Contents

Preface xiii

1 Introduction 1
- 1.1 Earthworm segments, skewness and kurtosis 2
- 1.2 Empirical likelihood, parametric likelihood, and the bootstrap 4
- 1.3 Bibliographic notes 6

2 Empirical likelihood 7
- 2.1 Nonparametric maximum likelihood 7
- 2.2 Nonparametric likelihood ratios 10
- 2.3 Ties in the data 11
- 2.4 Multinomial on the sample 12
- 2.5 EL for a univariate mean 16
- 2.6 Coverage accuracy 17
- 2.7 One-sided coverage levels 19
- 2.8 Power and efficiency 20
- 2.9 Computing EL for a univariate mean 21
- 2.10 Empirical discovery of parametric families 24
- 2.11 Bibliographic notes 25
- 2.12 Exercises 27

3 EL for random vectors 29
- 3.1 NPMLE for IID vectors 29
- 3.2 EL for a multivariate mean 30
- 3.3 Fisher, Bartlett, and bootstrap calibration 31
- 3.4 Smooth functions of means 35
- 3.5 Estimating equations 39
- 3.6 EL for quantiles 43
- 3.7 Ties and quantiles 45
- 3.8 Likelihood-based estimating equations 48
- 3.9 Transformation invariance of EL 50
- 3.10 Side information 51
- 3.11 Sandwich estimator 55
- 3.12 Robust estimators 56

3.13 Robust likelihood 59
3.14 Computation and convex duality 60
3.15 Euclidean likelihood 63
3.16 Other nonparametric likelihoods 66
3.17 Bibliographic notes 70
3.18 Exercises 74

4 Regression and modeling **79**
4.1 Random predictors 79
4.2 Nonrandom predictors 83
4.3 Triangular array ELT 85
4.4 Analysis of variance 87
4.5 Variance modeling 90
4.6 Nonlinear least squares 91
4.7 Generalized linear models 95
4.8 Poisson regression 101
4.9 Calibration, prediction, and tolerance regions 104
4.10 Euclidean likelihood for regression and ANOVA 106
4.11 Bibliographic notes 107
4.12 Exercises 108

5 Empirical likelihood and smoothing **111**
5.1 Kernel estimates 111
5.2 Bias and variance 113
5.3 EL for kernel smooths 114
5.4 Blood pressure trajectories 116
5.5 Conditional quantiles 117
5.6 Simultaneous inference 118
5.7 An additive model 121
5.8 Bibliographic notes 124
5.9 Exercises 125

6 Biased and incomplete samples **127**
6.1 Biased sampling 127
6.2 Multiple biased samples 130
6.3 Truncation and censoring 135
6.4 NPMLE's for censored and truncated data 139
6.5 Product-limit estimators 141
6.6 EL for right censoring 143
6.7 Proportional hazards 147
6.8 Further empirical likelihood ratio results 147
6.9 Bibliographic notes 149
6.10 Exercises 153

7 Bands for distributions **155**
7.1 The ECDF 156
7.2 Exact calibration of ECDF bands 157
7.3 Asymptotics of bands 158
7.4 Bibliographic notes 160

8 Dependent data **163**
8.1 Time series 163
8.2 Reducing to independence 165
8.3 Blockwise empirical likelihood 168
8.4 Spectral method 173
8.5 Finite populations 174
8.6 MELE's using side information 176
8.7 Sampling designs 177
8.8 Empirical likelihood ratios for finite populations 179
8.9 Other dependent data 180
8.10 Bibliographic notes 180
8.11 Exercises 183

9 Hybrids and connections **185**
9.1 Product of parametric and empirical likelihoods 185
9.2 Parametric conditional likelihood 186
9.3 Parametric models for data ranges 187
9.4 Empirical likelihood and Bayes 188
9.5 Bayesian bootstrap 188
9.6 Least favorable families and nonparametric tilting 189
9.7 Bootstrap likelihood 191
9.8 Bootstrapping from an NPMLE 191
9.9 Jackknives 192
9.10 Sieves 194
9.11 Bibliographic notes 196
9.12 Exercises 199

10 Challenges for EL **201**
10.1 Symmetry 201
10.2 Independence 207
10.3 Comparison to permutation tests 208
10.4 Convex hull condition 209
10.5 Inequality and qualitative constraints 210
10.6 Nonsmooth estimating equations 211
10.7 Adverse estimating equations and black boxes 213
10.8 Bibliographic notes 213
10.9 Exercises 215

11 Some proofs **217**
11.1 Lemmas 217
11.2 Univariate and Vector ELT 219
11.3 Triangular array ELT 222
11.4 Multi-sample ELT 223
11.5 Bibliographic notes 226

12 Algorithms **229**
12.1 Statistical tasks 230
12.2 Smooth optimization 232
12.3 Estimating equation methods 234
12.4 Partial derivatives 238
12.5 Primal problem 241
12.6 Sequential linearization 244
12.7 Bibliographic notes 247

13 Higher order asymptotics **249**
13.1 Bartlett correction 249
13.2 Bartlett correction and smooth functions of means 250
13.3 Pseudo-likelihood theory 251
13.4 Signed root corrections 253
13.5 Large deviations 255
13.6 Bibliographic notes 257
13.7 Exercises 258

Appendix **261**
A.1 Order and stochastic order notation 261
A.2 Parametric models 262
A.3 Likelihood 264
A.4 The bootstrap idea 266
A.5 Bootstrap confidence intervals 267
A.6 Better bootstrap confidence intervals 269
A.7 Bibliographic notes 271
