Claire Hennion	
33.1 Introduction: interest for selective solid-phase extraction methods . . . . .	1081
33.2 Characteristics of immunosorbents . . . . .	1082
33.2.1 Antibodies . . . . .	1082
33.2.2 Antibody immobilization . . . . .	1083
33.3 Properties of solid-phase extraction immunosorbent . . . . .	1084
33.3.1 The immunoextraction sequence . . . . .	1084
33.3.2 Affinity for the analyte–antigen and the structurally related analytes: class specificity . . . . .	1085
33.3.3 Polyclonal vs. monoclonal antibodies for class-selective ISs . . . . .	1087
33.3.4 Immunosorbent capacity . . . . .	1088
33.4 Optimization of the immunoextraction procedure . . . . .	1090
33.4.1 Sample volume and extraction recovery . . . . .	1090
33.4.2 Elution conditions . . . . .	1092
33.4.3 Regeneration and re-usability . . . . .	1093
33.4.4 Flow-rate effect during the sample percolation step . . . . .	1093
33.4.5 How to discriminate between specific and non specific interactions . . . . .	1094

33.5 Applications . . . . .	1094
33.5.1 Off-line immunoextraction. . . . .	1094
33.5.2 On-line coupling with chromatographic methods . . . . .	1095
33.5.3 Potential for rapid sample throughput with coupling to micro-LC. . . . .	1097
33.6 Conclusion . . . . .	1098
References . . . . .	1099
Abbreviations . . . . .	1101
