

# Contents

Introduction	1
Chapter 1. The Ring of Symmetric Functions	7
1.1. Ordinary Functions	7
1.2. Schur Functions	9
1.3. The Knuth Correspondence	15
1.4. Some Applications to Symmetric Functions	18
1.5. The Littlewood-Richardson Rule	24
1.6. The Characters of the Symmetric Group	34
1.7. Kostka-Foulkes Polynomials	46
1.8. How the Symmetric Group Acts on Tableaux	52
Chapter 2. Schubert Polynomials	57
2.1. Permutations and the Bruhat Order	57
2.2. Some Classes of Permutations	64
2.3. Schubert Polynomials	69
2.4. Some Properties of Schubert Polynomials	75
2.5. Simple Schubert Polynomials	78
2.6. Flagged Schur Functions	85
2.7. Multiplication of Schur Polynomials	92
2.8. Enumeration of Reduced Words	97
Chapter 3. Schubert Varieties	101
3.1. Grassmannians	101
3.2. Schubert Varieties of Grassmannians	104
3.3. Standard Monomials	111
3.4. Singularities of Schubert Varieties	115
3.5. Characteristic Classes and Degeneracy Loci	121
3.6. Flag Varieties	132
3.7. Singularities of Schubert Varieties, <i>reprise</i>	142
3.8. Degeneracy Loci and Schubert Polynomials	147
A Brief Introduction to Singular Homology	153
A.1. Singular Homology	153
A.2. Singular Cohomology	155
A.3. The Fundamental Class and Poincaré Duality	156
A.4. Intersection of Algebraic Subvarieties	158
Bibliography	161
Index	165
