Contents

Introduction to the series v
Preface and acknowledgements xi
List of contributors xiii

I. INTRODUCTION 1

1. A selective survey 3
Daniel F. Spulber

II. CAPITAL THEORY AND RESOURCE MANAGEMENT 27

Introduction to Part II 29

2. The economics of fishing and modern capital theory: A simplified approach 31
Colin W. Clark and Gordon R. Munro

3. Consistent and revised plans for natural resource use 55
Tracy R. Lewis and Philip Neher

III. NONCONVEXITIES AND OPTIMAL RESOURCE USE 75

Introduction to Part III 77

4. Nonconcave dynamic programming: An example 79
David Levhari, Ron Michener and Leonard J. Mirman

5. Optimal use of renewable resources with nonconvexities in production 95
Tracy R. Lewis and Richard Schmalensee

digitalisiert durch:
IDS Luzern

IV. OPTIMAL HARVESTING OF RENEWABLE RESOURCES UNDER UNCERTAINTY 113

Introduction to Part IV 115

6. Adaptive harvesting of a renewable resource and stable equilibrium 117
Daniel F. Spulber

7. A note on learning and optimal decisions with a partially observable state space 141
Mukul Majumdar

V. INDUSTRY STRUCTURE AND RESOURCE USE 155

Introduction to Part V 157

8. Free access and the dynamics of the fishery 159
John M. Hartwick

9. Dynamic programming models of fishing: Monopoly 175
David Levhari, Ron Michener and Leonard J. Mirman

10. Bilateral monopoly in fisheries and optimal management policy 187
Gordon R. Munro

11. The economics of multi-purpose fleet behavior 203
Lee G. Anderson

12. Using the household production function in biofeedback models 227
Kenneth E. McConnell and Jon G. Sutinen

VI. GAME THEORY AND THE FREE-ACCESS FISHERY 239

Introduction to Part VI 241

13. The great fish war: An example using a dynamic Cournot–Nash solution 243
David Levhari and Leonard J. Mirman

14. Stochastic fishery games with myopic equilibria 259
Matthew J. Sobel

VII. MODELS OF FISHERY REGULATION 269

Introduction to Part VII 271

15. Models of fishery regulation 273
Colin W. Clark
