Contents

1 Basic Concepts 1
- 1.1 Thermodynamic Systems 2
- 1.2 State, Equilibrium 4
- 1.3 The Concept of Temperature 6
- 1.4 Equations of State 7
  - 1.4.1 Ideal Gas 8
  - 1.4.2 Van der Waals Gas 10
  - 1.4.3 Ideal Paramagnet 14
  - 1.4.4 Weiss Ferromagnet 15
- 1.5 Work 18
- 1.6 Exercises 22
- 1.7 Self-Examination Questions 26

2 Laws of Thermodynamics 29
- 2.1 First Law of Thermodynamics, Internal Energy 29
- 2.2 Heat Capacities 33
- 2.3 Adiabatics, Isotherms 35
- 2.4 Second Law of Thermodynamics 38
- 2.5 Carnot Cycle 41
- 2.6 Absolute, Thermodynamic Temperature Scale 45
- 2.7 Entropy as State Quantity 48
- 2.8 Simple Conclusions from the Thermodynamic Laws 55
- 2.9 Exercises 61
- 2.10 Self-Examination Questions 71

3 Thermodynamic Potentials 75
- 3.1 'Natural' State Variables 75
- 3.2 Legendre Transformation 77
- 3.3 Homogeneity Relations 81
- 3.4 The Thermodynamic Potentials of the Ideal Gas 83
- 3.5 Entropy of Mixing 87
- 3.6 Joule-Thomson Effect 91

3.7 Equilibrium Conditions 95
3.7.1 Isolated Systems 95
3.7.2 Closed System in a Heat Bath Without Exchange of Work 97
3.7.3 Closed System in a Heat Bath with Constant Forces 99
3.7.4 Extremal Properties of **U** and **H** 100
3.8 The Third Law of Thermodynamics (Nernst's Heat Theorem) 101
3.9 Exercises 106
3.10 Self-Examination Questions 114

4 Phases, Phase Transitions 117
4.1 Phases 117
4.1.1 Gibbs Phase Rule 117
4.1.2 Vapor Pressure Curve (Clausius-Clapeyron) 123
4.1.3 Maxwell Construction 124
4.2 Phase Transitions 128
4.2.1 Geometrical Interpretation 128
4.2.2 Ehrenfest's Classification 132
4.2.3 Critical Exponents 136
4.2.4 Critical Exponent Inequalities 144
4.2.5 Scaling Hypothesis 151
4.3 Exercises 156
4.4 Self-Examination Questions 160

A Solutions of the Exercises 163

Index 279
