

Detailed Contents

Preface	xiii
About the Author	xvii
Chapter 1. Overview	1
General Perspectives on Measurement	2
Historical Origins of Measurement in Social Science	4
<i>Early Examples</i>	4
<i>Emergence of Statistical Methods and the Role of Mental Testing</i>	6
<i>The Role of Psychophysics</i>	6
Later Developments in Measurement	7
<i>Evolution of Basic Concepts</i>	7
<i>Evolution of Mental Testing</i>	8
<i>Assessment of Mental Illness</i>	8
<i>Broadening the Domain of Psychometrics</i>	12
The Role of Measurement in the Social Sciences	13
<i>The Relationship of Theory to Measurement</i>	13
<i>Theoretical and Atheoretical Measures</i>	14
<i>Measurement Scales</i>	15
<i>All Scales Are Not Created Equal</i>	17
<i>Costs of Poor Measurement</i>	19
Summary and Preview	20
Exercises	21
Chapter 2. Understanding the Latent Variable	23
Constructs Versus Measures	23
Latent Variable as the Presumed Cause of Item Values	25
Path Diagrams	26
<i>Diagrammatic Conventions</i>	26
<i>Path Diagrams in Scale Development</i>	27
Further Elaboration of the Measurement Model	29

<i>Classical Measurement Assumptions</i>	29
Parallel Tests	30
Alternative Models	33
<i>Choosing a Causal Model</i>	36
Exercises	37
Note	37

Chapter 3. Reliability

39

Methods Based on the Analysis of Variance	40
Continuous Versus Dichotomous Items	42
Internal Consistency	42
<i>Coefficient Alpha</i>	43
<i>The Covariance Matrix</i>	44
<i>Covariance Matrices for Multi-Item Scales</i>	45
<i>Alpha and the Covariance Matrix</i>	46
<i>Alternative Formula for Alpha</i>	50
<i>Critique of Alpha</i>	52
<i>Remedies to Alpha's Limitations</i>	57
<i>Coefficient Omega (ω)</i>	59
Reliability Based on Correlations Between Scale Scores	61
<i>Alternate-Forms Reliability</i>	61
<i>Split-Half Reliability</i>	62
<i>Inter-Rater Agreement</i>	66
<i>Temporal Stability</i>	67
<i>Reliability of Change Scores</i>	70
Reliability and Statistical Power	76
Generalizability Theory	77
Summary	80
Exercises	81
Notes	82

Chapter 4. Validity

83

Content Validity	84
<i>Scope of the Variable and Implications for Content Validity</i>	85
Criterion-Related Validity	92
<i>Criterion-Related Validity Versus Accuracy</i>	92
Construct Validity	95
<i>Differentiating Construct From Criterion-Related Validity</i>	95
<i>Attenuation</i>	97
<i>How Strong Should Correlations Be to Demonstrate</i>	
<i>Construct Validity?</i>	98
<i>Multitrait-Multimethod Matrix</i>	98
What About Face Validity?	100
Exercises	103

- Step 1: Determine Clearly What It Is You
Want to Measure 105
- Theory as an Aid to Clarity* 105
 - Specificity as an Aid to Clarity* 106
 - Being Clear About What to Include in a Measure* 108
- Step 2: Generate an Item Pool 109
- Choose Items That Reflect the Scale's Purpose* 109
 - Redundancy* 110
 - Number of Items* 113
 - Beginning the Process of Writing Items* 113
 - Characteristics of Good and Bad Items* 114
 - Positively and Negatively Worded Items* 116
 - Conclusion* 118
- Step 3: Determine the Format for Measurement 118
- Thurstone Scaling* 119
 - Guttman Scaling* 120
 - Scales With Equally Weighted Items* 122
 - How Many Response Categories?* 122
 - Specific Types of Response Formats* 126
 - Likert Scale 127
 - Semantic Differential 129
 - Visual Analog 130
 - Numerical Response Formats and
Basic Neural Processes 132
 - Binary Options 133
 - Item Time Frames 134
- Step 4: Have Initial Item Pool Reviewed by Experts 134
- Step 5: Consider Inclusion of Validation Items 136
- Step 6: Administer Items to a Development Sample 137
- Step 7: Evaluate the Items 139
- Initial Examination of Items' Performance* 140
 - Reverse Scoring 140
 - Item-Scale Correlations 142
 - Item Variances 142
 - Item Means 143
 - Dimensionality* 143
 - Reliability* 144
- Step 8: Optimize Scale Length 146
- Effect of Scale Length on Reliability* 146
 - Effects of Dropping "Bad" Items* 147

<i>Tinkering With Scale Length</i>	148
<i>Split Samples</i>	149
Exercises	150
Note	151
Chapter 6. Factor Analysis	153
Overview of Factor Analysis	155
<i>Examples of Methods Analogous to Factor Analytic Concepts</i>	156
Example 1	156
Example 2	157
Shortcomings of These Methods	158
Conceptual Description of Factor Analysis	161
<i>Extracting Factors</i>	161
The First Factor	161
Subsequent Factors	164
Deciding How Many Factors to Extract	165
<i>Rotating Factors</i>	171
Rotation Analogy 1	172
Rotation Analogy 2	172
Rotation Analogy 3	175
Orthogonal Versus Oblique Rotation	180
Choosing Type of Rotation	184
Bifactor and Hierarchical Factor Models	185
Interpreting Factors	192
Principal Components Versus Common Factors	193
<i>Same or Different?</i>	194
Confirmatory Factor Analysis	197
Using Factor Analysis in Scale Development	199
Sample Size	203
Conclusion	204
Exercises	204
Chapter 7. An Overview of Item Response Theory	205
Item Difficulty	209
Item Discrimination	210
Guessing, or False Positives	211
Item-Characteristic Curves	213
IRT Applied to Multiresponse Items	217
<i>Theta and Computerized Adaptive Testing (CAT)</i>	224
<i>Complexities of IRT</i>	226
Conclusions	229
Exercises	231

Chapter 8. Measurement in the Broader Research Context	233
Before Scale Development	233
<i>Look for Existing Tools</i>	233
<i>View the Construct in the Context of the Population of Interest</i>	235
<i>Decide on the Mode of Scale Administration</i>	237
<i>Consider the Scale in the Context of Other Measures or Procedures</i>	237
After Scale Administration	239
<i>Analytic Issues</i>	239
<i>Interpretation Issues</i>	239
<i>Generalizability</i>	240
Final Thoughts	240
<i>Small Measurement and Big Measurement</i>	240
<i>Canoes and Cruise Ships</i>	240
<i>Measurement “Canoes” and Measurement “Cruise Ships”</i>	242
<i>Practical Implications of Small Versus Big Measurement</i>	244
<i>Remember, Measurement Matters</i>	246
Exercise	246
References	247
Index	257
