<i>Preface</i>	v
<i>Acknowledgments</i>	vii
1. Introduction	1
2. Kashiwara Crystals	7
2.1 Root systems . . . . .	7
2.2 Kashiwara crystals . . . . .	12
2.3 Tensor products of crystals . . . . .	18
2.4 The signature rule . . . . .	22
2.5 Root strings . . . . .	23
2.6 The character . . . . .	24
2.7 Related crystals and twisting . . . . .	25
2.8 Dynkin diagrams and Levi branching . . . . .	26
Exercises . . . . .	28
3. Crystals of Tableaux	31
3.1 Type $A$ crystals of tableaux . . . . .	31
3.2 An example . . . . .	35
Exercises . . . . .	36
4. Stembridge Crystals	38
4.1 Motivation and examples . . . . .	38
4.2 Stembridge axioms . . . . .	42
4.3 Stembridge crystals as a monoidal category . . . . .	45
4.4 Properties of Stembridge crystals . . . . .	51
Exercises . . . . .	54

5.	Virtual, Fundamental, and Normal Crystals	55
5.1	Embeddings of root systems	55
5.2	Virtual crystals	57
5.3	Properties of virtual crystals	61
5.4	Fundamental crystals	63
5.5	Adjoint crystals	66
5.6	Fundamental crystals: The exceptional cases	68
5.7	Normal crystals	71
5.8	Reducible Cartan types	74
5.9	Similarity of crystals	75
5.10	Levi branching of normal crystals	76
	Exercises	78
6.	Crystals of Tableaux II	80
6.1	Column reading in type $A$	82
6.2	Crystals of columns	83
6.3	Crystals of tableaux	88
6.3.1	Crystal of tableaux: Type $C_r$	88
6.3.2	Crystal of tableaux: Type $B_r$	91
6.3.3	Crystal of tableaux: Type $D_r$	93
	Exercises	95
7.	Insertion Algorithms	96
7.1	The RSK algorithm	96
7.2	The dual RSK algorithm	105
7.3	Edelman–Greene insertion	107
	Exercises	110
8.	The Plactic Monoid	112
8.1	The definition of the plactic monoid	112
8.2	The plactic monoid and Knuth equivalence	113
8.3	Crystals and Schensted insertion	116
8.4	Crystals of skew tableaux	120
	Exercises	123
9.	Bicrystals and the Littlewood–Richardson Rule	125
9.1	The $GL(n) \times GL(r)$ bicrystal	127
9.2	The crystal see-saw and the Littlewood–Richardson rule	130
	Exercise	132

10. Crystals for Stanley Symmetric Functions	133
10.1 Stanley symmetric functions . . . . .	133
10.2 Crystal on decreasing factorizations . . . . .	135
10.3 Applications . . . . .	137
Exercises . . . . .	142
11. Patterns and the Weyl Group Action	143
11.1 String patterns . . . . .	144
11.2 Gelfand–Tsetlin patterns . . . . .	149
11.3 The Weyl group action . . . . .	151
Exercises . . . . .	156
12. The $\mathcal{B}_\infty$ Crystal	157
12.1 Elementary crystals . . . . .	158
12.2 The crystal $\mathcal{B}_\infty$ for simply-laced types . . . . .	159
12.3 The crystal $\mathcal{B}_\infty$ for non-simply-laced types . . . . .	164
12.4 Demazure crystals in $\mathcal{B}_\infty$ . . . . .	167
Exercises . . . . .	170
13. Demazure Crystals	172
13.1 Demazure operators and the Demazure character formula . . . . .	172
13.2 Demazure crystals . . . . .	174
13.3 Crystal Demazure operators . . . . .	174
Exercises . . . . .	176
14. The $\star$ -Involution of $\mathcal{B}_\infty$	178
14.1 The $A_2$ case . . . . .	179
14.2 The general case . . . . .	180
14.3 Properties of the involution . . . . .	190
14.3.1 Relation to Demazure crystals . . . . .	190
14.3.2 Characterization of highest weight crystals . . . . .	191
14.3.3 Commutor . . . . .	192
Exercises . . . . .	193
15. Crystals and Tropical Geometry	195
15.1 Lusztig parametrization: The $A_2$ case . . . . .	197
15.2 Geometric preparations . . . . .	199
15.3 The Lusztig parametrization in the simply-laced case . . . . .	201
15.4 Weyl group action . . . . .	205
15.5 The geometric weight map . . . . .	207
15.6 MV polytopes: The $A_2$ case . . . . .	212
15.7 Tropical Plücker relations . . . . .	213

15.8	The crystal structure on MV polytopes . . . . .	217
15.9	The $\star$ -involution . . . . .	221
15.10	MV polytopes and the finite crystals $\mathcal{B}_\lambda$ . . . . .	223
	Exercises . . . . .	224
16.	Further Topics . . . . .	228
16.1	Kirillov–Reshetikhin crystals . . . . .	228
16.2	Littelmann path and alcove path models . . . . .	230
16.3	Kyoto path model . . . . .	231
16.4	Nakajima monomial model . . . . .	232
16.5	Crystals on rigged configurations . . . . .	233
16.6	Modular branching rules of the symmetric group and crystal bases . . . . .	234
16.7	Tokuyama’s formula . . . . .	234
16.8	Crystals of Lie superalgebras . . . . .	236
Appendix A	Schur–Weyl Duality . . . . .	239
A.1	Generalities . . . . .	239
A.2	The Schur–Weyl duality correspondence . . . . .	246
A.3	Symmetric functions . . . . .	248
A.4	See-saws . . . . .	250
Appendix B	The Cauchy Correspondence . . . . .	252
B.1	The Cauchy identity . . . . .	252
B.2	Three interpretations of Littlewood–Richardson coefficients . . . . .	254
B.3	Pieri’s formula . . . . .	256
B.4	Symmetric group branching rules . . . . .	258
B.5	The involution on symmetric functions . . . . .	260
B.6	The $\mathrm{GL}(n, \mathbb{C})$ branching rule . . . . .	260
B.7	The dual Cauchy identity . . . . .	262
	<i>Bibliography</i> . . . . .	263
	<i>Index</i> . . . . .	275
