Part I Fundamental Theorems

1	Discrete Time Models	3
1.1	Financial Assets and Portfolio Strategies	3
1.2	No-Arbitrage and Martingale Measures	6
1.2.1	Definition of the Absence of Arbitrage Opportunities	6
1.2.2	First Fundamental Theorem	7
1.2.3	Proof of the First Fundamental Theorem	8
1.3	European Option Pricing	13
1.3.1	Various Notions of Price.....	13
1.3.2	Dual Description of the Payoffs That Can Be Super-Hedged	14
1.3.3	Dual Formulation for the Super-Hedging Price and the Set of Viable Prices	17
1.3.4	Characterisation of the Hedging Strategy of a Replicable Payoff	18
1.4	Complete Markets.....	19
1.4.1	Definition and Characterisation	20
1.4.2	Martingale Representation Theorem and European Option Hedging	21
1.5	American Options.....	23
1.5.1	Supermartingale and <i>Snell Envelope</i>	23
1.5.2	Super-Replication Price and $\mathcal{M}(\bar{S})$ -Snell Envelope.....	25
1.5.3	Super-Replication Price and Optimal Stopping	26
1.5.4	Viable Prices	29
1.5.5	Rational Exercise Strategy	31
1.6	Models with Portfolio Constraints	32
1.7	Problems.....	33

2	Continuous Time Models	55
2.1	Financial Asset and Portfolio Strategies	55
2.1.1	Financial Assets	55
2.1.2	Portfolio Strategies	57
2.2	Absence of Arbitrage and Martingale Measures	58
2.2.1	Necessary Condition	58
2.2.2	Sufficient Condition	60
2.2.3	Necessary and Sufficient Condition	62
2.3	Pricing by Super-hedging	63
2.4	Complete Markets	64
2.4.1	Characterisation	65
2.4.2	The Case of an Invertible Volatility	66
2.4.3	Hedging and Malliavin Calculus	68
2.4.4	American Options: Hedging and Exercise Strategy	71
2.5	Portfolio Constraints	74
2.5.1	Dual Formulation of the Super-hedging Price	75
2.5.2	An Auxiliary Family of Unconstrained Problems	76
2.5.3	Study of the Dual Problem	77
2.6	Problems	80
3	Optimal Management and Price Selection	107
3.1	Optimal Management	107
3.1.1	Duality in Complete Markets	108
3.1.2	Extension to Incomplete Markets	109
3.1.3	Indifference Price	111
3.2	Loss Function Hedging	112
3.2.1	Quantile Hedging	113
3.2.2	Loss Function Hedging	116
3.2.3	Comments	119
3.3	Problems	119
 Part II Markovian Models and PDE Approach		
4	Delta Hedging in Complete Market	127
4.1	Markovian Models	127
4.2	Vanilla Options	129
4.2.1	Regular Case: Feynman-Kac Formula and <i>Delta-Hedging</i> ...	131
4.2.2	Non-smooth Case: Price Characterisation Using Viscosity Solutions	135
4.2.3	Tangent Process, Malliavin Derivatives and <i>Delta-Hedging</i>	139
4.3	Barrier Options	142
4.3.1	Pricing Equation with Dirichlet Boundary Condition	143
4.3.2	<i>Delta-Hedging</i> , Exploding Behaviour and Regularisation Techniques	145

4.4	American Options	147
4.4.1	Dynamic Programming Principle	147
4.4.2	Associated Quasi-variational Inequalities	150
4.4.3	Delta-Hedging in the Smooth Case	151
4.5	Problems	153
5	Super-Replication and Its Practical Limits	167
5.1	Hedging with Portfolio Constraints	168
5.1.1	Framework	168
5.1.2	Pricing Equation	170
5.1.3	Equivalence Property: Hedging a Modified Payoff Without Constraint	176
5.2	Application to Incomplete Markets	179
5.2.1	Non-hedgeable Volatility: The Black-Scholes-Barenblatt Equation	180
5.2.2	Non-hedgeable Volatility: The Unbounded Case, <i>Buy-and-Hold</i> Strategy	182
5.3	Problems	183
6	Hedging Under Loss Constraints	193
6.1	Super-Replication: A Direct Approach	193
6.1.1	Framework	193
6.1.2	Dynamic Programming Principle	195
6.1.3	Pricing Equation	196
6.1.4	Terminal Condition of the Pricing Equation	202
6.2	Hedging Under Loss Control	205
6.2.1	Problem Reduction	208
6.2.2	Pricing Equation	209
6.2.3	Time Boundary Condition	212
6.3	Comments	214
6.4	Problems	215

**Part III Practical Implementation in Local and Stochastic
Volatility Models**

7	Local Volatility Models	227
7.1	Black and Scholes Model and Implicit Volatility	227
7.2	Local Volatility Surface	228
7.2.1	Dupire's Approach	228
7.2.2	Calibration of the Volatility Curve on a Finite Number of Calls	232
7.2.3	The Recalibration Issue	234
7.3	Impact of the Gamma on the Hedging	235
7.3.1	Impact of a Volatility Misspecification	235
7.3.2	Impact of Discrete Rebalancing	236

7.4	Example: The CEV Model	239
7.5	Problems	241
8	Stochastic Volatility Models	255
8.1	Hedging with Liquid Options	255
8.2	Static and Semi-static Strategies	257
8.2.1	Decomposition of Payoff on a Basis of Calls and Puts	257
8.2.2	Application to Variance Swaps	258
8.3	Example: The Heston's Model	260
8.3.1	The Model	260
8.3.2	Fourier's Transform Computation	261
8.3.3	FFT Techniques for the Calibration on Call Prices	262
8.3.4	The Recalibration Issue	264
8.4	Problems	265
	References	273
	Index	277
	Index of Notations	279
