

Contents

| | | |
|----------|---|----------|
| 1 | Introduction | 1 |
| 1.1 | Passivity, Optimality, and Stability | 2 |
| 1.1.1 | From absolute stability to passivity | 2 |
| 1.1.2 | Passivity as a phase characteristic | 3 |
| 1.1.3 | Optimal control and stability margins | 5 |
| 1.2 | Feedback Passivation | 6 |
| 1.2.1 | Limitations of feedback linearization | 6 |
| 1.2.2 | Feedback passivation and forwarding | 7 |
| 1.3 | Cascade Designs | 8 |
| 1.3.1 | Passivation with composite Lyapunov functions | 8 |
| 1.3.2 | A structural obstacle: peaking | 9 |
| 1.4 | Lyapunov Constructions | 12 |
| 1.4.1 | Construction of the cross-term | 12 |
| 1.4.2 | A benchmark example | 13 |
| 1.4.3 | Adaptive control | 15 |
| 1.5 | Recursive Designs | 15 |
| 1.5.1 | Obstacles to passivation | 15 |
| 1.5.2 | Removing the relative degree obstacle | 16 |
| 1.5.3 | Removing the minimum phase obstacle | 17 |
| 1.5.4 | System structures | 18 |
| 1.5.5 | Approximate asymptotic designs | 19 |
| 1.6 | Book Style and Notation | 23 |
| 1.6.1 | Style | 23 |
| 1.6.2 | Notation and acronyms | 23 |

| | |
|--|-----------|
| 2 Passivity Concepts as Design Tools | 25 |
| 2.1 Dissipativity and Passivity | 26 |
| 2.1.1 Classes of systems | 26 |
| 2.1.2 Basic concepts | 27 |
| 2.2 Interconnections of Passive Systems | 31 |
| 2.2.1 Parallel and feedback interconnections | 31 |
| 2.2.2 Excess and shortage of passivity | 34 |
| 2.3 Lyapunov Stability and Passivity | 40 |
| 2.3.1 Stability and convergence theorems | 40 |
| 2.3.2 Stability with semidefinite Lyapunov functions | 45 |
| 2.3.3 Stability of passive systems | 48 |
| 2.3.4 Stability of feedback interconnections | 50 |
| 2.3.5 Absolute stability | 54 |
| 2.3.6 Characterization of affine dissipative systems | 56 |
| 2.4 Feedback Passivity | 59 |
| 2.4.1 Passivity: a tool for stabilization | 59 |
| 2.4.2 Feedback passive linear systems | 60 |
| 2.4.3 Feedback passive nonlinear systems | 63 |
| 2.4.4 Output feedback passivity | 66 |
| 2.5 Summary | 68 |
| 2.6 Notes and References | 68 |
| 3 Stability Margins and Optimality | 71 |
| 3.1 Stability Margins for Linear Systems | 72 |
| 3.1.1 Classical gain and phase margins | 72 |
| 3.1.2 Sector and disk margins | 75 |
| 3.1.3 Disk margin and output feedback passivity | 78 |
| 3.2 Input Uncertainties | 83 |
| 3.2.1 Static and dynamic uncertainties | 83 |
| 3.2.2 Stability margins for nonlinear feedback systems | 86 |
| 3.2.3 Stability with fast unmodeled dynamics | 86 |
| 3.3 Optimality, Stability, and Passivity | 91 |
| 3.3.1 Optimal stabilizing control | 91 |
| 3.3.2 Optimality and passivity | 95 |
| 3.4 Stability Margins of Optimal Systems | 99 |
| 3.4.1 Disk margin for $R(x) = I$ | 99 |

