Contents

1 **Introduction** 1

2 **The Early Era** 5
- 2.1 The Development of the Principles of Mechanics 6
- 2.2 The Dynamics of Rigid Bodies 12
- 2.3 The Theory of Ideal Fluids 16
- 2.4 Euler's Description of a Porous Body 23
- 2.5 Coulomb's Earth Pressure Theory 25
- 2.6 Woltman's Contribution to the Porous Media Theory: The Introduction of the Angle of Internal Friction and the Volume Fraction Concept 31
- 2.7 Concluding Remarks 45
- 2.8 Biographical Notes 46

3 **The Classical Era** 69
- 3.1 Cauchy's Formulation of the Stress Concept 70
  - 3.1.1 Cauchy's Predecessors 70
  - 3.1.2 The Final Step 72
  - 3.1.3 Biographical notes 75
- 3.2 The Development of the Linear Elasticity Theory 78
  - 3.2.1 Theoretical Molecular Formulations 79
  - 3.2.2 Continuum Mechanics Approach 85
  - 3.2.3 Completion of the Theory 86
  - 3.2.4 Some Solutions of the Fundamental Equations 89
  - 3.2.5 Final Remarks 91
  - 3.2.6 Biographical Notes 93
- 3.3 Discovery of Fundamental Laws (Delesse, Fick, Darcy) 95
  - 3.3.1 The Delessian Law 96
  - 3.3.2 Fick's Law 97
  - 3.3.3 Darcy's Law 99
  - 3.3.4 Biographical Notes 101

3.4 The Development of the Theory of Viscous Fluids 102
3.4.1 Introduction: The Navier-Stokes Equations 102
3.4.2 The Historical Development of the Theory 103
3.4.3 Biographical Notes 110
3.5 The Mohr-Coulomb Failure Condition and other Plasticity Theory Studies 112
3.5.1 W.J. Macquorn Rankine's Fundamental Failure Condition for Granular Material 113
3.5.2 O. Mohr's Contributions to the Determination of the Elasticity and Failure Limits 118
3.5.3 Extension of the Plasticity Theory 122
3.5.4 Biographical Notes 132
3.6 Motion of Liquids in Rigid Porous Solids 135
3.6.1 Motion of Liquids Through Narrow Tubes 136
3.6.2 Flow of a Liquid Through Porous Bodies with Statistically-Distributed Pores 138
3.6.3 Application 139
3.7 Foundation of the Mixture Theory 140
3.7.1 Introduction 140
3.7.2 Stefan's Development of the Mixture Theory 141
3.7.3 Biographical notes 145
3.8 The Foundation of Thermodynamics 146
3.8.1 Development in the Early Days 147
3.8.2 The Achievements of Carnot (1796–1832) and Clapeyron (1799–1864) 149
3.8.3 Robert Mayer, the Discoverer of the Mechanical Equivalent of Heat 154
3.8.4 The Contributions of Mohr, Séguin, Colding, Holtzmann, and Helmholtz 159
3.8.5 The Decisive Investigations of Joule 163
3.8.6 The Foundation of Thermodynamics by Clausius, Rankine and Thomson 164
3.8.7 Discussions on the Correct Form of the Mechanical Theory of Heat and Further Developments 176
3.8.8 Biographical Notes 178

4 The Modern Era **187**
4.1 Discovery of Fundamental Effects of Liquid-Saturated Rigid Porous Solids 188
4.2 The Treatment of the Liquid-Saturated Deformable Porous Solid by von Terzaghi 201
4.3 The Foundation of Modern Porous Media Theory by Fillunger 209

4.4 The Tragic Controversy Between the Viennese Professors Fillunger and von Terzaghi in 1936/37 213
4.5 The Further Development of the Viennese Affair and in Soil Mechanics 246
4.6 Biographical Notes 260
4.7 The Followers of von Terzaghi and Fillunger: Biot, Heinrich and Frenkel 284
4.7.1 Biot's Theory 285
4.7.2 Heinrich's Theory 297
4.7.3 Frenkel's Description of Moist Soil 301
4.7.4 Further Developments 303
4.7.5 Biographical Notes 305
4.8 Further Development of the Elasticity and Plasticity Theories . 307
4.8.1 Elasticity Theory 307
4.8.2 Plasticity Theory 311
4.9 Modern Continuum Mechanics and Mixture Theory 318
4.10 Theories of Immiscible Mixtures 321

