

Table of contents

Preface	8
What is INNOVATE and why does it propose recommendations?	10
The starting points of the research: regional introduction	15
INNOVATE recommendations	28

1	WATER—management at the LOCAL scale	28
1.1	Nutrient load management	29
1.2	Residence times of water and dissolved contamination	31
1.3	Impacts of potential flash floods from ephemeral and intermittent tributaries	32
1.4	Limit the nutrient emissions from net-cage aquaculture	33
1.5	Managing the diverse ecological impacts of aquaculture	34
1.6	Realizing environmental monitoring in fisheries	35
1.7	Preserving aquatic biodiversity	36
1.8	Reinforcing water resources management	38
1.9	The Green Liver System (GLS)—an approach to purify water	39
1.10	The aquaponics approach	43
1.11	Delimitation of conflict areas for land use planning around the Itaparica Reservoir	45

2	LAND—management at the LOCAL scale	47
2.1	Strengthening the organization of public irrigation schemes	48
2.2	Measures to improve the economy of irrigated cropping	50
2.3	Soil amendments can enhance the nutrient retention capacity of sandy soils	51
2.4	Technologies for an environmentally and economically sound irrigated agriculture	53
2.5	<i>Zé da Jia</i> —A comic leaflet explaining biological pest control	56
2.6	Good governance in implementing biological pest control	57
2.7	What favors and hinders the adoption of <i>umbuzeiro</i> tree planting as a new technology?	59
2.8	Livestock husbandry: better use of local resources matters	61
2.9	Fodder conservation techniques (leaflets)	63
2.10	Managing Caatinga sustainably: good for livestock, farmers, and the environment	64
2.11	Effective nature conservation is needed to protect the Caatinga biome	65
2.12	Leaflet Caatinga: knowing, liking, conserving	67

3	WATER and LAND interactions—management at the LOCAL scale	68
3.1	Sediment retention dikes promote local storage of water	69
3.2	Land and water governance are suffering from a lack of cooperation between the local sectors	70
3.3	Cartographic material of Petrolândia	73
3.4	Practicing and mainstreaming environmental education	74

4	WATER (and Land)—management at the BASIN scale	75
4.1	Adjust the closed fishing season	76
4.2	Towards an interlinked electricity mixture: complement hydropower by other renewables	77
4.3	Prepare for (temporarily) limited water supply	79
4.4	Safeguarding nature and people: implement an environmental flow in reservoir management	80
4.5	Consolidate the registry of water rights (“outorgas”)	82
4.6	Rethinking the controversial water diversion project (“transposição”)	83
4.7	Minimize the emissions of greenhouse gases (GHG)	85
4.8	The economic value of water: a concept to economize scarce water resources	86
4.9	Integrated hydro-economic models can explain the economic consequences of water allocation	88
4.10	Multi-level governance: an integrative and strategic approach is necessary	89

5	LAND—related to management at the BASIN scale	92
5.1	The Caatinga biome as a whole needs more attention and protection	93
5.2	Managing nutrient emissions from urban systems and agriculture	95
5.3	Reducing the risks of P losses from soils	97

6	OVERALL—related to management at the LOCAL and BASIN scales	100
6.1	Improving climate databases for better planning of the adaptation measures	101
6.2	INNOVATE’s metadatabase: which data was collected and used, where is it available?	102
6.3	Clarification of complex situations: Constellation Analysis explained in WOCAT style	103
6.4	Probabilities of adopting an innovation: Bayesian Networks explained in WOCAT style	104
6.5	Encourage, strengthen, and monitor public participation	105
6.6	Good governance: guidelines to reflect and adjust who steers what and how	107
6.7	A follow-up concept is an integral part of good governance	109
6.8	The implementation of sustainable innovations affects the whole arena of actors and their relationships	110

	List of supplementary materials	114
	Contributing authors, and institutions involved in the INNOVATE project	120
	List of tables and figures	124
	List of abbreviations	125