| | | |
|----------|---|------------|
| 3.4.2 | Sector margin for diagonal $R(x) \neq I$ | 100 |
| 3.4.3 | Achieving a disk margin by domination | 103 |
| 3.5 | Inverse Optimal Design | 107 |
| 3.5.1 | Inverse optimality | 107 |
| 3.5.2 | Damping control for stable systems | 110 |
| 3.5.3 | CLF for inverse optimal control | 112 |
| 3.6 | Summary | 119 |
| 3.7 | Notes and References | 120 |
| 4 | Cascade Designs | 123 |
| 4.1 | Cascade Systems | 124 |
| 4.1.1 | TORA system | 124 |
| 4.1.2 | Types of cascades | 125 |
| 4.2 | Partial-State Feedback Designs | 126 |
| 4.2.1 | Local stabilization | 126 |
| 4.2.2 | Growth restrictions for global stabilization | 128 |
| 4.2.3 | ISS condition for global stabilization | 133 |
| 4.2.4 | Stability margins: partial-state feedback | 135 |
| 4.3 | Feedback Passivation of Cascades | 138 |
| 4.4 | Designs for the TORA System | 145 |
| 4.4.1 | TOA models | 145 |
| 4.4.2 | Two preliminary designs | 146 |
| 4.4.3 | Controllers with gain margin | 148 |
| 4.4.4 | A redesign to improve performance | 149 |
| 4.5 | Output Peaking: an Obstacle to Global Stabilization | 153 |
| 4.5.1 | The peaking phenomenon | 153 |
| 4.5.2 | Nonpeaking linear systems | 157 |
| 4.5.3 | Peaking and semiglobal stabilization of cascades | 163 |
| 4.6 | Summary | 170 |
| 4.7 | Notes and References | 171 |
| 5 | Construction of Lyapunov functions | 173 |
| 5.1 | Composite Lyapunov functions for cascade systems | 174 |
| 5.1.1 | Benchmark system | 174 |
| 5.1.2 | Cascade structure | 176 |
| 5.1.3 | Composite Lyapunov functions | 178 |
| 5.2 | Lyapunov Construction with a Cross-Term | 183 |

| | | |
|----------|--|------------|
| 5.2.1 | The construction of the cross-term | 183 |
| 5.2.2 | Differentiability of the function Ψ | 188 |
| 5.2.3 | Computing the cross-term | 194 |
| 5.3 | Relaxed Constructions | 198 |
| 5.3.1 | Geometric interpretation of the cross-term | 198 |
| 5.3.2 | Relaxed change of coordinates | 201 |
| 5.3.3 | Lyapunov functions with relaxed cross-term | 203 |
| 5.4 | Stabilization of Augmented Cascades | 208 |
| 5.4.1 | Design of the stabilizing feedback laws | 208 |
| 5.4.2 | A structural condition for GAS and LES | 210 |
| 5.4.3 | Ball-and-beam example | 214 |
| 5.5 | Lyapunov functions for adaptive control | 216 |
| 5.5.1 | Parametric Lyapunov Functions | 217 |
| 5.5.2 | Control with known θ | 219 |
| 5.5.3 | Adaptive Controller Design | 221 |
| 5.6 | Summary | 226 |
| 5.7 | Notes and references | 227 |
| 6 | Recursive designs | 229 |
| 6.1 | Backstepping | 230 |
| 6.1.1 | Introductory example | 230 |
| 6.1.2 | Backstepping procedure | 235 |
| 6.1.3 | Nested high-gain designs | 239 |
| 6.2 | Forwarding | 249 |
| 6.2.1 | Introductory example | 249 |
| 6.2.2 | Forwarding procedure | 253 |
| 6.2.3 | Removing the weak minimum phase obstacle | 257 |
| 6.2.4 | Geometric properties of forwarding | 263 |
| 6.2.5 | Designs with saturation | 266 |
| 6.2.6 | Trade-offs in saturation designs | 273 |
| 6.3 | Interlaced Systems | 276 |
| 6.3.1 | Introductory example | 276 |
| 6.3.2 | Non-affine systems | 278 |
| 6.3.3 | Structural conditions for global stabilization | 280 |
| 6.4 | Summary and Perspectives | 283 |
| 6.5 | Notes and References | 284 |

| | |
|---|------------|
| A Basic geometric concepts | 285 |
| A.1 Relative Degree | 285 |
| A.2 Normal Form | 287 |
| A.3 The Zero Dynamics | 290 |
| A.4 Right-Invertibility | 292 |
| A.5 Geometric properties | 293 |
| B Proofs of Theorems 3.18 and 4.35 | 295 |
| B.1 Proof of Theorem 3.18 | 295 |
| B.2 Proof of Theorem 4.35 | 297 |