5 Current State of Porous Media Theory 331
5.1 Introductory Remarks to Porous Media Theory 331
5.2 The Volume Fraction Concept 332
5.3 Kinematics 336
5.4 Balance Equations 345
5.4.1 Balance of Mass 345
5.4.2 Balance of Momentum and Moment of Momentum . . 347
5.4.3 Balance of Energy 349
5.5 Entropy Inequality 351
5.6 The Closure Problem and the Saturation Constraint 353
5.7 Principle of Virtual Work 356
5.8 Constitutive Theory 358
5.8.1 Principle of Material Objectivity 359
5.8.2 The Introduction and Evaluation of the Entropy Inequality for a General Binary Porous Medium Model 362
a) The Introduction and Evaluation of the Entropy Inequality for a Binary Porous Medium Model with Incompressible Constituents 365
b) The Introduction and Evaluation of the Entropy Inequality for a Binary Porous Model with Compressible Constituents 367

c) The Introduction and Evaluation of the Entropy Inequality for a Binary Porous Medium Model with Compressible Solid and Incompressible Fluid Constituents (Hybrid Model of First Type) 369
d) The Introduction and Evaluation of the Entropy Inequality for a Binary Porous Medium Model with Incompressible Solid and Compressible Fluid Constituents (Hybrid Model of Second Type) . . . 374
e) Additional Remarks 375
5.8.3 Thermoelastic Compressible Porous Solid Filled with an Incompressible Viscous Fluid 377
5.8.4 Rigid Ideal-Plastic Porous Solid Filled with an Inviscid Compressible Fluid 385
5.8.5 Elastic-Plastic Behavior of an Incompressible Porous Solid Filled with an Incompressible Inviscid Fluid . . . 390
5.8.6 Constitutive Relations and Transport Phenomena in Fluid-Saturated Rigid Porous Solids 404
a) Heat Conduction 406
b) Motion of an Incompressible, Viscous Fluid 408
c) Further Transport Phenomena: Diffusion, Capillarity, Filtration, and Motion of Moisture . . 415
5.9 Applications 417
5.9.1 Uplift, Friction and Capillarity: three Fundamental Effects for Liquid-Saturated Porous Solids 419
5.9.2 One-Dimensional Transient Wave Propagation in Fluid-Saturated Incompressible Porous Media 422
a) Field Equations 424
b) One-Dimensional Transient Wave Propagation Solution 426
c) General Properties of the Analytical Solution . . . 429
d) An Illustrative Example of a One-Dimensional Soil Column Subject to three Different Surface Loadings 430
5.9.3 One-Dimensional Consolidation (von Terzaghi's Differential Equation) 446
5.9.4 The Elastic-Plastic Compaction of Metallic Powders . . 456
5.9.5 Further Solutions 462

6 Conclusions and Outlook **471**

Appendix 473

A Evaluation of the Entropy Inequality 473

B Introduction to the Vector- and Tensor Calculus for Engineers 489
B 1. Introduction 489
B 2. Basic Concepts 490
B 2.1 Symbols 490
B 2.2 Einstein's Summation Convention 491
B 2.3 Kronecker Symbol 492
B 3. Vector Algebra 493
B 3.1 Vector Notion and Vector Operations 493
B 3.2 Base System 496
B 3.3 Reciprocal Base System 497
B 3.4 Covariant and Contravariant Coefficients of the Vector Components 498
B 3.5 Physical Coefficients of a Vector 499
B 4. Tensor Algebra 500
B 4.1 Tensor Notion (Linear Mapping) 500
B 4.2 Algebra in Base Systems 502
B 4.3 Scalar Product of Tensors 507
B 4.4 Tensor Product 509
B 4.5 Special Tensors and Operations 511
B 4.5.1 Inverse Tensor 511
B 4.5.2 Transposed Tensor 512
B 4.5.3 Symmetrical and Skew-Symmetrical Tensors . 513
B 4.5.4 Orthogonal Tensor 514
B 4.5.5 Trace of the Tensor 515
B 4.6 Decomposition of the Tensor 516
B 4.6.1 Additive Decomposition 516
B 4.6.2 Multiplicative Decomposition (Polar Decomposition) 517
B 4.7 Change of the Base 519
B 4.8 Higher-Order Tensors 521
B 4.8.1 Introduction of Higher-Order Tensors 521
B 4.8.2 Special Operations and Tensors 523
B 4.8.3 Algebra in Base Systems 525
B 4.9 Cross Product 525
B 4.9.1 Cross Product of Vectors 526
B 4.9.2 Cross Tensor Product of Vector and Tensor . 532
B 4.9.3 Cross Tensor Product of Tensors 533
B 4.9.4 Cross Vector Product of Tensors 535
B 4.9.5 Special Tensors and Operations 536

B 4.10 Fundamental Tensors 540
B 5. Vector and Tensor Analysis 544
B 5.1 Functions of Scalar Parameters 545
B 5.2 Field Theory 547
B 5.2.1 Gradient 547
B 5.2.2 Derivatives of Higher-Order 550
B 5.2.3 Special Operations (Divergence, Rotation, and the Laplace-Operator) 551
B 5.3 Functions of Vector and Tensor Variables 553
B 5.4 Integral Theorems 557
B 5.4.1 Transformation of Surface Integrals into Volume Integrals 557
B 5.4.2 Transformation of Line Integrals into Surface Integrals 558

C Geometric Representation of the Principal Stresses, the Stress Invariants and the Mohr-Coulomb Theory 561
C 1. Preliminaries 561
C 2. Triaxial Plane 563
C 3. Octahedral Plane 565
C 4. Geometric Representation of Yield Functions 566
C 5. Subspace of the Stress State 568
C 6. Mohr-Coulomb Theory 570
C 6.1 *Coulomb's Strength Hypothesis for Arbitrarily Oriented Surfaces* 570
