<i>List of Contributors</i>	xiii
<i>Introduction</i>	xv

PART I INTERNATIONAL TRADE THEORY

The Metzler Tariff Paradox: Extensions to Nontraded and Intermediate Commodities

Ronald W. Jones

Introduction	3
I. The Metzler Analysis in the Traditional Case	4
II. Nontraded Goods: The Home Country Reaction	5
III. Nontraded and Intermediate Goods: The Elasticity of the Foreign Offer Curve	9
IV. Concluding Remarks	13
Appendix	14
References	18

The Transfer Problem Once Again

John S. Chipman

I. Introduction	19
II. General Formulation	27
III. The Case of Single-Valued Supply Functions: Some General Results	31
IV. The Case of Pure Exchange	41
V. The Transfer Problem with Production	49
Appendix A. The Three-Factor Case	67
Appendix B. The Effect of a Transfer on the Relative Prices of the Two Domestic Commodities	70
Appendix C. Classes of Utility Functions That Satisfy the Hypothesis of Neutral Tastes	72
References	75

v

The Welfare Economics of Reversed International Transfers

Harry G. Johnson

Introduction	79
I. The Cobb–Douglas Utility Function	83
II. Reversed Transfer, Case 1: Transfer Specified in Domestic Product	88
III. Reversed Transfer, Case 2: Transfer Specified in Foreign Product	90
IV. Summary of Results	91
V. Time Preference and Reversed Transfers	92
VI. A Geometrical Explanation and Extension of the Results	94
Appendix I. Some Numerical Results	98
Appendix II. A Postscript	108
References	109

Some Problems of Stabilization Policy under Floating Exchange Rates

M. June Flanders

I. Introduction	111
II. Policy Considerations for a Single Country	114
III. The “ $n - 1$ ” Problem	120
IV. Conclusion	125
References	126

Devaluation and the Balance of Trade under Flexible Wages

Joanne Salop

Introduction	129
Symbols	131
I. A Macromodel of an Open Economy	131
II. The Component Markets	134
III. Devaluation	138
IV. Comparison and Synthesis	144
V. Summary and Conclusions	150
References	151

On the Analytical Framework of Tariffs and Trade Policy

Akira Takayama

I. Introduction	153
II. Basic Model	155
III. Domestic Distortions	164
IV. Nontraded Commodities	168
References	177

PART II MATHEMATICAL ECONOMICS

Stability Independent of Adjustment Speed

Kenneth J. Arrow

I. Introduction	181
II. Real Characteristic Roots of Products of Positive Diagonal and P -Matrices	184
III. Some Notes on Connected Sets	188
IV. Location of Characteristic Roots of Matrices	191
V. Constancy of the Inertia of a Matrix	193
VI. Conditions That DX and D Have the Same Number of Characteristic Roots with Zero Real Part	195
VII. A General Class of Matrices for Which the Inertia of DX Is Equal to That of D	198
References	201

A Class of Generalized Metzlerian Matrices

203

James P. Quirk

References	219
------------	-----

Hysteresis of Long-Run Equilibrium from Realistic Adjustment Costs

Murray C. Kemp and Henry Y. Wan, Jr.

I. Introduction	221
II. Assumptions, Notation, Conclusions	222
III. Example 1	224
IV. Example 2	229
V. Example 3	232
VI. Final Remarks	236
Appendix A. Derivation of Optimal Trajectories for Individual Firm or Industry	237
Appendix B. Speculative Pricing	240
References	241

Stability in an Economy with Production

Anjan Mukherji

I. Production and Gross Substitutes	243
II. The Economy	245
III. Stabilizing Income Effects	247
IV. On an Arrow-Hahn Conjecture	251
V. The Leontief Model	254
References	257

Stability of Markets with Public Goods: A Case of Gross Substitutability 259
Takashi Negishi

