

# CONTENTS

Preface .....	xix
Acronyms .....	xxiii
<b>1 EVOLVING MOBILE NETWORKS .....</b>	<b>1</b>
1.1 The Growth of Mobile Communications .....	1
1.1.1 Convergence of Fixed and Mobile Networks .....	3
1.2 Third Generation Mobile System Requirements .....	4
1.2.1 UMTS Services Aspects .....	5
1.2.2 UMTS Terrestrial Radio Access Aspects .....	6
1.3 Enhancing Technologies .....	8
1.3.1 Capacity Increasing Antennas .....	8
1.3.2 Multi-user Detection Techniques .....	9
1.3.3 Software Radio Applications .....	9
1.3.4 Implementation and Integration Aspects .....	10
1.4 Conclusions .....	11
References .....	11
<b>2 SYSTEM ANALYSIS FUNDAMENTALS .....</b>	<b>13</b>
2.1 Fundamentals of System Analysis .....	13
2.1.1 Multiple Access Options .....	13
2.1.1.1 Narrow-band Digital Channel Systems .....	13
2.1.1.2 Wide-band Digital Channel Systems .....	14
2.1.1.3 The UTRA FDD Mode: WCDMA .....	14
2.1.1.4 The UTRA TDD Mode: TD/CDMA .....	15
2.1.2 Signal Processing Aspects .....	16
2.1.2.1 The Spread Spectrum Concept .....	16
2.1.2.2 Modulation and Spreading Principles .....	17
2.1.2.3 CDMA System Performance .....	21
2.1.2.4 Pseudorandom Sequences .....	23
2.1.2.5 Power Control Characteristics .....	24
2.1.2.6 Soft Handovers Characteristics .....	24
2.2 The 3G Communications Environment .....	25
2.2.1 Mapping High Level Requirements onto Test Environments .....	25
2.2.1.1 Reference Services .....	25
2.2.2 Channel Types .....	26
2.2.3 Indoor Office .....	26
2.2.4 Outdoor to Indoor and Pedestrian .....	28

2.2.5	Vehicular .....	31
2.2.6	Mixed.....	33
2.2.6.1	Long-term Fading Decorrelation Length.....	34
2.2.7	Channel Impulse Response .....	34
2.2.8	Traffic Types and Propagation Models.....	37
2.2.8.1	Packet or Non-real Time Services.....	37
2.3	Concluding Remarks.....	39
	References.....	39

### **3 THE UMTS DEVELOPMENT PLATFORM ..... 41**

3.1	Architecture and Deployment Scenarios.....	41
3.1.1	The UMTS High Level System Architecture.....	41
3.1.1.1	The UMTS Domains .....	41
3.1.1.2	The IMT 2000 Family.....	42
3.1.2	Coexistence of Present and Future Networks.....	43
3.2	The Core Network Domain.....	44
3.2.1	Network Evolution Towards UMTS.....	44
3.2.1.1	Main Packet Switched Network Elements .....	46
3.2.1.2	Open Interfaces .....	47
3.2.2	Key Release 99 Architectural Requirements.....	49
3.2.3	The R99 Core Network Synthesis.....	49
3.2.4	Circuit Switched (CS) Network Elements (NE).....	50
3.2.4.1	The 3G Mobile Switching Centre (3GMSC).....	50
3.2.4.2	The 3G Home Location Register.....	51
3.2.4.3	New Services.....	51
3.2.5	Packet Switched (PS) Network Elements (NE).....	52
3.2.5.1	3G Serving GPRS Support Node (3G SGSN).....	52
3.2.5.2	The Gateway GPRS Support Node (GGSN).....	53
3.2.5.3	Charging, Border and Lawful Interception Gateways .....	54
3.2.5.4	DNS, DHCP and the IP Backbone .....	54
3.2.5.5	Network Connectivity in the 3G Packet Core .....	54
3.2.5.6	Implementing Quality of Service (QoS).....	55
3.2.5.7	Implementing Ipv6.....	56
3.2.6	Coexistence Interoperability Issues.....	56
3.2.6.1	Iu Interface Inter-Working Characteristics.....	57
3.3	The Access Network Domain .....	58
3.3.1	UTRAN Architecture.....	58
3.4	UTRAN Identifiers and Functions .....	59
3.4.1	Identifiers .....	59
3.4.2	System Access Control .....	60
3.4.2.1	Admission and Congestion Control.....	60
3.4.2.2	System Information Broadcasting .....	61
3.4.3	Radio Channel Ciphering and Deciphering.....	61
3.4.4	Mobility Functions.....	61
3.4.4.1	Handover.....	61
3.4.4.2	SRNS Relocation .....	61
3.4.5	Radio Resource Management and Control Functions .....	62

