1	Poly(arylene vinylene)s – Synthesis and Applications in Semiconductor Devices	1
	<i>Michael M. Murray and Andrew B. Holmes</i>	
1.1	Introduction	1
1.2	Poly(1,4-phenylene vinylene) and its Derivatives	2
1.2.1	The Basic Polymer LED Device Architecture	4
1.2.2	Substituted Poly(phenylene vinylene)s	6
1.2.2.1	Poly(anthrylenevinylene)s	10
1.2.3	Step-Growth Routes to PPV Derivatives	10
1.2.4	PPV Copolymers	11
1.3	Refining the Properties of PPV – Multilayer Devices	13
1.3.1	Multilayer Devices: The Incorporation of Charge-Transporting Layers	14
1.3.2	Electron-Deficient Polymers – Luminescent Transport Layers	16
1.3.2.1	Other Electron-Deficient PPV Derivatives	19
1.3.2.2	Electron-Deficient Aromatic Systems	19
1.4	Full Color Displays – The Search for Blue Emitters	21
1.4.1	Isolated Chromophores – Towards Blue Emission	21
1.4.2	Comb Polymers with Chromophores on the Side-Chain	22
1.5	Chiral PPV – Polarized Emission	23
1.6	Poly(thienylene vinylene)s – A Stable Class of Low-Band-Gap Materials	24
1.6.1	Organic Field Effect Transistors (FETs)	25
1.6.2	Synthesis	26
1.6.3	Aldol Route	27
1.6.4	Ring-Substituted PTV Derivatives	27
1.6.5	Vinylene-Substituted PTV Derivatives – Tuning the Gap	30
1.7	Conclusions and Outlook	31
	Acknowledgements	32
