

Contents

1	Introduction	1
2	General Presentation of Mean Field Control Problems	7
2.1	Model and Assumptions	7
2.2	Definition of the Problems	8
3	The Mean Field Games	11
3.1	HJB-FP Approach	11
3.2	Stochastic Maximum Principle	12
4	The Mean Field Type Control Problems	15
4.1	HJB-FP Approach	15
4.2	Other Approaches	18
4.3	Stochastic Maximum Principle	21
4.4	Time Inconsistency Approach	23
5	Approximation of Nash Games with a Large Number of Players	31
5.1	Preliminaries	31
5.2	System of PDEs	32
5.3	Independent Trajectories	32
5.4	General Case	36
5.5	Nash Equilibrium Among Local Feedbacks	42
6	Linear Quadratic Models	45
6.1	Setting of the Model	45
6.2	Solution of the Mean Field Game Problem	45
6.3	Solution of the Mean Field Type Problem	48
6.4	The Mean Variance Problem	51
6.5	Approximate N Player Differential Game	57
7	Stationary Problems	59
7.1	Preliminaries	59
7.2	Mean Field Game Set-Up	60

7.3	Additional Interpretations	61
7.4	Approximate N Player Nash Equilibrium	64
8	Different Populations	67
8.1	General Considerations	67
8.2	Multiclass Agents	67
8.3	Major Player	72
8.3.1	General Theory	72
8.3.2	Linear Quadratic Case	82
9	Nash Differential Games with Mean Field Effect	89
9.1	Description of the Problem	89
9.2	Mathematical Problem	89
9.3	Interpretation	91
9.4	Another Interpretation	93
9.5	Generalization	94
9.6	Approximate Nash Equilibrium for Large Communities	95
10	Analytic Techniques	99
10.1	General Set-Up	99
10.1.1	Assumptions	99
10.1.2	Weak Formulation	101
10.2	A Priori Estimates for u	102
10.2.1	L^∞ Estimate for u	102
10.2.2	$L^2(W^{1,2})$ Estimate for u	103
10.2.3	C^α Estimate for u	103
10.2.4	$L^p(W^{2,p})$ Estimate for u	106
10.3	A Priori Estimates for m	110
10.3.1	$L^2(W^{1,2})$ Estimate	110
10.3.2	$L^\infty(L^\infty)$ Estimates	111
10.3.3	Further Estimates	115
10.3.4	Statement of the Global A Priori Estimate Result	115
10.4	Existence Result	116