3.4.5.1	Radio Resource Configuration .....	62
3.4.5.2	Radio Environment Survey .....	62
3.4.5.3	Macro-diversity Control – FDD .....	62
3.4.5.4	TDD – Dynamic Channel Allocation (DCA) .....	62
3.4.5.5	Allocation/De-allocation and Control of Radio Bearers .....	63
3.4.5.6	Radio Protocols Function .....	63
3.4.5.7	RF Power Control .....	63
3.4.5.8	Radio Channel Coding and Control .....	64
3.4.5.9	Radio Channel Decoding .....	64
3.4.5.10	Initial Random Access .....	64
3.4.5.11	NAS Core Network Distribution Functions .....	65
3.4.5.12	Timing Advance in TDD .....	65
3.4.5.13	NAS Service Specific Function .....	65
3.5	Mobility Management .....	65
3.5.1	Signalling Connection .....	65
3.5.2	Impacts of Mobility Handling .....	66
3.6	UTRAN Synchronization and O&M Requirements .....	66
3.6.1	Synchronization Model .....	66
3.6.2	Node B O&M .....	67
3.6.2.1	Implementation Specific O&M .....	67
3.6.2.2	Logical O&M .....	67
3.7	UTRAN Interfaces .....	68
3.7.1	General Protocol Model for UTRAN Interfaces .....	68
3.7.2	Horizontal Layers .....	68
3.7.3	Vertical Planes .....	68
3.7.3.1	Control Plane .....	68
3.7.3.2	User Plane .....	69
3.7.3.3	Transport Network Control Plane .....	69
3.7.3.4	Transport Network User Plane .....	69
3.8	Radio Interface Protocol Architecture .....	70
3.8.1	Protocol Structure .....	70
3.8.1.1	Service Access Points and Service Primitives .....	71
3.8.2	Services and Functions in Layer 1 .....	72
3.8.2.1	Services .....	72
3.8.2.2	L1 Functions .....	73
3.8.3	Services and Functions in Layer 2 .....	73
3.8.3.1	Services and Functions in The MAC Sub-layer .....	73
3.8.3.2	MAC Functions .....	75
3.8.3.3	RLC Services and Functions .....	76
3.8.3.4	RLC Functions .....	77
3.8.4	PDCP Services and Function .....	78
3.8.5	Broadcast/Multicast Control – Services and Functions .....	78
3.8.6	Uu Stratum Services and Functions in Layer 3 .....	79
3.8.7	The Radio Resource Control (RRC) Functions .....	79
	References .....	80
	Appendix A: UMTS Functional Domains .....	82

