Preface to the Second Edition	xv
Introduction to the Translation	I
THE PHILOSOPHY OF MONEY	
Preface	53
ANALYTICAL PART	
CHAPTER I Value and Money	59
I	59
Reality and value as mutually independent categories through which our conceptions become images of the world	59
The psychological fact of objective value	62
Objectivity in practice as standardization or as a guarantee for the totality of subjective values	64
Economic value as the objectification of subjective values, as a result of establishing distance between the consuming subject and the object	65
An analogy with aesthetic value	73
Economic activity establishes distances and overcomes them	75

Contents

	<i>page</i>
II	79
Exchange as a means of overcoming the purely subjective value significance of an object	79
In exchange, objects express their value reciprocally	80
The value of an object becomes objectified by exchanging it for another object	81
Exchange as a form of life and as the condition of economic value, as a primary economic fact	82
Analysis of the theories of utility and scarcity	90
Value and price: the socially fixed price as a preliminary stage of the objectively regulated price	94
III	101
Incorporation of economic value and a relativistic world view	101
The epistemology of a relativistic world view	102
The construction of proofs in infinite series and their reciprocal legitimation	104
The objectivity of truth as well as of value viewed as a relation between subjective elements	108
Money as the autonomous manifestation of the exchange relation which transforms desired objects into economic objects, and establishes the substitutability of objects	119
Analysis of the nature of money with reference to its value stability, its development and its objectivity	122
Money as a reification of the general form of existence according to which things derive their significance from their relationship to each other	128
Chapter 2 The Value of Money as a Substance	131
I	131
The intrinsic value of money and the measurement of value	131
Problems of measurement	133
The quantity of effective money	137
Does money possess an intrinsic value?	142
The development of the purely symbolic character of money	146

	<i>page</i>
II	152
Renunciation of the non-monetary uses of monetary material	152
The first argument against money as merely a symbol: the relations of money and goods, which would make an intrinsic value for money superfluous, are not accurately determinable; intrinsic value remedies this deficiency	155
The second argument against money as merely a symbol: the unlimited augmentability of monetary symbols; relativistic indifference to the absolute limits of monetary quantity and the errors to which this indifference leads	159
The supply of money	161
The reciprocal nature of the limitation that reality places on pure concepts	165
III	168
The historical development of money from substance to function	168
Social interactions and their crystallization into separate structures; the common relations of buyer and seller to the social unit as the sociological premise of monetary intercourse	170
Monetary policy: largeness and smallness, diffuseness and concentration of the economic circle in their significance for the intrinsic character of money	172
Social interaction and exchange relations: money's functions: its facilitation of trade, its constancy as a measure of value, its mobilization and condensation of values	174
The nature of the economic circle and its significance for money	179
The transition to money's general functional character	184
The declining significance of money as substance	190
The increasing significance of money as value	198
 Chapter 3 Money in the Sequence of Purposes	 204
I	204
Action towards an end as the conscious interaction between subject and object	204
The varying length of teleological series	207
The tool as intensified means	209

Contents

	<i>page</i>
Money as the purest example of the tool	210
The unlimited possibilities for the utilization of money	212
The unearned increment of wealth	217
The difference between the same amount of money as part of a large and of a small fortune	218
Money – because of its character as pure means – as peculiarly congruent with personality types that are not closely united with social groups	221
II	228
The psychological growth of means into ends	228
Money as the most extreme example of a means becoming an end	232
Money as an end depends upon the cultural tendencies of an epoch	232
Psychological consequences of money's teleological position	235
Greed and avarice	238
Extravagance	247
Ascetic poverty	251
Cynicism	255
The blasé attitude	256
III	258
The quantity of money as its quality	259
Subjective differences in amounts of risk	260
The qualitatively different consequences of quantitatively altered causes	262
The threshold of economic awareness	264
Differential sensitivity towards economic stimuli	265
Relations between external stimuli and emotional responses in the field of money	269
Significance of the personal unity of the owner	271
The material and cultural relation of form and amount	272
The relation between quantity and quality of things, and the significance of money for this relation	277

