About the Authors xi
Preface xiii
Acknowledgements xv

1 Introduction 1

- 1.1 Introduction to Management Science 2
 - Does it Work? 2
- 1.2 Where Did MS Come From? 4
- 1.3 Management Science Applications 6
 - Assignment 6
 - Data Mining 7
 - Financial Decision Making 7
 - Forecasting 7
 - Logistics 7
 - Marketing 8
 - Networks 8
 - Optimization 8
 - Project Planning and Management 8
 - Queuing 8
 - Revenue Management 9
 - Simulation 9
 - Transportation 10
- 1.4 The MS Approach 10
 - Problem Recognition 11
 - Problem Structuring and Definition 11
 - Modelling and Analysis 12
 - Solutions and Recommendations 12
 - Implementation 12
- 1.5 Models 14
- 1.6 Models of Cost, Revenue and Profit 17
 - Cost and Volume Models 17
 - Revenue and Volume Models 18
 - Profit and Volume Models 18
 - Breakeven Analysis 18
- 1.7 The Modelling Process 20
- 1.8 Management Science Models and Techniques 21
 - Linear Programming 22
 - Transportation and Assignment 22
 - Network Models 22

- Project Management 22
- Inventory Models 22
- Queuing Models 22
- Simulation 22
- Decision Analysis 23
- Multicriteria Analysis 23
- Integer Linear Programming 23
- Forecasting 23
- Dynamic Programming 23
- Markov Process Models 23

- Summary 24
- Worked Example 24
- Problems 26
- Case Problem** Uhuru Craft Cooperative, Tanzania 28
- Appendix 1.1** Using Excel for Breakeven Analysis 29

2 An Introduction to Linear Programming 33

- 2.1 A Maximization Problem 35
 - Problem Formulation 36
 - Mathematical Statement of the GulfGolf Problem 39
- 2.2 Graphical Solution Procedure 40
 - A Note on Graphing Lines 48
 - Summary of the Graphical Solution Procedure for Maximization Problems 50
 - Slack Variables 51
- 2.3 Extreme Points and the Optimal Solution 53
- 2.4 Computer Solution of the GulfGolf Problem 54
 - Interpretation of Computer Output 55
- 2.5 A Minimization Problem 57
 - Summary of the Graphical Solution Procedure for Minimization Problems 58
 - Surplus Variables 59
 - Computer Solution of the M&D Chemicals Problem 61
- 2.6 Special Cases 62
 - Alternative Optimal Solutions 62

Infeasibility 63
Unbounded Problems 64

2.7 General Linear Programming Notation 66

Summary 67
Worked Example 68
Problems 71

Case Problem 1 Workload Balancing 76
Case Problem 2 Production Strategy 77
Case Problem 3 Blending 78
Appendix 2.1 Solving Linear Programmes With Excel 78

3 Linear Programming: Sensitivity Analysis and Interpretation of Solution 83

3.1 Introduction to Sensitivity Analysis 84

3.2 Graphical Sensitivity Analysis 86
Objective Function Coefficients 86
Simultaneous Changes 90
Right-Hand Sides 91

3.3 Sensitivity Analysis: Computer Solution 94
Interpretation of Computer Output 95
Simultaneous Changes 97
Interpretation of Computer Output – A Second Example 99
Cautionary Note on the Interpretation of Dual Prices 101

3.4 More than Two Decision Variables 102
The Modified GulfGolf Problem 102
The Kenya Cattle Company Problem 106
Formulation of the KCC Problem 108
Computer Solution and Interpretation for the KCC Problem 108

3.5 The Taiwan Electronic Communications (TEC) Problem 111
Problem Formulation 112
Computer Solution and Interpretation 113

Summary 117
Worked Example 117
Problems 118

Case Problem 1 Product Mix 130
Case Problem 2 Investment Strategy 131
Case Problem 3 Truck Leasing Strategy 132

4 Linear Programming Applications 133

4.1 The Process of Problem Formulation 134
4.2 Production Management Applications 136
Make-or-Buy Decisions 137

Production Scheduling 139
Workforce Assignment 146

4.3 Blending, Diet and Feed-Mix Problems 152

4.4 Marketing and Media Applications 159
Media Selection 159
Marketing Research 162

4.5 Financial Applications 165
Portfolio Selection 165
Financial Planning 169
Revenue Management 173

4.6 Data Envelopment Analysis 179

Summary 185
Problems 185
Case Problem 1 Planning an Advertising Campaign 194
Case Problem 2 Phoenix Computer 195
Case Problem 3 Textile Mill Scheduling 196
Case Problem 4 Workforce Scheduling 197
Case Problem 5 Cinergy Coal Allocation 198
Appendix 4.1 Excel Solution of Hewlitt Corporation Financial Planning Problem 201

5 Linear Programming: The Simplex Method 205

5.1 An Algebraic Overview of the Simplex Method 206
Algebraic Properties of the Simplex Method 207
Determining a Basic Solution 207
Basic Feasible Solution 208