<b>4 THE UTRA PHYSICAL LAYER DESIGN.....</b>	<b>85</b>
4.1 Summary of Features .....	85
4.2 Dedicated and Common Transport Channels.....	88
4.2.1 Dedicated Transport Channels .....	88
4.2.2 Common Transport Channels .....	89
4.3 Configuration of FDD Physical Channels.....	89
4.3.1 Uplink and Downlink Modulation .....	90
4.3.2 Dedicated Uplink Physical Channels .....	93
4.3.2.1 Spreading DPCCH/DPDCH.....	94
4.3.3 Common Uplink Physical Channels .....	94
4.3.3.1 Physical Random Access Channel - PRACH.....	97
4.3.3.2 Physical Common Packet Channel (PCPCH) .....	98
4.3.3.3 Spreading Common Uplink Physical Channels.....	100
4.3.4 Uplink Channelization Codes .....	101
4.3.4.1 DPCCH/DPDCH Code Allocation.....	101
4.3.4.2 PRACH Message Part Code Allocation .....	101
4.3.4.3 PCPCH Message Part Code Allocation.....	101
4.3.5 Uplink Scrambling Codes .....	101
4.3.5.1 Long Scrambling Sequence.....	103
4.3.5.2 Short Scrambling Sequence .....	104
4.3.5.3 Scrambling Codes in Uplink Dedicated Physical Channels .....	105
4.3.5.4 PRACH and PCPCH Message Part Scrambling Code .....	106
4.3.5.5 Scrambling Code in the PCPCH Power Control Preamble .....	106
4.3.5.6 PRACH Preamble Codes .....	107
4.3.5.7 PCPCH Preamble Codes .....	108
4.3.6 Uplink Power Control Procedure .....	109
4.3.6.1 PRACH and DPCCH/DPDCH Power Control.....	111
4.3.6.2 Compressed Mode Power Control .....	112
4.3.6.3 DPCCH Power Control Preamble .....	113
4.3.6.4 Power Control in the PCPCH Message Part and Preamble .....	113
4.3.6.5 Power Control in the Power Control Preamble Part.....	114
4.3.7 Downlink Physical Channels .....	114
4.3.7.1 Downlink Transmit Diversity.....	114
4.3.7.2 Open Loop Transmit Diversity.....	115
4.3.7.3 Closed Loop Transmit Diversity .....	115
4.3.8 Dedicated Downlink Physical Channels .....	116
4.3.8.1 The Compressed Mode .....	117
4.3.8.2 Multi-Code Transmission.....	118
4.3.8.3 STTD in the DPCCH .....	119
4.3.8.4 Closed Loop Mode Transmit Diversity and Dedicated Channel Pilots .....	119
4.3.8.5 The Downlink DPCCH for CPCH .....	120
4.3.9 Common Downlink Physical Channels.....	120
4.3.9.1 Common Pilot Channel (CPICH).....	121
4.3.9.2 Primary Common Control Physical Channel (P-CCPCH) .....	122
4.3.9.3 Secondary Common Control Physical Channel (S-CCPCH) .....	124
4.3.9.4 Synchronization Channel (SCH).....	126
4.3.9.5 Physical Downlink Shared Channel (PDSCH).....	127
4.3.9.6 Acquisition Indicator Channel (AICH) .....	

