	List of Contributors	<i>XVII</i>
	Preface	<i>XXVII</i>
1	Introduction	<i>1</i>
	<i>Georg J. Schmitz and Ulrich Prah</i>	
1.1	Motivation	<i>1</i>
1.2	What is ICME?	<i>2</i>
1.3	Industrial Needs for ICME	<i>4</i>
1.4	Present ICME	<i>9</i>
1.5	Scope of this Book	<i>11</i>
1.6	Structure of the Book	<i>13</i>
	References	<i>17</i>
2	Modeling at the Process and Component Scales	<i>19</i>
2.1	Overview of Processing Methods and Process Chains	<i>21</i>
	<i>Ralph Bernhardt and Georg J. Schmitz</i>	
2.1.1	History of Metalworking	<i>22</i>
2.1.2	History of Modeling of Manufacturing Processes	<i>23</i>
2.1.3	Overview of Processing Methods	<i>25</i>
2.1.4	Processes and Process Chains	<i>26</i>
2.1.5	Benefits of Modeling Process Chains	<i>27</i>
2.1.6	Available Modeling Tools at Component Scale	<i>29</i>
	References	<i>30</i>
	Appendix	<i>32</i>
2.2	Primary Shaping Processes	<i>35</i>
	<i>Christoph Broeckmann, Christian Hopmann, Georg J. Schmitz, Sree Koundinya Sistla, Marcel Spekowitz, Roberto Spina, and Chung Van Nguyen</i>	
2.2.1	Overview	<i>35</i>
2.2.1.1	Solidification and Crystal Growth	<i>36</i>
2.2.2	Casting	<i>36</i>

2.2.3	Plastics Processing	38
2.2.4	Sintering	41
2.2.5	Additive Manufacturing	44
2.2.6	Typical Applications of Simulations in Primary Shaping Processes	44
2.2.6.1	Casting	44
2.2.6.2	Plastics Processing	45
2.2.6.3	Sintering	46
2.2.7	Phenomena to be Modeled	48
2.2.7.1	Casting/Crystal Growth	48
2.2.7.2	Plastics Processing	50
2.2.7.3	Sintering	50
2.2.8	Basic Equations to be Solved	51
2.2.8.1	Casting/Plastics Processing	51
2.2.8.2	Sintering	52
2.2.9	Initial and Boundary Conditions	54
2.2.9.1	Casting	54
2.2.9.2	Plastics Processing	54
2.2.9.3	Sintering	55
2.2.10	Required Data and their Origin	55
2.2.10.1	Casting	55
2.2.10.2	Sintering	56
2.2.10.3	Plastics Processing	57
2.2.11	Simulation Codes in the Area of Primary Shaping	58
	References	78
	Further Reading	79
2.3	Forming Processes	81
	<i>Stephan Hojda and Markus Bambach</i>	
2.3.1	Overview: Manufacturing Process Forming	81
2.3.2	Phenomena Occurring during Forming Processes	81
2.3.2.1	Finite Strain Deformation	83
2.3.2.2	Strain Hardening	83
2.3.2.3	Contact	84
2.3.2.4	Friction	84
2.3.2.5	Instability and Damage	84
2.3.2.6	Heat Transfer	84
2.3.3	Modeling and Simulation Methods	85
2.3.4	Typical Applications of Forming Simulations	86
2.3.5	Initial and Boundary Conditions	87
2.3.6	Required Data and their Origin	88
2.3.7	Numerical Aspects	90
2.3.8	Software Codes	91
	References	93

2.4	Heat Treatment	97
	<i>Martin Hunkel</i>	
2.4.1	Introduction into Heat Treatment	97
2.4.2	Heat Transfer in and out of a Part	98
2.4.2.1	Thermal Conduction	98
2.4.2.2	Heat Transfer	99
2.4.2.3	Thermal Radiation	99
2.4.2.4	Convective Heat Transfer	100
2.4.2.5	Cooling in Vaporizing Liquids	100
2.4.2.6	Solid–Solid Heat Transfer	101
2.4.2.7	Electromagnetic Heating	101
2.4.3	Microstructure	101
2.4.3.1	Phase Transformations and Precipitations	102
2.4.3.2	Recrystallization and Grain Growth	103
2.4.4	Mechanical Behavior during Heat Treatment	104
2.4.4.1	Thermal and Transformation Strain	104
2.4.4.2	Transformation Plasticity	104
2.4.5	Thermochemical Treatment	105
2.4.5.1	Carburizing and Carbonitriding	106
2.4.5.2	Nitriding and Nitrocarburizing	106
2.4.6	Heat Treatment Simulation	107
2.4.6.1	Specific Remarks on Heat Treatment Simulations	107
2.4.6.2	Specialized Software	108
	References	109
2.5	Joining Processes	111
	<i>Ulrike Beyer, Gerson Meschut, Stephan Horstmann, and Ralph Bernhardt</i>	
2.5.1	Introduction	111
2.5.2	Basics and Definitions	112
2.5.2.1	Definition	112
2.5.2.2	Joint	112
2.5.2.3	Process	113
2.5.2.4	Joining Simulation	114
2.5.3	Welding	115
2.5.3.1	Products and Industries	115
2.5.3.2	Technical Solution Based on Structural Welding Simulation	117
2.5.4	Joining by Forming	120
2.5.4.1	Technological Overview	120
2.5.4.2	Virtual Joining Factory	124
2.5.5	Software for Joining Processes	128
	References	133