5.2 Tableau Form 209

5.3 Setting Up the Initial Simplex Tableau 211

5.4 Improving the Solution 212

5.5 Calculating the Next Tableau 215
Interpreting the Results of an Iteration 217
Moving Toward a Better Solution 218
Interpreting the Optimal Solution 220
Summary of the Simplex Method 220

5.6 Tableau Form: The General Case 222
Greater-Than-or-Equal-to Constraints (\geq) 222
Equality Constraints 226
Eliminating Negative Right-Hand-Side Values 227
Summary of the Steps to Create Tableau Form 228

5.7 Solving a Minimization Problem 229

5.8 Special Cases 231
Infeasibility 231
Unbounded Problems 232

Alternative Optimal Solutions 234
Degeneracy 235

Summary 236
Worked Example 237
Problems 240

6 Simplex-Based Sensitivity Analysis and Duality 245

6.1 Sensitivity Analysis with the Simplex Tableau 246
Objective Function Coefficients 246
Right-Hand-Side Values 250
Simultaneous Changes 255

6.2 Duality 256
Interpretation of the Dual Variables 258
Using the Dual to Identify the Primal Solution 260
Finding the Dual of Any Primal Problem 260

Summary 262
Worked Example 262
Problems 263

7 Transportation, Assignment and Transshipment Problems 269

7.1 Transportation Problem: A Network Model and a Linear Programming Formulation 270
Problem Variations 273
A General Linear Programming Model of the Transportation Problem 275

7.2 Transportation Simplex Method: A Special-Purpose Solution Procedure 276
Phase I: Finding an Initial Feasible Solution 278
Phase II: Iterating to the Optimal Solution 281
Summary of the Transportation Simplex Method 290
Problem Variations 292

7.3 Assignment Problem: The Network Model and a Linear Programming Formulation 293
Problem Variations 295
A General Linear Programming Model of the Assignment Problem 296
Multiple Assignments 297

7.4 Assignment Problem: A Special-Purpose Solution Procedure 297
Finding the Minimum Number of Lines 301
Problem Variations 301

7.5 Transshipment Problem: The Network Model and a Linear Programming Formulation 304
Problem Variations 309

A General Linear Programming Model of the Transshipment Problem 310

7.6 A Production and Inventory Application 310

Summary 314
Worked Example 315
Problems 317

Case Problem 1 Distribution System Design 326

Appendix 7.1 Excel Solution of Transportation, Assignment and Transshipment Problems 327

8 Network Models 333

8.1 Shortest-Route Problem 334
A Shortest-Route Algorithm 335

8.2 Minimal Spanning Tree Problem 343
A Minimal Spanning Tree Algorithm 344

8.3 Maximal Flow Problem 346

Summary 351
Worked Example 351
Problems 352

Case Problem Ambulance Routing 357

9 Project Scheduling: PERT/CPM 359

9.1 Project Scheduling with Known Activity Times 361
The Concept of a Critical Path 362
Determining the Critical Path 363
Contributions of PERT/CPM 367
Summary of the PERT/CPM Critical Path Procedure 368
Gantt Charts 369

9.2 Project Scheduling with Uncertain Activity Times 370
The Daugherty Porta-Vac Project 371
Uncertain Activity Times 371
The Critical Path 374
Variability in Project Completion Time 375

9.3 Considering Time–Cost Trade-Offs 377
Crashing Activity Times 378

Summary 381
Worked Example 381
Problems 383

Case Problem R.C. Coleman 390

Appendix 9.1 Activity on Arrow Networks 391

10 Inventory Models 395

10.1 Principles of Inventory Management 396

The Role of Inventory 396

Inventory Costs 397

10.2 Economic Order Quantity (EOQ) Model 398

The How-Much-to-Order Decision 401

The When-to-Order Decision 403

Sensitivity Analysis for the EOQ Model 404

Excel Solution of the EOQ Model 405

Summary of the EOQ Model Assumptions 405

10.3 Economic Production Lot Size Model 406

Total Cost Model 408

Economic Production Lot Size 410

10.4 Inventory Model with Planned Shortages 411

10.5 Quantity Discounts for the EOQ Model 415

10.6 Single-Period Inventory Model with Probabilistic Demand 417

Juliano Shoe Company 418

Arabian Car Rental 421

10.7 Order-Quantity, Reorder Point Model with Probabilistic Demand 423

The How-Much-to-Order Decision 424

The When-to-Order Decision 425

10.8 Periodic Review Model with Probabilistic Demand 427

More Complex Periodic Review Models 430

Summary 431

Worked Example 432

Problems 433

Case Problem 1 Wagner Fabricating Company 437

Case Problem 2 River City Fire Department 438

Appendix 10.1 Development of the Optimal Order Quantity (Q) Formula for the EOQ Model 439

Appendix 10.2 Development of the Optimal Lot Size (Q^*) Formula for the Production Lot Size Model 440

