Part I Background Material

1	General Set-Up	3
1.1	Varieties	3
1.1.1	Linearising the Category of Varieties	3
1.1.2	Divisors with Normal Crossings	4
1.2	Complex Analytic Spaces	5
1.2.1	Analytification	5
1.3	Complexes	6
1.3.1	Basic Definitions	6
1.3.2	Filtrations	7
1.3.3	Total Complexes and Signs	8
1.4	Hypercohomology	9
1.4.1	Definition	10
1.4.2	Godement Resolutions	11
1.4.3	Čech Cohomology	13
1.5	Simplicial Objects	15
1.6	Grothendieck Topologies	20
1.7	Torsors	22
1.7.1	Sheaf-Theoretic Definition	23
1.7.2	Torsors in the Category of Sets	24
1.7.3	Torsors in the Category of Schemes (Without Groups)	27
2	Singular Cohomology	31
2.1	Relative Cohomology	31
2.2	Singular (Co)homology	34
2.3	Simplicial Cohomology	36
2.4	The Künneth Formula and Poincaré Duality	41
2.5	The Basic Lemma	45

2.5.1	Formulations of the Basic Lemma	45
2.5.2	Direct Proof of Basic Lemma I	47
2.5.3	Nori's Proof of Basic Lemma II	49
2.5.4	Beilinson's Proof of Basic Lemma II	52
2.5.5	Perverse Sheaves and Artin Vanishing	55
2.6	Triangulation of Algebraic Varieties	59
2.6.1	Semi-algebraic Sets	60
2.6.2	Semi-algebraic Singular Chains	66
2.7	Singular Cohomology via the h' -Topology	70
3	Algebraic de Rham Cohomology	73
3.1	The Smooth Case	73
3.1.1	Definition	73
3.1.2	Functoriality	76
3.1.3	Cup Product	77
3.1.4	Change of Base Field	79
3.1.5	Étale Topology	80
3.1.6	Differentials with Log Poles	81
3.2	The General Case: Via the h -Topology	83
3.3	The General Case: Alternative Approaches	87
3.3.1	Deligne's Method	87
3.3.2	Hartshorne's Method	90
3.3.3	Using Geometric Motives	91
3.3.4	The Case of Divisors with Normal Crossings	94
4	Holomorphic de Rham Cohomology	97
4.1	Holomorphic de Rham Cohomology	97
4.1.1	Definition	97
4.1.2	Holomorphic Differentials with Log Poles	99
4.1.3	GAGA	100
4.2	Holomorphic de Rham Cohomology via the h' -Topology	102
4.2.1	h' -Differentials	102
4.2.2	Holomorphic de Rham Cohomology	103
4.2.3	GAGA	104
5	The Period Isomorphism	107
5.1	The Category $(k, \mathbb{Q})\text{-Vect}$	107
5.2	A Triangulated Category	108
5.3	The Period Isomorphism in the Smooth Case	109
5.4	The General Case (via the h' -Topology)	111
5.5	The General Case (Deligne's Method)	113

6	Categories of (Mixed) Motives	117
6.1	Pure Motives	117
6.2	Geometric Motives	119
6.3	Absolute Hodge Motives	124
6.4	Mixed Tate Motives	129
 Part II Nori Motives		
7	Nori's Diagram Category	137
7.1	Main Results	137
7.1.1	Diagrams and Representations	137
7.1.2	Explicit Construction of the Diagram Category	139
7.1.3	Universal Property: Statement	140
7.1.4	Discussion of the Tannakian Case	144
7.2	First Properties of the Diagram Category	145
7.3	The Diagram Category of an Abelian Category	149
7.3.1	A Calculus of Tensors	150
7.3.2	Construction of the Equivalence	156
7.3.3	Examples and Applications	164
7.4	Universal Property of the Diagram Category	165
7.5	The Diagram Category as a Category of Comodules	168
7.5.1	Preliminary Discussion	168
7.5.2	Coalgebras and Comodules	169
8	More on Diagrams	177
8.1	Multiplicative Structure	177
8.2	Localisation	188
8.3	Nori's Rigidity Criterion	191
8.4	Comparing Fibre Functors	195
8.4.1	The Space of Comparison Maps	196
8.4.2	Some Examples	201
8.4.3	The Description as Formal Periods	204
9	Nori Motives	207
9.1	Essentials of Nori Motives	207
9.1.1	Definition	207
9.1.2	Main Results	209
9.2	Yoga of Good Pairs	212
9.2.1	Good Pairs and Good Filtrations	212
9.2.2	Čech Complexes	213
9.2.3	Putting Things Together	216
9.2.4	Comparing Diagram Categories	218

9.3	Tensor Structure	220
9.3.1	Collection of Proofs	225
9.4	Artin Motives	226
9.5	Change of Fields	228
10	Weights and Pure Nori Motives	233
10.1	Comparison Functors	233
10.2	Weights and Nori Motives	236
10.2.1	André's Motives	237
10.2.2	Weights	238
10.3	Tate Motives	241
Part III Periods		
11	Periods of Varieties	247
11.1	First Definition	247
11.2	Periods for the Category $(k, \mathbb{Q})\text{-Vect}$	250
11.3	Periods of Algebraic Varieties	253
11.3.1	Definition	253
11.3.2	First Properties	255
11.4	The Comparison Theorem	256
11.5	Periods of Motives	258
12	Kontsevich–Zagier Periods	261
12.1	Definition	261
12.2	Comparison of Definitions of Periods	265
13	Formal Periods and the Period Conjecture	273
13.1	Formal Periods and Nori Motives	273
13.2	The Period Conjecture	277
13.2.1	Formulation in the Number Field Case	278
13.2.2	Consequences	279
13.2.3	Special Cases and the Older Literature	282
13.2.4	The Function Field Case	284
13.3	The Case of 0-Dimensional Varieties	287
Part IV Examples		
14	Elementary Examples	289
14.1	Logarithms	291
14.2	More Logarithms	293
14.3	Quadratic Forms	294
14.4	Elliptic Curves	297
14.5	Periods of 1-Forms on Arbitrary Curves	301

15 Multiple Zeta Values	307
15.1 A ζ -value, the Basic Example	307
15.2 Definition of Multiple Zeta Values	310
15.3 Kontsevich's Integral Representation	312
15.4 Relations Among Multiple Zeta Values	314
15.5 Multiple Zeta Values and Moduli Space of Marked Curves	320
15.6 Multiple Polylogarithms	321
15.6.1 The Configuration	322
15.6.2 Singular Homology	323
15.6.3 Smooth Singular Homology	326
15.6.4 Algebraic de Rham Cohomology and the Period Matrix of (X, D)	327
15.6.5 Varying the Parameters a and b	331
16 Miscellaneous Periods: An Outlook	337
16.1 Special Values of L -Functions	337
16.2 Feynman Periods	341
16.3 Algebraic Cycles and Periods	343
16.4 Periods of Homotopy Groups	347
16.5 Exponential Periods	349
16.6 Non-periods	350
Glossary	355
References	359
Index	369