4.3.9.7	CPCH Access Preamble Acquisition Indicator Channel (AP-AICH)	127
4.3.9.8	CPCH Collision Detection/Channel Assignment Indicator Channel	128
4.3.9.9	Paging Indicator Channel (PICH)	129
4.3.9.10	CPCH Status Indicator Channel (CSICH)	130
4.3.10	Mapping Transport Channels onto Physical Channels	130
4.3.11	Timing Relationship Between Physical Channels	131
4.3.11.1	PICH/S-CCPCH Timing Relation	132
4.3.11.2	PRACH/AICH Timing Relation	133
4.3.11.3	PCPCH/AICH Timing Relation	134
4.3.11.4	DPCH/PDSCH Timing	135
4.3.11.5	DPCCH/DPDCH Timing Relations	135
4.3.11.6	UE Uplink/Downlink Timing	135
4.3.12	Downlink Spreading	136
4.3.12.1	Downlink Channelization Codes	136
4.3.12.2	Downlink Scrambling Codes	137
4.3.12.3	Synchronization Codes	139
4.3.13	Downlink Power Control Procedure	140
4.3.13.1	DPCCH/DPDCH Downlink Power Control	140
4.3.13.2	Power Control in the Downlink Compressed Mode	141
4.3.13.3	Power Control in Site Selection Diversity Transmit (SSTD)	141
4.3.13.4	Power Control in The PDSCH, AICH, PICH, and S-CCPCH	142
4.3.14	The Compressed Mode Procedure	142
4.3.14.1	Uplink Frame Structure	143
4.3.14.2	Downlink Frame Structure	143
4.3.14.3	Transmission Time Reduction Method	143
4.3.14.4	Transmission Gap Position	144
4.3.15	Handover Procedures	145
4.3.15.1	Cell Selection/Reselection Requirements	146
4.3.15.2	Handover Requirements	146
4.3.16	Other FDD Mode Physical Layer Procedures	148
4.4	Configuration of TDD Physical Channels	149
4.4.1	Frame Structure	150
4.4.2	Dedicated Physical Channel (DPCH)	150
4.4.2.1	Downlink and Uplink Physical Channel Spreading	150
4.4.3	Burst Types	151
4.4.3.1	Transmission of TFCI	152
4.4.3.2	Midamble Transmit Power and Beam-forming/Transmit Diversity	153
4.4.4	Common Physical Channels	153
4.4.4.1	Primary and Secondary Common Control Physical Channels	153
4.4.5	The Physical Random Access Channel (PRACH)	154
4.4.6	The Synchronization Channel (SCH)	154
4.4.7	Physical Uplink/Downlink Shared Channels	155
4.4.8	The Page Indicator Channel (PICH)	155
4.4.9	Beacon Function in Physical Channels	156
4.4.10	Allocating Midamble to Physical Channels	156
4.4.11	Mapping Transport Channels onto Physical Channels	156
4.4.11.1	Dedicated Transport Channels	157
4.4.12	Mapping Common Transport Channels	157
4.4.12.1	The Broadcast Channel (BCH)	157

4.4.12.2	The Paging Channel (PCH).....	157
4.4.12.3	The Forward Channel (FACH).....	157
4.4.12.4	The Random Access Channel (RACH).....	158
4.4.12.5	Shared Channels.....	158
4.5	Spreading and Modulation in TDD.....	158
4.5.1	Modulation and Symbol Rate.....	159
4.5.2	Mapping of Bits onto Signal Point Constellation.....	159
4.5.2.1	Mapping for Burst Type 1 and 2.....	159
4.5.2.2	Mapping for PRACH Burst Type.....	159
4.5.3	Spreading Parameters and Channelization Codes.....	160
4.5.4	Scrambling Codes.....	161
4.5.5	Spreading Data Symbols and Data Blocks.....	162
4.5.6	Synchronization Codes.....	163
4.6	Multiplexing and Channel Coding.....	165
4.6.1	Error Detection and CRC Calculations.....	166
4.6.2	Transport Block Concatenation and Code Block Segmentation.....	167
4.6.3	Channel Coding.....	168
4.6.3.1	Convolutional Coding.....	169
4.6.3.2	Turbo Coding.....	170
4.6.4	Radio Frame Size Equalization.....	170
4.6.5	First Interleaving.....	170
4.6.6	Radio Frame Segmentation.....	171
4.6.6.1	Input–Output Relationship of the Radio Frame Segmentation Block in Uplink.....	171
4.6.6.2	Input–Output Relationship of Radio Frame Segmentation Block in Downlink.....	171
4.6.7	Rate Matching.....	172
4.6.8	TrCH Multiplexing.....	172
4.6.9	Discontinuous Transmission (DTX) Bits Insertion.....	172
4.6.9.1	First Insertion of DTX Indication Bits.....	173
4.6.9.2	Second Insertion of DTX Indication Bits.....	175
4.6.10	Physical Channel Segmentation.....	175
4.6.11	Second Interleaving.....	176
4.6.12	Physical Channel Mapping.....	177
4.6.12.1	Uplink and Downlink.....	177
4.6.13	Detection of the Transport Format.....	178
4.6.13.1	Blind Transport Format Detection.....	178
4.6.13.2	Transport Format Detection Based on TFCI.....	179
4.6.13.3	TFCI Operation in the Split Mode.....	181
4.6.14	Mapping of TFCI Words.....	182
4.6.15	Examples on Channel Coding and Multiplexing.....	182
4.6.15.1	Downlink FDD BCH.....	183
4.6.15.2	Speech Channel Coding in the FDD Mode.....	184
4.6.15.3	Coding FDD 64/128/384 kbps Packet Data Channels.....	185
4.6.15.4	Multiplexing of 64/128/384 kbps Packet Data and 4.1 kbps Data.....	186
References.....		188
Appendix A: DPDCH and DPCCH Fields.....		189
Appendix B: Bit Patterns Compressed Mode and $N_{\text{pilot}} = 4$ .....		189

