Contents

Part I Once Upon a Time

1 Framing the Risk Challenge 3
Introduction 3
An Introduction to Risk 5
Risk Management Is a Modern Requirement 5
Risk Management Defined 6
Despite Advances, Surprises are Still Common 7
The Problem with Risk Management Today 10
Perception Influences Decisions 10
Siloed Sources of Data 11
Bad Data Leads to Bad Decisions 12
Limited Prediction Accuracy 12
Over Simplification 13
Conclusion 13

2 Understanding the Hidden Risk of Dynamic Complexity 15
Introduction 15
Dynamic Complexity Defined 16
Static Versus Dynamic Complexity Risk 16
The Discovery of Dynamic Complexity's Hidden Contribution to Risk 17
The Appearance of Surprises 19
Real World Examples of Dynamic Complexity's Contribution to Risk 20
Dynamic Complexity by Design: Fukushima Daiichi Nuclear Disaster 20
Environmental Influences on Dynamic Complexity: Ebola Virus 21
Conclusion 22

3 **Understanding the Nature of Risk** 25
Introduction 25
Risk Is Dynamic in Nature 26
Control Cannot Be Maintained Through Reactionary Measures 27
Risk and Unintended Consequences: Roots and Causes 27
Extending Our Understanding of the Root Causes of Unanticipated Risks 28
Dynamic Complexity 28
Over-Engineered and Over-Stretched Solutions 29
The Gap Between Business Dynamics and System Implementation 29
The Favoritism of Building Versus Risk Mitigation 29
Prediction Practices that Ignore Major Influencers 30
Conclusion 31

4 **Human Interaction and Perception of Risk** 33
Introduction 33
Human Interaction with Risk is the Start 34
Unknowns are the Achilles Heel of Risk Management 35
Risk Awareness Versus Risk Management 35
Risk as a Business Disruptor 36
Human Perception of Risk is the Key 37
Risk Interval of Tolerance: Evolution Produces Contradictory Perception 40
Conclusion 41

5 **Risk Evolves as Experience Evolves** 43
Introduction 43
Natural Hazards 44
Unnatural Risks 44
Areas of Risk Management 45
Enterprise Risk Management 45
Business Continuity Management 48
Business Impact Analysis 49
Disaster Recovery 49
Safety Engineering 49
Example of Industry-Specific Risk Management Program: NASA . . . 50
Conclusion 52

6 **Why the Risk Comes as a Surprise** 53
Introduction 53
We Do Not Know the Distance 54
The Hidden Risk Environment 55
Conclusion 56

7 **Systemic and Systematic Risk** 57
Introduction 57
Examples of Risk Management Failures 58
Ericsson 58
Barings Bank 58
Malaysia Airlines 58
Boston Scientific Corp. 59
Comair 59
Unknowns Are Often the Greatest Contributors of Risk 59
Financial Crisis 60
Pandemic 60
Software Risk and Adaptability 61
Conclusion 62

8 **How Risk Is Currently Mitigated Versus How It Should Be Mitigated** 63
Introduction 63
Common Practices Used to Understand and Mitigate Risk 65
The Achilles Heel and the Single Point of Failure 65
Probabilistic Methods Applied on Past Experience 65
Simulation 67
Benchmarking 69
Combining Simulation with Benchmarking 70
Overcoming the Limits of Statistical Models 71
Testing as a Way to Capture Defects Beforehand 71
Conclusion 72

9 **Consequentialism Is Necessary** 75
Introduction 75
Physics Point of View 76
Economy Point of View 76
System Analysis Point of View 76
Risk Analysis Point of View 77
Risk and Environment Interaction 77
Internal Risks 79
External Risks 79
Business Risks 80
Conclusion 81

10 **Uncertainty Is the Enemy of Risk Management** 83
Applying Science to Predict, Remediate, and Monitor Risk 83
Dynamic Complexity Is Biggest Threat Management Faces 84
Historical Comparisons and Benchmarks Cannot Define the Path Forward 86
The Impacts of Dynamic Complexity Will Only Strengthen Over Time 86

Management Errors Accelerate Dynamic Complexity 87
Building a Blue Print for a Better Future 87
Cost Obsession Must Give Way to Greater Decision Impact Analysis 88
Management Must Move From Reactionary to Proactive 88
Conclusion 89

Part II Unified View to Discover, Emulate, Predict, and Control Risk

11 Modern Risk Management 93
Introduction 93
Dynamic Complexity's Contribution to Risk 94
Deconstruct to Understand, Apply Causal Analysis 95
Predictive Estimation of Dynamic Complexity 96
Degree of Complexity (Dependencies) 97
Complexity Index (Lost Opportunity) 98
Complexity Disruptors (Vector of Causes) 99
Four Fundamental Parameters to Risk Exposure 100
Dycom: The Dynamic Complexity Indicator 100
RI: The Risk Index Vector 100
E^2: Engineering Efficiency 101
A^2: Aging Acceleration 101
Using Mathematics to Predict and Determine the Risk of Singularity . . . 101
Surveillance to Control Risk and Intervene at the Right Time 103
Conclusion 103