2.6	Thick Coating Formation Processes	135
	<i>Kirsten Bobzin, Mehmet Öte, Thomas Frederik Linke, and Ilkin Alkhasli</i>	
2.6.1	Overview	135
2.6.2	Typical Applications of Coating Simulations	136
2.6.3	Phenomena Occurring During Coating Formation	137
2.6.4	Basic Equations to Model the Phenomena	139
2.6.5	Initial and Boundary Conditions	140
2.6.6	Process Modeling on the Example of Thermal Spraying	140
2.6.6.1	Heat Generation in Combustion Chamber/Plasma Generator	141
2.6.6.2	Free Jet and Particle Jet	143
2.6.6.3	Particle Impact and Coating Growth on the Substrate	145
2.6.6.4	Homogenization Methods Based on Finite Elements	145
2.6.6.5	Modeling and Simulation of In-Service Coating Behavior	147
2.6.6.6	Validation of Results	147
2.6.7	Conclusion	150
2.6.8	Software Tools	151
	References	153
2.7	Thin-Film Deposition Processes	157
	<i>Andreas Pflug, Michael Siemers, Thomas Melzig, Martin Keunecke, Lothar Schäfer, and Günter Bräuer</i>	
2.7.1	Introduction	157
2.7.2	Overview of Thin-Film Deposition Methods	159
2.7.3	Modeling of Thin-Film Deposition as a Multiscale Problem	165
2.7.4	Software Codes	172
	References	186
2.8	Machining	191
	<i>André Teixeira, Markus Krömer, and Roland Müller</i>	
2.8.1	Introduction to Machining Processes	191
2.8.2	General Aspects of Machining Simulations	196
2.8.2.1	Analytic–Geometric Simulation Models	196
2.8.2.2	Finite Element Method Simulation Models	198
2.8.3	Combination of Analytic–Geometric Simulation Models and FEM Simulation Models	200
2.8.4	Simulation of Surface Integrity Modifications	201
2.8.5	Summary	204
2.8.6	Simulation Tools for Machining Processes	204
	References	207
2.9	Fatigue Modeling: From Microstructure to Component Scale	209
	<i>Mohamed Sharaf and Sebastian Münstermann</i>	
2.9.1	Influence Factors on Component Fatigue Limit	209
2.9.2	Micromechanics as a Modeling Approach	211

2.9.3	Numerical Representation of Microstructure	212
2.9.4	Cyclic Elastoplasticity of Crystals and Microsubstructures	213
2.9.5	The Notion of Fatigue Indicator Parameters (FIPs)	216
2.9.6	Fatigue Limit as a Function of Microstructure	218
2.9.7	Software Tools for Modeling Fatigue	223
	References	223
2.10	Corrosion and Its Context in Service Life	227
	<i>Daniela Zander, Daniel Höche, Johan Deconinck, and Theo Hack</i>	
2.10.1	Overview	227
2.10.2	Corrosion Modeling and Applications	229
2.10.2.1	Phenomena Occurring during Service Life	230
2.10.2.2	Multidisciplinarity	234
2.10.2.3	Mathematical Aspects (Basic Equations) of Corrosion Modeling	234
2.10.2.4	Model Input Data and Their Origin	237
2.10.3	Industrial Demands in ICME-Related Corrosion Modeling	238
2.10.4	Software Tool-Related Corrosion Modeling	240
2.10.5	Future Tasks and Limits	244
2.10.6	Acknowledgments	244
	References	244
2.11	Recycling Processes	247
	<i>Klaus Hack, Markus A. Reuter, Stephan Petersen, and Sander Arnout</i>	
2.11.1	Overview	247
2.11.2	Materials-Centric versus Product-Centric Approach	248
2.11.3	General Phenomena: LED Lamp Recycling as an Example	249
2.11.4	Methods Available	251
2.11.5	Thermochemical Aspects of Recycling	252
2.11.6	Recycling of Aluminum	255
2.11.7	Recycling of Zinc: Fuming	258
2.11.8	Valorization of “Wastes”	262
2.11.9	Summary of Simulation Tools	265
	References	266
3	Microstructure Modeling	269
	<i>Markus Apel, Robert Spatschek, Franz Roters, Henrik Larsson, Charles-André Gandin, Gildas Guillemot, Frigyes Podmaniczky, László Gránásy, Georg J. Schmitz, and Qing Chen</i>	
3.1	Overview and Definitions	269
3.1.1	What is a Microstructure and why it is Important?	269
3.2	How to Describe and Store a Microstructure?	271
3.2.1	Digital Microstructures	273
3.3	Phenomena Affecting Microstructure Evolution	273
3.4	Basic Equations/Models	275

3.5	Models for Microstructure Evolution	276
3.5.1	Overview	276
3.5.2	Example for Integral Models	276
3.5.3	Nucleation Models	279
3.5.3.1	Classical Approach to Nucleation	279
3.5.3.2	Free Growth-Limited Model	280
3.5.3.3	Molecular Dynamics (MD) Simulations	281
3.5.3.4	Phase-Field Theory and Simulations	282
3.5.3.5	Density Functional Theory and Phase-Field Crystal Modeling	283
3.5.3.6	Incorporating Nucleation into Simulations	284
3.5.4	Diffusion Models	286
3.5.4.1	Single-Phase Diffusion Problems	286
3.5.4.2	Moving Phase Boundary Simulations under Local Equilibrium Conditions	287
3.5.4.3	1D Multiphase Simulations	289
3.5.5	Precipitation Models	289
3.5.6	Cellular Automaton Models	292
3.5.7	Monte Carlo Potts Models	295
3.5.8	Phase-Field and Multiphase-Field Models	296
3.5.9	Phase-Field Crystal Models	300
3.5.10	Crystal Plasticity	304
3.5.10.1	Fundamentals	304
3.5.10.2	Texture Simulation	306
3.5.10.3	Constitutive Modeling (CP-FEM/CP-FFT)	307
3.6	Software Tools	308