<b>5</b>	<b>THE UTRA TRANSMISSION SYSTEM .....</b>	<b>191</b>
5.1	UMTS Spectrum Allocation .....	191
5.1.1	UTRA Frequency Bands.....	191
5.2	Radio Transmission and Reception Aspects .....	192
5.2.1	Transmit to Receive (TX-RX) Frequency Separation.....	192
5.2.2	Channel Configuration.....	192
5.3	Transmitter Characteristics .....	193
5.3.1	Maximum Output Power .....	193
5.3.1.1	User Equipment (UE) .....	193
5.3.1.2	Base Station Output Power .....	194
5.3.2	Frequency Stability.....	194
5.3.3	Output Power Dynamics.....	195
5.3.3.1	User Equipment .....	195
5.3.3.2	Base Station .....	196
5.3.4	Out-of-Synchronization Output Power Handling .....	198
5.3.5	Transmit ON/OFF Power .....	199
5.3.5.1	BS Transmit OFF Power (TDD).....	200
5.3.6	Output RF Spectrum Emissions.....	200
5.3.6.1	Occupied Bandwidth and Out of Band Emission.....	200
5.3.6.2	Spectrum Emission Mask .....	200
5.3.6.3	Adjacent Channel Leakage Power Ratio (ACLR).....	202
5.3.6.4	Spurious Emissions.....	203
5.3.6.5	Transmit Modulation and Inter-modulation .....	203
5.4	Receiver Characteristics.....	204
5.4.1	Diversity .....	204
5.4.2	Reference and Maximum Sensitivity Levels .....	204
5.4.3	Adjacent Channel Selectivity (ACS) .....	205
5.4.4	Blocking .....	205
5.4.5	Spurious Response.....	206
5.4.6	Inter-Modulation.....	207
5.4.7	Spurious Emissions Power.....	207
5.5	UTRA RF Performance Examples.....	208
5.5.1	Coexistence FDD/FDD: ACIR .....	208
5.5.1.1	Overview of Simulation Assumptions .....	208
5.5.1.2	Simulated Scenarios.....	209
5.5.1.3	Macro to Macro Multi-Operator Case.....	209
5.5.1.4	Macro to Micro Multi-Operator Case .....	210
5.5.1.5	Simulated Services.....	212
5.5.2	Description of the propagation models .....	212
5.5.2.1	Received Signal .....	212
5.5.2.2	Macro Cell Propagation Model.....	213
5.5.2.3	Micro Cell Propagation Model .....	213
5.5.3	The Simulation Process .....	215
5.5.3.1	Single Step (Snapshot) Simulation.....	215
5.5.3.2	Multiple Steps (Snapshots) Execution .....	215
5.5.4	Modeling of Handover and Power Control.....	216
5.5.4.1	Handover Modelling .....	216
5.5.4.2	Power Control Modelling of Uplink Traffic Channels.....	216