11 Queuing Models 441

11.1 Structure of a Queuing System 442

Single-Channel Queue 444

Distribution of Arrivals 444

Distribution of Service Times 445

Steady-State Operation 446

11.2 Single-Channel Queuing Model with Poisson Arrivals and Exponential Service Times 446

Operating Characteristics 447

Operating Characteristics for the Dome Problem 448

Managers' Use of Queuing Models 448

Improving the Queuing Operation 449

Excel Solution of the Queuing Model 451

11.3 Multiple-Channel Queuing Model with Poisson Arrivals and Exponential Service Times 452

Operating Characteristics 452

Operating Characteristics for the Dome Problem 454

11.4 Some General Relationships for Queuing Models 456

11.5 Economic Analysis of Queues 458

11.6 Other Queuing Models 460

11.7 Single-Channel Queuing Model with Poisson Arrivals and Arbitrary Service Times 461

Operating Characteristics for the $M/G/1$ Model 461

Constant Service Times 462

11.8 Multiple-Channel Model with Poisson Arrivals, Arbitrary Service Times and No Queue 463

Operating Characteristics for the $M/G/k$ Model with Blocked Customers Cleared 463

11.9 Queuing Models with Finite Calling Populations 466

Operating Characteristics for the $M/M/1$ Model with a Finite Calling Population 466

Summary 469

Worked Example 469

Problems 471

Case Problem 1 Regional Airlines 476

Case Problem 2 Office Equipment, Inc. 477

12 Simulation 479

12.1 Risk Analysis 481

PortaCom Project 482

What-If Analysis 482

Simulation 483

Simulation of the PortaCom Problem 491

12.2 Inventory Simulation 494

Simulation of the Butler Inventory Problem 497

12.3 Queuing Simulation 499

Hong Kong Savings Bank ATM Queuing System 500

Customer Arrival Times 500

Customer Service Times 501

Simulation Model 501

Simulation of the ATM Problem 505

- Simulation with Two ATMs 506
- Simulation Results with Two ATMs 508
- 12.4 Other Simulation Issues** 510
 - Computer Implementation 510
 - Verification and Validation 511
 - Advantages and Disadvantages of Using Simulation 512
- Summary 512
- Worked Example 512
- Problems 515
- Case Problem 1** Dunes Golf Course 520
- Case Problem 2** Effortless Events 521
- Appendix 12.1** Simulation with Excel 522

13 Decision Analysis 529

- 13.1 Problem Formulation** 531
 - Payoff Tables 532
 - Decision Trees 532
- 13.2 Decision Making without Probabilities** 533
 - Optimistic Approach 533
 - Conservative Approach 534
 - Minimax Regret Approach 535
- 13.3 Decision Making with Probabilities** 536
 - Expected Value of Perfect Information 538
- 13.4 Risk Analysis and Sensitivity Analysis** 541
 - Risk Analysis 541
 - Sensitivity Analysis 542
- 13.5 Decision Analysis with Sample Information** 546
 - Decision Tree 546
 - Decision Strategy 548
 - Risk Profile 552
 - Expected Value of Sample Information 554
 - Efficiency of Sample Information 555
- 13.6 Calculating Branch Probabilities** 555
- 13.7 Utility and Decision Making** 558
 - The Meaning of Utility 559
 - Developing Utilities for Payoffs 561
 - Expected Utility Approach 563
- Summary 565
- Worked Example 565
- Problems 567
- Case Problem 1** Property Purchase Strategy 575

- Case Problem 2** Lawsuit Defence Strategy 577
- Appendix 13.1** Decision Analysis with Treeplan 577

14 Multicriteria Decisions 583

- 14.1 Goal Programming: Formulation and Graphical Solution** 584
 - Developing the Constraints and the Goal Equations 585
 - Developing an Objective Function with Preemptive Priorities 587
 - Graphical Solution Procedure 587
 - Goal Programming Model 590
- 14.2 Goal Programming: Solving More Complex Problems** 592
 - Suncoast Office Supplies Problem 592
 - Formulating the Goal Equations 593
 - Formulating the Objective Function 594
 - Computer Solution 595
- 14.3 Scoring Models** 598
- 14.4 Analytic Hierarchy Process** 603
 - Developing the Hierarchy 604
- 14.5 Establishing Priorities Using AHP** 605
 - Pairwise Comparisons 605
 - Pairwise Comparison Matrix 607
 - Synthesization 608
 - Consistency 609
 - Other Pairwise Comparisons for the Car Selection Problem 611
- 14.6 Using AHP to Develop an Overall Priority Ranking** 612
 - Summary 614
 - Worked Example 614
 - Problems 616
 - Case Problem** EZ Trailers 622
 - Appendix 14.1** Scoring Models with Excel 623
 - Conclusion: Management Science in Practice 624
 - Appendices 627
 - Appendix A Areas for the Standard Normal Distribution 628
 - Appendix B Values of $e^{-\lambda}$ 629
 - Appendix C Bibliography and References 630
 - Appendix D Self-Test Solutions 632
 - Glossary 660
 - Index 666
