Preface	ix
Contributors	xiii
1 Elementary Micromechanics of Heterogeneous Media	1
<i>Konstantin Z. Markov</i>	
1.1 Introduction	2
1.2 The homogenization problem	21
1.3 Some basic results	53
1.4 The single inclusion problem	85
1.5 One-particle approximations	105
1.6 Elastic properties of polycrystals	139
1.7 References	146
2 Diffusion-Absorption and Flow Processes in Disordered Porous Media	163
<i>Salvatore Torquato</i>	
2.1 Introduction	164
2.2 Microstructure functions	168
2.3 Steady-state trapping problem	172
2.4 Time-dependent trapping problem	175
2.5 Steady-state fluid permeability problem	181
2.6 Time-dependent flow problem	185
2.7 Variational principles for trapping problem	187
2.8 Variational principles for flow problem	195
2.9 Bounds on trapping constant	202

2.10	Bounds on fluid permeability	215
2.11	Cross-property relations	224
2.12	References	235
3	Self-Consistent Methods in the Problem of Wave Propagation through Heterogeneous Media	241
	<i>Sergei K. Kanaun</i>	
3.1	Introduction	242
3.2	The main hypotheses of the methods	245
3.3	Integral equation of the diffraction problem	250
3.4	General scheme of the effective field method	253
3.5	General scheme of versions I and II of the EMM for matrix composite materials	259
3.6	The solutions of the one-particle problems of version I of the EMM and of the EFM	263
3.7	Asymptotics of the solutions of the dispersion equations	267
3.8	Versions II and III of the EMM in the case of spherical inclusions	272
3.9	Version I of the EMM and the EFM in the case of isotropic random sets of inclusions	279
3.10	Versions I, II, and III of the EMM for matrix composite materials	286
3.11	An approximate solution of the one-particle problem	290
3.12	The EFM for composites with regular lattices of spherical inclusions	296
3.13	Versions I and IV for polycrystals and granular materials	306
3.14	Discussion	311
3.15	Conclusions	314
3.16	References	315
4	Deformable Porous Media and Composites Manufacturing	321
	<i>Angiolo Farina and Luigi Preziosi</i>	
4.1	Introduction	322
4.2	Ensemble average approach	329

4.3	Effective media approach	341
4.4	Deformable and saturated porous media models	352
4.5	Boundary conditions	356
4.6	One-dimensional infiltration	363
4.7	Simulations	374
4.8	Three-dimensional unsaturated isothermal model . . .	385
4.9	Open problems	395
4.10	References	398
5	Micromechanics of Poroelastic Rocks	411
	<i>Robert W. Zimmerman</i>	
5.1	Introduction	411
5.2	Hydrostatic poroelasticity	413
5.3	Undrained compression	421
5.4	Constitutive equations of linearized poroelasticity . . .	425
5.5	Equations of stress equilibrium and fluid flow	431
5.6	Dependence of poroelastic parameters on pore structure	440
5.7	Conclusions and future directions	459
5.8	References	461
	Index	471