5.5.4.3	Power Control Modelling of Traffic Channels in Downlink.....	217
5.5.5	System Loading .....	219
5.5.5.1	Uplink .....	219
5.5.5.2	Downlink.....	220
5.5.5.3	Simulation Output .....	220
5.5.6	BTS Receiver Blocking and Simulation Assumptions.....	220
5.5.6.1	Simulation Scenario Assumptions for 1 and 5 km Cell Radius.....	221
5.5.6.2	Simulation Parameters for 24 dBm Terminals .....	221
5.5.6.3	Summary of Simulation Parameters.....	222
5.5.7	Example Results FDD/FDD.....	224
5.5.7.1	ACIR for 21 dBm Terminals.....	224
5.5.7.2	ACIR for 24 dBm terminals .....	225
5.5.8	BTS Receiver Blocking .....	227
5.5.8.1	Simulation Results for 1 km Cell Radius .....	227
5.5.8.2	Simulation Results for 5 km Cell Radius .....	227
5.5.9	Transmit Intermodulation for the UE.....	229
5.6	Conclusions.....	230
	References.....	230

## **6 SERVICE COMPONENTS IN UMTS..... 231**

6.1	Background.....	231
6.2	The UMTS Bearer Architecture .....	232
6.3	Quality of Service in 3rd Generation Networks .....	233
6.4	Multimedia Transmission – UMTS Traffic Classes.....	233
6.4.1	Conversational .....	233
6.4.1.1	Enabling Speech.....	233
6.4.1.2	Enabling Circuit Switched Video Telephony .....	234
6.4.1.3	Enabling Packet Switched Video Telephony .....	235
6.4.1.4	Session Initiation Protocol (SIP) .....	236
6.4.1.5	Layer Structure Enabling for Multimedia – MEGACO/H.248.....	238
6.4.1.6	IETF Signalling Transport (SIGTRAN).....	239
6.4.2	Streaming.....	239
6.4.3	Interactive .....	240
6.4.4	Background.....	240
6.4.5	Sensitivity to IP Transmission Impairments .....	240
6.5	Applications and Service Offerings .....	242
6.5.1	UMTS Generic Services .....	242
6.5.2	Family of UMTS Users.....	243
6.5.2.1	Business Subscribers.....	243
6.5.2.2	Residential Subscribers .....	243
6.5.2.3	Mass Market Subscribers .....	244
6.5.3	Cost and Services.....	244
6.5.4	UMTS Services Technology.....	244
6.5.4.1	Applications .....	245
6.6	Conclusions.....	245
	References.....	246

