<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Quantum field theory</b>	<b>4</b>
2.1	Scalar field theory	4
2.2	Functional-integral solution	6
2.3	Renormalization	9
2.4	Ultra-violet regulators	12
2.5	Equations of motion for Green's functions	13
2.6	Symmetries	15
2.7	Ward identities	19
2.8	Perturbation theory	21
2.9	Spontaneously broken symmetry	25
2.10	Fermions	27
2.11	Gauge theories	28
2.12	Quantizing gauge theories	29
2.13	BRS invariance and Slavnov–Taylor identities	32
2.14	Feynman rules for gauge theories	34
2.15	Other symmetries of (2.11.7)	35
2.16	Model field theories	36
<b>3</b>	<b>Basic examples</b>	<b>38</b>
3.1	One-loop self-energy in $\phi^3$ theory	38
3.1.1	Wick rotation	39
3.1.2	Lattice	40
3.1.3	Interpretation of divergence	41
3.1.4	Computation	43
3.2	Higher order	44
3.3	Degree of divergence	45
3.3.1	$\phi^3$ at $d = 6$	47
3.3.2	Why may $Z$ be zero and yet contain divergences?	48
3.3.3	Renormalizability and non-renormalizability	49
3.4	Renormalization group	50
3.4.1	Arbitrariness in a renormalized graph	50
3.4.2	Renormalization prescriptions	52
3.5	Dimensional regularization	53
3.6	Minimal subtraction	56

3.6.1	Definition	56
3.6.2	$d = 6$	57
3.6.3	Renormalization group and minimal subtraction	58
3.6.4	Massless theories	59
3.7	Coordinate space	59
<b>4</b>	<b>Dimensional regularization</b>	<b>62</b>
4.1	Definition and axioms	64
4.2	Continuation to small $d$	68
4.3	Properties	73
4.4	Formulae for Minkowski space	81
4.4.1	Schwinger parameters	81
4.4.2	Feynman parameters	83
4.5	Dirac matrices	83
4.6	$\gamma_5$ and $\varepsilon_{\kappa\lambda\mu\nu}$	86
<b>5</b>	<b>Renormalization</b>	<b>88</b>
5.1	Divergences and subdivergences	89
5.2	Two-loop self-energy in $(\phi^3)_6$	93
5.2.1	Fig. 5.1.2	94
5.2.2	Differentiation with respect to external momenta	97
5.2.3	Fig. 5.1.3	99
5.3	Renormalization of Feynman graphs	101
5.3.1	One-particle-irreducible graph with no subdivergences	102
5.3.2	General case	103
5.3.3	Application of general formulae	105
5.3.4	Summary	106
5.4	Three-loop example	106
5.5	Forest formula	109
5.5.1	Formula	109
5.5.2	Proof	110
5.6	Relation to $\mathcal{L}$	112
5.7	Renormalizability	116
5.7.1	Renormalizability and non-renormalizability	116
5.7.2	Cosmological term	118
5.7.3	Degrees of renormalizability	118
5.7.4	Non-renormalizability	120
5.7.5	Relation of renormalizability to dimension of coupling	121
5.7.6	Non-renormalizable theories of physics	122
5.8	Proof of locality of counterterms; Weinberg's theorem	125
5.8.1	Degree of counterterms equals degree of divergence	126
5.8.2	$\bar{R}(G)$ is finite if $\delta(G)$ is negative	127
5.8.3	Asymptotic behavior	129
5.9	Oversubtractions	130
5.9.1	Mass-shell renormalization and oversubtraction	130

5.9.2	Remarks	131
5.9.3	Oversubtraction on 1PR graphs	131
5.10	Renormalization without regulators: the BPHZ scheme	133
5.11	Minimal subtraction	135
5.11.1	Definition	135
5.11.2	$\overline{\text{MS}}$ renormalization	137
5.11.3	Minimal subtraction with other regulators	137
<b>6</b>	<b>Composite operators</b>	138
6.1	Operator-product expansion	139
6.2	Renormalization of composite operators: examples	142
6.2.1	Renormalization of $\phi^2$	142
6.2.2	Renormalization of $\phi^2(x)\phi^2(y)$	145
6.3	Definitions	146
6.4	Operator mixing	149
6.5	Tensors and minimal subtraction	150
6.6	Properties	152
6.7	Differentiation with respect to parameters in $\mathcal{L}$	163
6.8	Relation of renormalizations of $\phi^2$ and $m^2$	166
<b>7</b>	<b>Renormalization group</b>	168
7.1	Change of renormalization prescription	169
7.1.1	Change of parametrization	169
7.1.2	Renormalization-prescription dependence	171
7.1.3	Low-order examples	172
7.2	Proof of RG invariance	176
7.3	Renormalization-group equation	180
7.3.1	Renormalization-group coefficients	180
7.3.2	RG equation	183
7.3.3	Solution	184
7.4	Large-momentum behavior of Green's functions	185
7.4.1	Generalizations	187
7.5	Varieties of high- and low-energy behavior	187
7.5.1	Asymptotic freedom	187
7.5.2	Maximum accuracy in an asymptotically free theory	189
7.5.3	Fixed point theories	190
7.5.4	Low-energy behavior of massless theory	191
7.6	Leading logarithms, etc.	193
7.6.1	Renormalization-group logarithms	193
7.6.2	Non-renormalization-group logarithms	196
7.6.3	Landau ghost	196
7.7	Other theories	197
7.8	Other renormalization prescriptions	200
7.9	Dimensional transmutation	203
7.10	Choice of cut-off procedure	206

