Contents

Preface ix

Chapter 1. Orderable groups and their algebraic properties 1

§1.1. Invariant orderings 2

§1.2. Examples 3

§1.3. Bi-orderable groups 6

§1.4. Positive cone 7

§1.5. Topology and the spaces of orderings 8

§1.6. Testing for orderability 11

§1.7. Characterization of left-orderable groups 13

§1.8. Group rings and zero divisors 15

§1.9. Torsion-free groups which are not left-orderable 16

Chapter 2. Hölder's theorem, convex subgroups and dynamics 21

§2.1. Hölder's theorem 21

§2.2. Convex subgroups 24

§2.3. Bi-orderable groups are locally indicable 26

§2.4. The dynamic realization of a left-ordering 27

Chapter 3. Free groups, surface groups and covering spaces 31

§3.1. Surfaces 31

§3.2. Ordering free groups 33

§3.3. Ordering surface groups 36

§3.4. A theorem of Farrell 39

Chapter 4. Knots 43
§4.1. Review of classical knot theory 43
§4.2. The Wirtinger presentation 47
§4.3. Knot groups are locally indicable 49
§4.4. Bi-ordering certain knot groups 51
§4.5. Crossing changes: A theorem of Smythe 60

Chapter 5. Three-dimensional manifolds 65
§5.1. Ordering 3-manifold groups 66
§5.2. Surgery 67
§5.3. Branched coverings 71
§5.4. Bi-orderability and surgery 75

Chapter 6. Foliations 77
§6.1. Examples 77
§6.2. The leaf space 81
§6.3. Seifert fibered spaces 81
§6.4. $\mathbb{R}$-covered foliations 87
§6.5. The universal circle 89

Chapter 7. Left-orderings of the braid groups 91
§7.1. Orderability properties of the braid groups 93
§7.2. The Dehornoy ordering of B_n 95
§7.3. Thurston's orderings of B_n 97
§7.4. Applications of the Dehornoy ordering to knot theory 108

Chapter 8. Groups of homeomorphisms 115
§8.1. Homeomorphisms of a space 115
§8.2. PL homeomorphisms of the cube 116
§8.3. Proof of Theorem 8.6 118
§8.4. Generalizations 119
§8.5. Homeomorphisms of the cube 120

Chapter 9. Conradian left-orderings and local indicability 121
§9.1. The defining property of a Conradian ordering 122
§9.2. Characterizations of Conradian left-orderability 126

Chapter 10. Spaces of orderings 131
§10.1. The natural actions on $LO(G)$ 132
§10.2. Orderings of $\mathbb{Z}^n$ and Sikora's theorem 133
§10.3. Examples of groups without isolated orderings 135
§10.4. The space of orderings of a free product 137
§10.5. Examples of groups with isolated orderings 139
§10.6. The number of orderings of a group 140
§10.7. Recurrent orderings and a theorem of Witte-Morris 144