<b>7</b>	<b>DEPLOYING 3G NETWORKS.....</b>	<b>247</b>
7.1	Background.....	247
7.2	Network Dimensioning Principles .....	247
7.2.1	Coverage and Capacity Trade-off in the FDD Mode .....	248
7.2.1.1	Soft Handover and Orthogonality .....	249
7.3	Parameters for Multiservice Traffic .....	249
7.3.1	Circuit and Packet Switched Services.....	250
7.3.1.1	Circuit Switched (CS).....	250
7.3.1.2	Packet Switched Services .....	250
7.4	Establishing Service Models .....	252
7.5	Projecting Capacity Needs.....	253
7.6	Cellular Coverage Planning Issues.....	253
7.6.1	The Coverage Concept .....	253
7.6.2	Radio Network Parameter Assumptions .....	255
7.6.3	Circuit Switched Data Calls Assumptions .....	258
7.6.4	Packet Switched Applications .....	258
7.6.5	Characteristic of CDMA Cells.....	259
7.6.5.1	Theoretical Capacity .....	259
7.6.5.2	The Cell Loading Effect.....	259
7.6.6	Link Budgets .....	261
7.6.6.1	The Forward Link .....	261
7.6.6.2	The Reverse Link.....	263
7.6.6.3	Link Budget Elements.....	264
7.6.6.4	Link Budget for Multi-Services .....	266
7.6.7	Coverage Analysis.....	266
7.6.7.1	Uplink (UL) and Downlink (DL) Coverage.....	267
7.6.8	Capacity Analysis.....	268
7.7	Dimensioning RNC Interfaces.....	269
7.7.1	Dimensioning the Iub .....	269
7.7.1.1	Iub Total Traffic.....	270
7.7.2	RNC Capacity.....	270
7.8	Radio Network Dimensioning Field Study .....	272
7.8.1	Lower Bound Results .....	272
7.8.2	Upper Bound Results.....	273
7.8.2.1	Upper Bound Examples FDD .....	275
7.8.2.2	RNC Dimensioning for 75% Coverage.....	277
7.9	Core Network (CN) Design .....	280
7.9.1	CN Analysis Assumptions.....	280
7.9.1.1	Locating CN Nodes .....	280
7.9.1.2	Locating RNC nodes.....	280
7.9.1.3	Network Overheads .....	281
7.9.1.4	Analysis Assumptions.....	282
7.9.2	Reference Outputs in CN Dimensioning .....	282
7.9.2.1	RNC Configuration.....	283
7.9.2.2	Core Network Elements.....	283
7.10	Transmission Network Assessment .....	285
7.10.1	Building 3G Transport Systems.....	285
7.10.1.1	Present State and Future Evolution.....	285

7.10.2	Transmission Reference Network .....	287
7.10.2.1	Co-siting Transmission Sites .....	288
7.10.2.2	The Backhaul Network .....	289
7.10.2.3	The National Backbone Network .....	289
7.10.3	Transmission Dimensioning Results .....	290
7.10.3.1	Traffic per Site .....	290
7.10.3.2	Microwave Network .....	290
7.10.3.3	Leased Line Network .....	291
7.10.3.4	SDH Backbone Network .....	292
7.10.3.5	Local Switch Site Traffic .....	292
7.11	Co-locating and Sharing Sites .....	292
7.11.1	Interference Levels and De-coupling .....	293
7.11.1.1	GSM/UMTS Interference .....	294
7.11.1.2	Power Level Limitations .....	295
7.12	Co-locating Antenna Systems .....	296
7.12.1	Co-siting GSM1800 and UMTS .....	296
7.12.1.1	Single Band .....	296
7.12.1.2	Wideband Antenna .....	297
7.12.1.3	GSM 1800/UMTS Dual Band Antenna with Double Diplexers .....	297
7.12.1.4	Feeder Cables .....	297
7.13	Conclusions .....	298
	References .....	299

## **8 RESOURCE AND NETWORK MANAGEMENT ..... 301**

8.1	Introduction .....	301
8.2	Radio Resource Management and Signalling .....	301
8.2.1	Managing Power .....	301
8.2.1.1	Fast Power Control (FPC) .....	302
8.2.1.2	Power Control in Handover (HO) .....	302
8.2.1.3	Outer Loop Power Control .....	304
8.2.1.4	Conclusions .....	305
8.3	Network Management .....	305
8.3.1	Introduction .....	305
8.3.2	Network Management Characteristics .....	305
8.3.3	A Generic Functional View of a 3G NMS System .....	305
8.3.4	Main 3G Network Elements for Management .....	307
8.3.4.1	The UTRAN Building Blocks .....	307
8.3.4.2	The Core Network (CN) Building Blocks .....	308
8.3.4.3	Conclusions .....	309
8.4	UMTS Network Optimization .....	309
8.4.1	ACIR Impacts in a Multi-Operator Environment .....	310
8.4.2	Enhancing and Managing Capacity .....	311
8.4.2.1	Load Control Analysis .....	312
8.4.2.2	Conclusions .....	314
	References .....	314