7.10.1	Example: $\phi^4$ self-energy	208
7.10.2	RG coefficients	208
7.10.3	Computation of $g_0$ and $Z$ ; asymptotically free case	209
7.10.4	Accuracy needed for $g_0$	213
7.10.5	$m_0^2$	216
7.10.6	Non-asymptotically free case	216
7.11	Computing renormalization factors using dimensional regularization	217
7.12	Renormalization group for composite operators	219
<b>8</b>	<b>Large-mass expansion</b>	222
8.1	A model	224
8.2	Power-counting	225
8.2.1	Tree graphs	225
8.2.2	Finite graphs with heavy loops	226
8.2.3	Divergent one-loop graphs	226
8.2.4	More than one loop	229
8.3	General ideas	230
8.3.1	Renormalization prescriptions with manifest decoupling	231
8.3.2	Dominant regions	232
8.4	Proof of decoupling	233
8.4.1	Renormalization prescription $R^*$ with manifest decoupling	233
8.4.2	Definition of $R^*$	236
8.4.3	IR finiteness of $C^*(\Gamma)$	237
8.4.4	Manifest decoupling for $R^*$	239
8.4.5	Decoupling theorem	239
8.5	Renormalization-group analysis	240
8.5.1	Sample calculation	242
8.5.2	Accuracy	243
<b>9</b>	<b>Global symmetries</b>	244
9.1	Unbroken symmetry	245
9.2	Spontaneously broken symmetry	247
9.2.1	Proof of invariance of counterterms	249
9.2.2	Renormalization of the current	251
9.2.3	Infra-red divergences	252
9.3	Renormalization methods	253
9.3.1	Generation of renormalization conditions by Ward identities	254
<b>10</b>	<b>Operator-product expansion</b>	257
10.1	Examples	258
10.1.1	Cases with no divergences	258
10.1.2	Divergent example	260
10.1.3	Momentum space	262
10.1.4	Fig. 10.1.3 inside bigger graph	262

10.2	Strategy of proof	263
10.3	Proof	266
10.3.1	Construction of remainder	266
10.3.2	Absence of infra-red and ultra-violet divergences in $r(\Gamma)$	269
10.3.3	$R(\Gamma) - r(\Gamma)$ is the Wilson expansion	270
10.3.4	Formula for $\bar{C}(U)$	272
10.4	General case	273
10.5	Renormalization group	274
<b>11</b>	<b>Coordinate space</b>	277
11.1	Short-distance singularities of free propagator	278
11.1.1	Zero temperature	278
11.1.2	Non-zero temperature	280
11.2	Construction of counterterms in low-order graphs	281
11.3	Flat-space renormalization	286
11.4	External fields	291
<b>12</b>	<b>Renormalization of gauge theories</b>	293
12.1	Statement of results	296
12.2	Proof of renormalizability	298
12.2.1	Preliminaries	298
12.2.2	Choice of counterterms	300
12.2.3	Graphs with external derivatives	301
12.2.4	Graphs finite by equations of motion	302
12.2.5	Gluon self-energy	302
12.2.6	BRS transformation of $A_\mu^a$	303
12.2.7	Gluon self-interaction	304
12.2.8	$\delta_R c$	304
12.2.9	Quark-gluon interaction, $\delta\psi$ , $\delta\bar{\psi}$ ; introduction of $\mathcal{B}_{a\mu}$	305
12.3	More general theories	307
12.3.1	Bigger gauge group	307
12.3.2	Scalar matter	307
12.3.3	Spontaneous symmetry breaking	308
12.4	Gauge dependence of counterterms	309
12.4.1	Change of $\xi$	310
12.4.2	Change of $F_a$	313
12.5	$R_\xi$ -gauge	314
12.6	Renormalization of gauge-invariant operators	316
12.6.1	Caveat	319
12.7	Renormalization-group equation	319
12.8	Operator-product expansion	321
12.9	Abelian theories: with and without photon mass	322
12.9.1	BRS treatment of massive photon	323
12.9.2	Elementary treatment of abelian theory with photon mass	324
12.9.3	Ward identities	325

12.9.4	Counterterms proportional to $A^2$ and $\partial \cdot A^2$	326
12.9.5	Relation between $e_0$ and $Z_3$	327
12.9.6	Gauge dependence	327
12.9.7	Renormalization-group equation	329
12.10	Unitary gauge for massive photon	330
<b>13</b>	<b>Anomalies</b>	331
13.1	Chiral transformations	333
13.2	Definition of $\gamma_5$	334
13.3	Properties of axial currents	338
13.3.1	Non-anomalous currents	338
13.3.2	Anomalous currents	338
13.3.3	Chiral gauge theories	339
13.3.4	Supersymmetric theories	339
13.4	Ward identity for bare axial current	339
13.4.1	Renormalization of operators in Ward identities	340
13.5	One-loop calculations	342
13.6	Non-singlet axial current has no anomaly	346
13.6.1	Reduction of anomaly	346
13.6.2	Renormalized current has no anomalous dimension	347
13.7	Three-current Ward identity; the triangle anomaly	349
13.7.1	General form of anomaly	349
13.7.2	One-loop value	351
13.7.3	Higher orders	352
<b>14</b>	<b>Deep-inelastic scattering</b>	354
14.1	Kinematics, etc.	355
14.2	Parton model	358
14.3	Dispersion relations and moments	359
14.4	Expansion for scalar current	361
14.5	Calculation of Wilson coefficients	364
14.5.1	Lowest-order Wilson coefficients	364
14.5.2	Anomalous dimensions	365
14.5.3	Solution of RG equation – non-singlet	367
14.6	OPE for vector and axial currents	367
14.6.1	Wilson coefficients – electromagnetic case	368
14.7	Parton interpretation of Wilson expansion	369
14.8	$W_4$ and $W_5$	371