12 Evolution and Risk: The Bridge and the Missing Link 105
Introduction 105
Automation Introduced New Business Risk 106
The Gap Between Business and Systems 106
Conclusion 108

13 The Role of Dynamic Complexity in Risk Propagation 109
Introduction 109
A System Cannot be Accurately Defined Without Dynamic Complexity 110
Conclusion 111

14 Scientific Deterministic Risk Management 113
Introduction 113
The Identification of Risk Using Determinism 114
Dynamic Complexity Versus Traditional Economics 115
Small Divisor Problems in Partial Differential Equations: The Perturbed Solution 116
Conclusion 117

15 New Universal Risk Management Methodology (X-Act® OBC Platform) 119
Introduction 119
Phase One: Risk Perception 119
Phase Two: Risk Modeling 120
Phase Three: Risk Discovery 121
Phase Four: Risk Mitigation 123
Phase Five: Risk Monitoring 124
Conclusion 125

16 Risk Discovery: Using Patterns to Spot the Un-Spottable 127
Introduction 127
The Origin of Patterns 128
How Might We Use Patterns? 129
How Might We Understand Patterns? 129
Dynamic Patterns 131
Emulative Deconstruction 131
How Perturbation Theory Helps Us 135
Dynamic Signature 135
Practical Use of Dynamic Patterns 137
Conclusion 138

17 Predictive Modeling 139
Introduction 139
Mechanisms to Help Solve the Problem 140
Measurements-Based Simulation 140
Queuing Theory 140
Ergodic Theory 141
Statistical Simulation 141
Moving from Specific to Universal Analysis Mechanisms 142
Analytical Solution of Perturbed Service Process 142
It's the Small Divisors and Their Effects that Can Cause Chaos 144
System Dynamics Theories 144
Conclusion 145

18 Causal Deconstruction 147
Introduction 147
Understanding a System Through Deconstruction 148
A Complex System Under Optimal Control 149
Hierarchic Perturbation Model 149
Causal Deconstruction Method 154
Stage 1: Establish Base Dynamics 155
Stage 2: Deconstruct Complexity 157
Stage 3: Construct Emulator 157
Stage 4: Predict Singularities 161
Stage 5: Compare to Actual 162

Stage 6: Define Improvement 162
Stage 7: Monitor Execution 164
Conclusion 167

19 The Need for Hierarchic Predictive Emulation 169
Introduction 169
Mathematical Predictive Emulation of Dynamic Complexity 171
Step 1: Define and Collect Information 171
Step 2: Deconstruct and Prepare the Input for Mathematical Emulation 172
Step 3: Emulate the System and Its Dynamic Complexity 173
Step 4: Use the Mathematical Predictive Analytics to Diagnose, Discover Limit, and Identify Remediation 173
Conclusion 174

20 A Mathematical Treatise of Dynamic Complexity 175
Introduction 175
The Origin of Perturbation Theory 176
Solving a Problem Using Perturbation Theory 177
Perturbation Orders 178
Why Use Perturbation Theory Versus Numerical or Statistical Methods? 179
Exposing the Unknown Using Mathematics 180
Mathematical Hierarchy 180
8-Level Mathematical Hierarchy 181
N-Level Mathematical Hierarchy: Postal Services 181
Perturbation Theory Mathematical Solution 183
The Mathematical Wrapper or Exact Solution 185
The Mathematical Method 187
Validation and Calibration (The World Is Not Perfect) 187
Conclusion 188

21 Emulative Deconstruction for Mathematical Prediction 191
Introduction 191
Definition of Emulative Deconstruction Theory 192
Why Is Emulative Deconstruction Necessary? 193
Understanding Corporate Performance: Influencers and Impacting Factors 194
Examples of Corporate Performance Influencers and Impacting Factors 194
Extended Predictive Space 196
Common Predictive Platform for Existing and Future Enterprise . . . 196
Dynamic Maneuverability Metric 197
Conclusion 198

22 Singularity and Chaos Theory 201
Introduction 201
Chaos Theory 202
Singularity Theory 204
Single Singularity 204
Multiple Singularities: Singularity Resurgence 206
Areas Covered by Mathematical Predictive Analytics 207
Conclusion 207

23 The Mathematical Solution 209
Introduction 209
Dynamic Complexity Indicator (Dycom) and Management Indicators including a Risk Index (RI) 211
Lower-Level Mathematical Emulation Examples 214
Example 1 Space–Time: The Case of Relational Data Model (Direct and Indirect Perturbation) 214
Computational Algorithm of Content in the Active Zone 215
Perturbed Case 218
Example 2: Human Service (Direct and Indirect Perturbation) 220
Example 3 Space–Time: Postal Sorting Machine or Robot in Automotive Production Workshop 220
Example 4: Economic Instruments 221
Conclusion 221

