## Parallelization: Applications and Methods

|                                                                                                                                                                                    |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Resource-Aware Harris Corner Detection Based on Adaptive Pruning . . .                                                                                                             | 1  |
| <i>Johnny Paul, Walter Stechele, Manfred Kröhnert, Tamim Asfour,<br/>Benjamin Oechslein, Christoph Erhardt, Jens Schedel,<br/>Daniel Lohmann, and Wolfgang Schröder-Preikschat</i> |    |
| Victim Selection Policies for Intel TBB: Overheads and Energy<br>Footprint . . . . .                                                                                               | 13 |
| <i>Alexandru C. Iordan, Magnus Jahre, and Lasse Natvig</i>                                                                                                                         |    |
| Non-preemptive Scheduling of Real-Time Software Transactional<br>Memory . . . . .                                                                                                  | 25 |
| <i>António Barros and Luís Miguel Pinho</i>                                                                                                                                        |    |

## Self-Organization and Trust

|                                                                                                           |    |
|-----------------------------------------------------------------------------------------------------------|----|
| Trust-Enhanced Self-configuration for Organic Computing Systems . . . . .                                 | 37 |
| <i>Nizar Msadek, Rolf Kieffhaber, Bernhard Fechner, and Theo Ungerer</i>                                  |    |
| Estimation of Reward and Decision Making for Trust-Adaptive Agents<br>in Normative Environments . . . . . | 49 |
| <i>Jan Kantert, Yvonne Bernard, Lukas Klejnowski, and<br/>Christian Müller-Schloer</i>                    |    |
| An Adaptive Personal Learning Environment Architecture . . . . .                                          | 60 |
| <i>Alexander Kiy, Ulrike Lucke, and Dietmar Zoerner</i>                                                   |    |
| Middleware for Dynamically Adaptive Systems . . . . .                                                     | 72 |
| <i>Sihem Loukil, Slim Kallel, and Mohamed Jmaiel</i>                                                      |    |

## System Design I

|                                                                 |    |
|-----------------------------------------------------------------|----|
| Mahler: Sketch-Based Model-Driven Virtual Prototyping . . . . . | 85 |
| <i>Rafael Rosales, Michael Glaß, and Jürgen Teich</i>           |    |
| Formal Architecture Specification for Time Analysis . . . . .   | 98 |
| <i>Hajer Herbegue, Mamoun Filali, and Hugues Cassé</i>          |    |

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| Hardware APIs: A Software-Centric Approach for Automated Derivation of MPSoC Hardware Structures Based on Static Code Analysis ..... | 111 |
| <i>Matthias Meier, Mark Breddemann, and Olaf Spinczyk</i>                                                                            |     |

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| uBuild: Automated Testing and Performance Evaluation of Embedded Linux Systems ..... | 123 |
| <i>Fabio Erculiani, Luca Abeni, and Luigi Palopoli</i>                               |     |

## System Design II and Sensor Systems

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| A Two-Tier Design Space Exploration Algorithm to Construct a GPU Performance Predictor ..... | 135 |
| <i>S. Ali Mirsoleimani, Ali Karami, and Farshad Khunjush</i>                                 |     |

|                                                                                                                                              |     |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A Sensor Network Architecture for Urban Traffic State Estimation with Mixed Eulerian/Lagrangian Sensing Based on Distributed Computing ..... | 147 |
| <i>Edward Canepa, Enas Odat, Ahmad Dehwah, Mustafa Mousa, Jiming Jiang, and Christian Claudel</i>                                            |     |

|                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------|-----|
| From Smart Clothing to Smart Table Cloth: Design and Implementation of a Large Scale, Textile Pressure Matrix Sensor ..... | 159 |
| <i>Bo Zhou, Jingyuan Cheng, Mathias Sundholm, and Paul Lukowicz</i>                                                        |     |

## Virtualization: I/O, Memory, Cloud

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| Performance Isolation Exposure in Virtualized Platforms with PCI Passthrough I/O Sharing ..... | 171 |
| <i>Andre Richter, Christian Herber, Holm Rauchfuss, Thomas Wild, and Andreas Herkersdorf</i>   |     |

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| 3D DRAM and PCMs in Processor Memory Hierarchy .....                                             | 183 |
| <i>Krishna Kavi, Stefano Pianelli, Giandomenico Pisano, Giuseppe Regina, and Mike Ignatowski</i> |     |

|                                                                                            |     |
|--------------------------------------------------------------------------------------------|-----|
| A Service-Oriented Architecture for Virtualizing Robots in Robot-as-a-Service Clouds ..... | 196 |
| <i>Anis Koubaa</i>                                                                         |     |

## Dependability: Safety, Security, and Reliability Aspects

|                                                                 |     |
|-----------------------------------------------------------------|-----|
| Towards Code Safety with High Performance .....                 | 209 |
| <i>Ghazaleh Nazarian, Luigi Carro, and Georgi N. Gaydadjiev</i> |     |

|                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| Detecting Compromised Programs for Embedded System Applications.....                                                              | 221 |
| <i>Xiaojun Zhai, Kofi Appiah, Shoaib Ehsan, Wah M. Cheung, Gareth Howells, Huosheng Hu, Dongbing Gu, and Klaus McDonald-Maier</i> |     |
| Independent Kernel/Process Checkpointing on Non-Volatile Main Memory for Quick Kernel Rejuvenation .....                          | 233 |
| <i>Shuichi Oikawa</i>                                                                                                             |     |
| <b>Author Index</b> .....                                                                                                         | 245 |
