

Contents

Chapter 1. Introduction	1
Chapter 2. Physical motivations	5
2.1. Overview	5
2.2. Von Neumann measurements	6
2.3. Weak values and weak measurements - the main idea	8
2.4. Weak values and weak measurements - mathematical aspects	12
2.5. Large weak values and superoscillations	16
Chapter 3. Basic mathematical properties of superoscillating sequences	25
3.1. Superoscillating sequences	25
3.2. Test functions and their Fourier transforms	33
3.3. Approximations of functions in $\mathcal{S}(\mathbb{R})$	35
Chapter 4. Function spaces of holomorphic functions with growth	39
4.1. Analytically Uniform spaces	39
4.2. Convolutors on Analytically Uniform spaces	44
4.3. Dirichlet series	45
Chapter 5. Schrödinger equation and superoscillations	49
5.1. Schrödinger equation for the free particle	50
5.2. Approximation by gaussians and persistence of superoscillations	56
5.3. Quantum harmonic oscillator	58
Chapter 6. Superoscillating functions and convolution equations	63
6.1. Convolution operators for generalized Schrödinger equations	63
6.2. Formal solutions to Cauchy problems for linear constant coefficients differential equations	70
6.3. Differential equations of non-Kowalevski type	71
6.4. An application to the harmonic oscillator	74
Chapter 7. Superoscillating functions and operators	81
7.1. A quick review on operators	81
7.2. Superoscillations and operators	83
Chapter 8. Superoscillations in $SO(3)$	89
8.1. The weak value of the operator $\exp(i\hat{\mathcal{L}}_z^{(N)} \delta\varphi)$	89
8.2. Asymptotic expansion for the Wigner functions	96
Bibliography	99
Index	107