Part III Universal Risk Management Cases

24 The Big Dig: Business Evolution and IT Dephasing Creates Dynamic Complexity 229
Introduction 229
The Big Dig and IT Project Failures 230
Case Study 1: Worldwide System Settlement and Clearing 233
Summary of Approach 236
Target Architecture: Guideline Principles 236
A Better Path Forward Using MBA 238
Case Study 2: ATM System Supports Activities from 7000+ Terminals 239
Conclusion 241

25 From Corporate Survival to Revival 243
Introduction 243
Industry Background 245
Market Evolution Brings New Risks 248
Defining the Future Competitive Path 250
Corporate Survival: Minimizing the Operational Risk 250

Disruption on the Horizon: Is Revival Possible? 254
Conclusion 255

26 An Industry Reinvented by Design: Postal Services 257
Introduction 257
Case Background 258
Market Factors 258
Challenges 258
Desired Outcomes 259
Acknowledging Major Complexity Impacts 259
Two-Dimensions of Complexity in Postal Services 259
Prioritizing Actions 260
Strategic Insights 260
End-to-End Visibility 261
The Proposed Predictive Technology Roadmap 261
Service Planning, Control, and Monitoring Through Predictive Emulation 263
Methodology Phases 264
The Predictive Analysis 266
Achieving Universal Risk Management 267
Conclusion 269

27 Expanding Under Control and the Transformative Evolution 271
Introduction 271
Supply Chain Management 272
Risks Associated to Supply Chain Processes 273
Major Retail Supply Chain Case 275
Moving Towards Universal Risk Management 276
The Methodology 277
PHASE 1 277
PHASE 2 277
Conclusion 278

28 Healthcare System Efficiency: Avoiding a Major Misdiagnosis . . . 279
Introduction 279
The Unintended Consequences of Healthcare System Change Programs 280
Benchmarking Healthcare 282
Using Predictive Analytics to Move Towards Universal Risk Management 284
Conclusion 286

29 The 2007 Financial Meltdown: Was It Avoidable? 287
Introduction 288
A Better Path Forward 288
The Market Players 291

X-Act Financial Economic Predictor 292
Three Segments of Financial Dynamic Flow in 2007 292
The Singularity is Precipitated by a Heating of the Market 293
The Singularity Hits When the System Becomes Out of Control . . . 294
How Mortgage Backed Securities Brought Down the Economy Through a Triple Big-Dig 296
Preparing to Avoid the Next Financial Singularity 297
Conclusion 301

30 Greece in Crisis: The Haze, Mirage and Survival 303
Introduction 303
The Origin of Crisis: The Haze Appeared Quickly 304
The Pay Back of Money: The Mirage 307
The Survival 309
Conclusion 310

31 Dealing with the Growing Epidemic of Chronic Crisis 313
Introduction 313
Mathematical Economic Risk Models 315
The Safety Rings that Will Save Us from Drowning in Chronic Crisis 315
Identifying the Clues that Economic Crisis Will Become Chronic in a Post-2008 World 315
The Economy at a Tipping Point 319
The Trigger of Disaster: Don't Let the Dinosaur Move in a China Shop 322
Why Disruption Is Necessary While Politicians Are Still Celebrating the End of Crisis 323
Stopping the Progress from Uncontrolled Sophistication to Chronic Disease 324
Short-Term Actions 325
Medium-Term Actions 325
Long-Term Actions 326
Protecting a System from Its Dynamics 326
Conclusion 327

32 Risk Management: A Future Perspective 329
Introduction 329
Risk Mitigation Practices for Knowns and Predicted Unknowns 331
Prescriptive Mitigation: Reduce the Complexity by Reengineering . . . 332
Foundational Mitigation 333
Forward Lucubration 334
A Deterministic Approach Is Necessary 334
Conclusion 335

33 Disruption: The Way to Fight Chronic Risk 337
Introduction 337
Understanding Disruption 339
Disruption is Critical, Transformative, and Innovative 340
Mathematically Justifying a Disruptive Move 342
The Myth of Right Time to Act and the Chronic Crisis 343
Causal Disruption: Improve, Revive, and Renew 344
Why and How Disruption Becomes Necessary 345
Disruption Implemented 346
Cultural Adaptive Change 347
Reengineering the Process 347
Conclusion 348

34 Epilog 349
The Elephant in the Room 350
Managing Is Risky! A New Risk Management Discipline Is Necessary 351
Avoid Crisis 352
Maintain Predictability 352
Control Dynamic Complexity 352
Measure All Influencing Forces 353
Drop the Classifications 353
Acknowledge Outside Influences 353
Democratize Knowledge 354
Use Meaningful Metrics 354
Conclusion 354

Appendix A: Exploring the Pitfalls of Traditional Risk Analysis in Financial Industries 357
Background to the Laws of Financial Dynamics 357
The Laws of Thermodynamics 357
The Transformation from Thermodynamics to Financial Dynamics 358
Examining the Problems with Traditional Risk Modeling Methods 359
A New Way to Look at Economy and Risk 360
Proposing a Fourth Law of Financial Dynamics 360
Modeling Economic Dynamics 360
Conclusion 361

Glossary 363

Index 369