	<i>page</i>
SYNTHETIC PART	
Chapter 4 Individual Freedom	283
I	283
Freedom exists in conjunction with duties	283
The gradations of this freedom depend on whether the duties are directly personal or apply only to the products of labour	284
Money payment as the form most congruent with personal freedom	285
The maximization of value through changes in ownership	292
Cultural development increases the number of persons on whom one is dependent and the simultaneous decrease in ties to persons viewed as individuals	295
Money is responsible for impersonal relations between people, and thus for individual freedom	297
II	303
Possession as activity	303
The mutual dependence of having and being	306
The dissolving of this dependency by the possession of money	307
Lack of freedom as the interweaving of the mental series: this lack at a minimum when the interweaving of either is with the most general of the other series	312
Its application to limitations deriving from economic interests	314
Freedom as the articulation of the self in the medium of things, that is, freedom as possession	321
The possession of money and the self	326
III	331
Differentiation of person and possession	331
Spatial separation and technical objectification through money	332
The separation of the total personality from individual work activities and the results of this separation for the evaluation of these work activities	334
The development of the individual's independence from the group	342
New forms of association brought about by money; the association planned for a purpose	343

Contents

	<i>page</i>
General relations between a money economy and the principle of individualism	347
Chapter 5 The Money Equivalent of Personal Values	355
I	355
<i>Wergild</i>	355
The transition from the utilitarian to the objective and absolute valuation of the human being	357
Punishment by fine and the stages of culture	363
The increasing inadequacy of money	366
Marriage by purchase	370
Marriage by purchase and the value of women	372
Division of labour among the sexes, and the dowry	374
The typical relation between money and prostitution, its development analogous to that of <i>wergild</i>	376
Marriage for money	380
Bribery	384
Money and the ideal of distinction	389
II	395
The transformation of specific rights into monetary claims	395
The enforceability of demands	397
The transformation of substantive values into money values	399
The negative meaning of freedom and the extirpation of the personality	400
The difference in value between personal achievement and monetary equivalent	404
III	409
'Labour money' and its rationale	409
The unpaid contribution of mental effort	411
Differences in types of labour as quantitative differences	413
Manual labour as the unit of labour	418
The value of physical activity reducible to that of mental activity	421
Differences in the utility of labour as arguments against 'labour money': the insight into the significance of money thereby afforded	425

	<i>page</i>
Chapter 6 The Style of Life	429
I	429
The preponderance of intellectual over emotional functions brought about by the money economy	429
Lack of character and objectivity of the style of life	432
The dual roles of both intellect and money: with regard to content they are supra-personal	434
The dual roles of intellect and money: with regard to function they are individualistic and egoistic	437
Money's relationship to the rationalism of law and logic	441
The calculating character of modern times	443
II	446
The concept of culture	446
The increase in material culture and the lag in individual culture	448
The objectification of the mind	452
The division of labour as the cause of the divergence of subjective and objective culture	453
The occasional greater weight of subjective culture	463
The relation of money to the agents of these opposing tendencies	468
III	470
Alterations in the distance between the self and objects as the manifestation of varying styles of life	470
Modern tendencies towards the increase and diminution of this distance	474
The part played by money in this dual process	476
Credit	479
The pre-eminence of technology	481
The rhythm or symmetry, and its opposite, of the contents of life	485
The sequence and simultaneity of rhythm and symmetry	488
Analogous developments in money	491
The pace of life, its alterations and those of the money supply	498
The concentration of monetary activity	503
The mobilization of values	505
Constancy and flux as categories for comprehending the world, their synthesis in the relative character of existence	508
Money as the historical symbol of the relative character of existence	510
Afterword: The Constitution of the Text	513
Name Index	535