<b>9</b>	<b>TOWARDS IP BASED NETWORKS</b> .....	<b>317</b>
9.1	Background.....	317
9.1.1	The UMTS Release 99 and Medium Term Architecture .....	317
9.1.1.1	Release 99.....	317
9.1.1.2	Release R4 and R5.....	317
9.1.2	The Long Term UMTS Architecture Vision.....	318
9.1.3	The All IP and Service Evolution .....	318
9.1.3.1	Transition to All IP Services .....	318
9.1.4	Classifying Releases 4 and 5 Services .....	320
9.2	Release 00 Reference Architecture .....	321
9.2.1	Overview of Release 00 Architecture .....	321
9.3	Functional Elements .....	322
9.3.1	Call State Control Function (CSCF).....	322
9.3.2	Home Subscriber Server (HSS) .....	324
9.3.3	Transport Signalling Gateway Function (T-SGW).....	325
9.3.4	Roaming Signalling Gateway Function (R-SGW).....	326
9.3.5	Media Gateway Control Function (MGCF).....	326
9.3.6	Media Gateway Function (MGW).....	326
9.3.7	Multimedia Resource Function (MRF).....	327
9.3.8	MSC and Gateway MSC Server .....	327
9.4	Reference Points .....	327
9.4.1	Cx Reference Point (HSS–CSCF) .....	327
9.4.2	Gf Reference Point (SGSN–EIR) .....	328
9.4.3	Gi (GGSN–Multimedia IP Network).....	328
9.4.4	Gn Reference Point (GGSN–SGSN) .....	328
9.4.5	Gm Reference Point (CSCF–UE).....	328
9.4.6	Mc Reference Point (MGCF–MGW) .....	328
9.4.7	Mg Reference Point (MGCF–CSCF).....	329
9.4.8	Mh Reference Point (HSS–R-SGW) .....	329
9.4.9	Mm Reference Point (CSCF–Multimedia IP networks) .....	329
9.4.10	Mr Reference Point (CSCF–MRF) .....	329
9.4.11	Ms Reference Point (CSCF–R-SGW).....	329
9.4.12	Mw Reference Point (CSCF–CSCF) .....	330
9.4.13	Nc Reference Point (MSC Server–GMSC Server) .....	330
9.4.14	Nb Reference Point (MGW–MGW).....	330
9.4.15	CAP Based Interfaces .....	330
9.4.16	Iu Reference Point .....	331
9.5	Mobility Management.....	331
9.5.1	Address Management .....	331
9.5.2	Addressing and Routing to Access IM-Subsystem Services.....	332
9.5.3	Context Activation and Registration.....	333
9.5.4	Location Management .....	334
9.5.5	Handover (HO).....	336
9.6	Registration Aspects .....	336
9.6.1	Registration Flows.....	336
9.6.1.1	Requirements and Assumptions.....	336
9.6.1.2	Registration Procedures .....	337
9.7	Multimedia Signalling .....	339

9.7.1	Support of Roaming Subscribers .....	340
9.7.2	Assignment of Serving CSCF .....	341
9.8	Service Platforms .....	341
9.8.1	VHE/OSA .....	341
9.8.1.1	Implementation Options of the VHE/OSA .....	342
9.8.2	The SIM Application Toolkit (SAT) .....	343
9.8.2.1	SAT Service Capability Server .....	344
9.9	QoS Aspects .....	344
9.9.1	End-to-End QoS Negotiation and Policy Requirements .....	344
9.9.2	QoS End-to-End Functional Architecture .....	345
9.9.2.1	IP BS Manager .....	345
9.9.2.2	IP Policy Control .....	346
9.9.2.3	Resource Manager .....	346
9.9.2.4	Implementing QoS .....	347
9.10	Transport Issues .....	348
9.10.1	Principles of Mobile Ipv4 .....	348
9.10.2	Differences between IPv4 and IPv6 .....	348
9.10.2.1	Reverse Tunnels .....	349
9.10.2.2	Use of Route Optimization .....	350
9.11	Conclusions .....	350
	References .....	350
	Index .....	351
