Jan Mycielski
Addendum to the Foreword xiii
Preface xv

Part One Paradoxical Decompositions, or the Nonexistence of Finitely Additive Measures

1 Introduction 3
1.1 Examples of Paradoxical Actions 4
1.2 Geometrical Paradoxes 8

2 The Hausdorff Paradox 14

3 The Banach–Tarski Paradox: Duplicating Spheres and Balls 23

4 Hyperbolic Paradoxes 36
4.1 The Hyperbolic Plane 36
4.2 A Hyperbolic Hausdorff Paradox 38
4.3 A Banach–Tarski Paradox of the Whole Hyperbolic Plane 42
4.4 Paradoxes in an Escher Design 48
4.5 The Disappearing Hyperbolic Squares 51
4.6 A Bounded Hyperbolic Paradox 53

5 Locally Commutative Actions: Minimizing the Number of Pieces in a Paradoxical Decomposition 62
5.1 A Minimal Decomposition of a Sphere 62
5.2 A Minimal Decomposition of a Solid Ball 66
5.3 General Systems of Congruences 69

6 Higher Dimensions 78
6.1 Euclidean Spaces 78
6.2 Non-Euclidean Spaces 86
6.3 Tetrahedral Chains 88

7 Free Groups of Large Rank: Getting a Continuum of Spheres from One 93
7.1 Large Free Groups of Isometries 93
7.2 Large Free Semigroups of Isometries 107
7.3 Sets Congruent to Proper Subsets 109

8 Paradoxes in Low Dimensions 116
8.1 Paradoxes in the Plane 116
8.2 Paradoxes of the Real Line 126

9 Squaring the Circle 133
9.1 Changing the Group 133
9.2 The Squaring of the Circle 135
9.3 Generalizations and Open Problems 162

10 The Semigroup of Equidecomposability Types 168
10.1 The Semigroup of Equidecomposability Types 168
10.2 A Cancellation Law 175
10.3 Restrictions on the Pieces 178

Part Two Finitely Additive Measures, or the Nonexistence of Paradoxical Decompositions

11 Transition 193
11.1 Tarski's Theorem 193
11.2 The Marczewski Problem: A Paradox Using Baire Sets 199
11.3 Equidecomposability with Countably Many Pieces 207

12 Measures in Groups 219
12.1 Amenable Groups 219
12.2 Classes of Groups 223
12.3 Invariant Measures 225
12.4 Characterizations of Amenability 230
12.5 Topological Amenability 243

13 Applications of Amenability 247
13.1 Exotic Measures 247
13.2 Paradoxes modulo an Ideal 257
13.3 How to Eliminate Exotic Measures in $\mathbb{R}^2$ 259
13.4 Paradoxes Using Measurable Pieces 261
13.5 Characterizing Isometry Groups That Yield Paradoxes 262

14 Growth Conditions in Groups and Supramenability 270
14.1 Supramenable Groups 270
14.2 Bounded Paradoxical Sets 273
14.3 Group Growth 282
14.4 Cogrowth and Amenability 291

15 The Role of the Axiom of Choice 296
15.1 The Axiom of Choice Is Essential 296
15.2 The Axiom of Choice Can Sometimes Be Eliminated 306
15.3 Foundational Implications of the Banach–Tarski Paradox 308

Appendices

A Euclidean Transformation Groups 315

B Jordan Measure 320

C Graph Theory 322

Bibliography 325
List of Symbols 339
Index 343
