Preface	xvii
1 Graphs and Their Complements	1
1.1 Introduction	1
Exercises	6
1.2 Degree sequences	8
1.2.1 Havel-Hakimi theorem	14
1.2.2 Erdős-Gallai theorem	15
Exercises	17
1.3 Analysis	18
Exercises	20
1.4 Notes	21
2 Paths and Walks	23
2.1 Introduction	23
2.2 Complexity	26
Exercises	27
2.3 Walks	28
Exercises	28
2.4 The shortest-path problem	29
2.5 Weighted graphs and Dijkstra's algorithm	33
Exercises	35
2.6 Data structures	36
2.7 Floyd's algorithm	41
Exercises	43
2.8 Notes	43
3 Subgraphs	45
3.1 Counting subgraphs	45
3.1.1 Möbius inversion	46
3.1.2 Counting triangles	49
3.2 Multiplying subgraph counts	50
3.3 Mixed subgraphs	52
3.4 Graph reconstruction	53
3.4.1 Nash-Williams' lemma	54
Exercises	56

3.5	Notes	56
4	Some Special Classes of Graphs	57
4.1	Bipartite graphs	57
	Exercises	58
4.2	Line graphs	59
	Exercises	60
4.3	Moore graphs	62
	Exercises	66
4.4	Euler tours	67
4.4.1	An Euler tour algorithm	68
	Exercises	71
4.5	Notes	72
5	Trees and Cycles	73
5.1	Introduction	73
	Exercises	74
5.2	Fundamental cycles	74
	Exercises	74
5.3	Co-trees and bonds	76
	Exercises	78
5.4	Spanning tree algorithms	80
5.4.1	Prim's algorithm	81
5.4.1.1	Data structures	83
	Exercises	84
5.4.2	Kruskal's algorithm	85
5.4.2.1	Data structures and complexity	85
5.4.3	The Cheriton-Tarjan algorithm	86
	Exercises	87
5.4.4	Leftist binary trees	88
	Exercises	94
5.5	Notes	94
6	The Structure of Trees	97
6.1	Introduction	97
6.2	Non-rooted trees	98
	Exercises	100
6.3	Read's tree encoding algorithm	100
6.3.1	The decoding algorithm	103
	Exercises	104
6.4	Generating rooted trees	105
	Exercises	112
6.5	Generating non-rooted trees	113
	Exercises	114
6.6	Prüfer sequences	114
6.7	Spanning trees	116

6.8	The matrix-tree theorem	118
	Exercises	123
6.9	Notes	124
7	Connectivity	125
7.1	Introduction	125
	Exercises	127
7.2	Blocks	128
7.3	Finding the blocks of a graph	131
	Exercises	132
7.4	The depth-first search	134
	7.4.1 Complexity	140
	Exercises	140
7.5	Sections and modules	141
	Exercises	144
7.6	Notes	144
8	Graphs and Symmetry	147
8.1	Groups	147
8.2	Cayley graphs	150
8.3	Coset diagrams	152
	8.3.1 Double cosets	154
8.4	Conjugation, Sylow subgroups	156
8.5	Homomorphisms	158
8.6	Primitivity and block systems	159
	Exercises	160
8.7	Self-complementary graphs	161
8.8	Pseudo-similar vertices	163
	Exercises	166
8.9	Notes	166
9	Alternating Paths and Matchings	169
9.1	Introduction	169
	Exercises	172
9.2	The Hungarian algorithm	173
	9.2.1 Complexity	176
	Exercises	177
9.3	Edmonds' algorithm, blossoms	177
	9.3.1 Complexity	182
9.4	Perfect matchings and 1-factorizations	182
	Exercises	185
9.5	The subgraph problem	185
9.6	Coverings in bipartite graphs	187
9.7	Tutte's theorem	188
	Exercises	190
9.8	Notes	191

10 Network Flows	193
10.1 Introduction	193
10.2 The Ford-Fulkerson algorithm	197
Exercises	205
10.3 Matchings and flows	206
Exercises	207
10.4 Menger's theorems	208
Exercises	210
10.5 Disjoint paths and separating sets	210
Exercises	212
10.6 Notes	215
11 Hamilton Cycles	217
11.1 Introduction	217
Exercises	220
11.2 The crossover algorithm	220
11.2.1 Complexity	223
Exercises	225
11.3 The Hamilton closure	226
Exercises	228
11.4 The extended multi-path algorithm	229
11.4.1 Data structures for the segments	232
Exercises	233
11.5 Decision problems, NP-completeness	233
Exercises	241
11.6 The traveling salesman problem	242
Exercises	244
11.7 The Δ TSP	244
11.8 Christofides' algorithm	246
Exercises	248
11.9 Notes	249
12 Digraphs	251
12.1 Introduction	251
12.2 Activity graphs, critical paths	251
12.3 Topological order	253
Exercises	256
12.4 Strong components	256
Exercises	257
12.4.1 An application to fabrics	262
Exercises	263
12.5 Tournaments	264
12.5.1 Modules	265
Exercises	266
12.6 2-Satisfiability	266
Exercises	269