References 267

Marx as Mathematical Economist: Steady-State and Exponential Growth Equilibrium

Paul A. Samuelson

Introduction	269
I. Two Claims to Fame	270
II. Simple Reproduction	272
III. Balanced Expanding Reproduction	276
IV. A Digression on Morishima's Alternative to Marx	279
V. Marx as Advancer of Mainstream-Economics Analytical Technique	280
VI. Living in Marx's Skin: Numerical Examples Generalized	281
VII. Handling Marx's Underlying Technology	283
VIII. Indeterminacy of Wage and Distributive Shares?	286
IX. The Number One Issue in Appraising Karl Marx's Theoretical Innovations	288
X. Final Summing Up	292
Appendix	292
References	305

PART III INVENTORY FLUCTUATIONS

Aggregate Inventory Behavior: A Critical Study of a Class of Models

John A. Carlson and William E. Wehrs

Introduction	311
I. The Basic Model	312
II. A More Complete Model	317
III. A Preliminary Test for Consistency	324
IV. Conclusion	329
References	331

Inventories and the Generalized Accelerator

Gerald L. Childs

I. Introduction	333
II. Data	335
III. Demand Forecasts	336

Contents

ix

IV. Buffer Stocks	337
V. Materials and Supplies	345
VI. Conclusions	352
Appendix. Definition of Variables	353
References	353

Monetary Policy and the Inventory Cycle*Michael C. Lovell*

Introduction	355
I. The Model	356
II. Dynamic Properties of the Deterministic Model	359
III. The Optimal Simple Rule: Deterministic Case	363
IV. Stochastic Complications	367
V. Summary and Conclusions	369
References	370

PART IV MACROMONETARY THEORY**IS-LM as a Dynamic Framework***Patric H. Hendershott and George Horwich*

Introduction	375
I. The Hicksian IS-LM Analysis	376
II. Financial Underpinnings	378
III. Disequilibrium in the Financial Markets	384
IV. IS-LM Dynamics	389
V. Summary	397
Appendix	398
References	398

The Dynamics of Interest Rate Adjustment in a Keynesian Macroeconomic Model*Wayne F. Perg*

Introduction	401
I. The Postulates, Nontâtonnement Dynamics, and Walras' Law	402
II. Structure of the Model	407
III. Comparative Statics, Stability, and Dynamics	413
IV. Summary	421
Appendix A. Walras' Law for Flows	422
Appendix B. Derivation of Equation (38)	423
References	424

The Theory of Money and Income Consistent with Orthodox Value Theory

Earl A. Thompson

Introduction	427
I. The Theory of Money Consistent with Orthodox Value Theory	429
II. The Theory of Income Determination Consistent with Orthodox Value Theory	442
III. Conclusion	451
References	452

Monetary Theory and Economic Consolidations 455

Gerrit Bilkes and Edward Ames

References	484
------------	-----

PART V GROWTH

Money, Growth, and the Propensity to Save: An Iconoclastic View

Ronald I. McKinnon

Introduction	487
I. Financial Structure and Monetary Policy	489
II. The Saving Function	493
III. A Harrod-Domar Growth Model with a Variable Propensity to Save	496
IV. Concluding Notes and Empirical Observations	499
References	501

Economic Growth and Stages of the Balance of Payments: A Theoretical Model

Stanley Fischer and Jacob A. Frenkel

Introduction	503
I. The Production, Consumption, and Trade Relationships	504
II. The Characteristics of the Steady State	507
III. The Dynamic Behavior of the System	509
IV. Conclusions	515
Appendix. Derivation of Time Paths of Net Holdings of Foreign Securities and the Capital Account	516
References	520

**On the Dynamic Stability of Economic Growth: The Neoclassical versus
Keynesian Approaches***Hirofumi Uzawa*

I. Introduction	523
II. Basic Assumptions of the Neoclassical Growth Theory	524
III. Dynamic Equilibrium of the Neoclassical Model	528
IV. The Neoclassical Theory of Monetary Growth	529
V. A Keynesian Theory of Economic Growth	537
VI. Keynesian Growth under Full Employment	547
VII. Concluding Remarks	551
References	552
<i>Author Index</i>	554