12.7	Notes	269
13	Graph Colorings	271
13.1	Introduction	271
13.1.1	Intersecting lines in the plane	273
	Exercises	274
13.2	Cliques	274
13.3	Mycielski's construction	278
13.4	Critical graphs	279
	Exercises	280
13.5	Chromatic polynomials	281
	Exercises	282
13.6	Edge colorings	283
	Exercises	291
13.7	Graph homomorphisms	291
	Exercises	296
13.8	NP-completeness	297
13.9	Notes	304
14	Planar Graphs	305
14.1	Introduction	305
14.2	Jordan curves	306
14.3	Graph minors, subdivisions	307
	Exercises	311
14.4	Euler's formula	311
14.5	Rotation systems	313
14.6	Dual graphs	315
14.7	Platonic solids, polyhedra	319
	Exercises	320
14.8	Triangulations	321
14.9	The sphere	324
	Exercises	325
14.10	Whitney's theorem	325
14.11	Medial digraphs	329
	Exercises	331
14.12	The 4-color problem	332
14.13	Nowhere-zero flows	335
	Exercises	337
14.14	Straight-line drawings	337
14.15	Coordinate averaging	340
14.16	Kuratowski's theorem	342
	Exercises	344
14.17	The Hopcroft-Tarjan algorithm	346
14.17.1	Bundles	349
14.17.2	Switching bundles	350
14.17.3	The general Hopcroft-Tarjan algorithm	353

14.18 Notes	356
15 Graphs and Surfaces	359
15.1 Introduction	359
15.2 Surfaces	361
15.2.1 Handles and crosscaps	367
15.2.2 The Euler characteristic and genus of a surface	368
Exercises	371
15.3 Isometries of surfaces	372
Exercises	375
15.4 Graph embeddings, obstructions	376
15.5 Graphs on the torus	377
Exercises	385
15.5.1 Platonic maps on the torus	387
15.5.2 Drawing torus maps, triangulations	389
Exercises	392
15.6 Coordinate averaging	394
15.7 Graphs on the projective plane	395
15.7.1 The facewidth	402
15.7.2 Double covers	405
Exercises	410
15.8 Embedding algorithms	412
Exercises	421
15.9 Heawood's map coloring theorem	421
Exercises	423
15.10 Notes	424
16 The Klein Bottle and the Double Torus	425
16.1 The Klein bottle	425
16.1.1 Rotation systems	426
16.1.2 The double cover	435
Exercises	436
16.2 The double torus	437
16.2.1 Isometries of the hyperbolic plane	440
Exercises	441
16.2.2 The double torus as an octagon	441
Exercises	447
16.3 Notes	448
17 Linear Programming	451
17.1 Introduction	451
17.1.1 A simple example	451
17.1.2 Simple graphical example	452
17.1.3 Slack and surplus variables	455
Exercises	457
17.2 The simplex algorithm	458

17.2.1	Overview	458
17.2.2	Some notation	458
17.2.3	Phase 0: finding a basis solution	459
17.2.4	Obtaining a basis feasible solution	460
17.2.5	The tableau	461
17.2.6	Phase 2: improving a basis feasible solution	462
17.2.7	Unbounded solutions	466
17.2.8	Conditions for optimality	467
17.2.9	Phase 1: initial basis feasible solution	469
17.2.10	An example	472
17.3	Cycling	474
Exercises	476
17.4	Notes	476
18	The Primal-Dual Algorithm	479
18.1	Introduction	479
18.2	Alternate form of the primal and its dual	484
18.3	Geometric interpretation	485
18.3.1	Example	486
18.4	Complementary slackness	490
18.5	The dual of the shortest-path problem	491
Exercises	494
18.6	The primal-dual algorithm	494
18.6.1	Initial feasible solution	498
18.6.2	The shortest-path problem	500
18.6.3	Maximum flow	503
Exercises	505
18.7	Notes	506
19	Discrete Linear Programming	507
19.1	Introduction	507
19.2	Backtracking	508
19.3	Branch and bound	511
Exercises	521
19.4	Totally unimodular matrices	523
Exercises	525
19.5	Notes	525
	Bibliography	527
	Index	539
