1	Introduction	1
2	Mechanics	5
2.1	Introductory Remarks	5
2.2	Non-Newtonian Behavior	13
2.2.1	Shear-Thinning and Shear-Thickening	13
2.2.2	Thixotropy	14
2.2.3	Stress Relaxation	15
2.2.4	Creep	16
2.2.5	Normal Stress Differences	16
2.2.6	Yield	18
2.3	Preliminaries	19
2.3.1	Kinematics	19
2.3.2	Frames, Frame-Indifference and Restrictions Due to Frame-Indifference.	24
2.3.3	Balance Laws	27
2.4	Constitutive Relations for Fluids of the Differential Type	28
2.4.1	Special Motions	38
2.4.2	Secondary Flows in Pipes	39
2.4.3	Stability to Finite Disturbances	41
2.4.4	Instability	44
2.5	Boundary Conditions for Fluids of the Differential Type	47
2.6	Creeping Flows of Fluids of the Differential Type	54
2.6.1	Creeping Flows of Fluids of Grade Two	55
2.7	Boundary Layer Theories for Fluids of the Differential Type	59
2.7.1	Boundary Layers in the Limit of Zero Reynolds Number	60
2.7.2	Development of Boundary Layers in Flows of Fluids of Grade Two	61

2.7.3	Inertial Boundary Layers.	63
2.7.4	Flows of Fluids of Grade Two with a Free Surface	64
2.7.5	Universal Flows.	66
2.8	Rate Type Fluids	67
2.8.1	A Gibbs-Potential-Based Formulation for Obtaining Rate Type Response Functions for Viscoelastic Fluids.	83
2.9	Bingham Fluids	83
2.10	Appendix	85
2.10.1	Integral Type Constitutive Equations	85
2.10.2	Fractional Derivative Models of the Rate and Integral Type	87
2.10.3	Free-Surface Flows	90
3	Mathematical Preliminaries	93
3.1	Notation and Spaces.	93
3.1.1	Sobolev and Hölder Spaces.	93
3.1.2	Some Interpolation Inequalities	99
3.2	Some Theoretical Results	101
3.2.1	The Laplace Equation.	101
3.2.2	The Stokes System.	104
3.3	Further Tools of Functional Analysis	109
3.3.1	Subdifferential	109
3.3.2	Some Tools for Nonlinear and Time-Dependent Problems	113
4	Classical Non-Newtonian Fluids	115
4.1	Introduction	115
4.2	Subdifferential Type Constitutive Equation	116
4.2.1	Formulation and Examples	116
4.2.2	Functional Setting	121
4.2.3	Existence Theorems	126
4.2.4	Biregularization and Galerkin Solutions	131
4.2.5	First Passing to the Limit	134
4.2.6	Second Passing to the Limit	137
4.2.7	Uniqueness	146
4.2.8	Examples and Applications.	150
4.2.9	What About the Pressure?.	153
4.3	Model Example: The Bingham Fluid	158
4.3.1	Definition of a Bingham Fluid.	158
4.3.2	Stress Threshold	161
4.4	Fluids with Nonlinear Viscosity Bounded at Infinity	167
4.4.1	Variational Formulation. Examples.	167
4.4.2	Formulation and Properties of the Main Operator.	168
4.4.3	Existence and Uniqueness Results	174

5	Grade-Two Fluids: Some Theoretical Results	179
5.1	Introduction and Preliminaries	179
5.1.1	Formulation	179
5.2	Flow of a Grade-Two Fluid with No-Slip Boundary Condition. The Simply-Connected Case	182
5.2.1	Constructing Solutions: The Main Ideas	183
5.2.2	A First Variational Formulation	185
5.2.3	A Galerkin Solution	190
5.2.4	A Priori Estimates	193
5.2.5	Passing to the Limit	196
5.2.6	Uniqueness	198
5.2.7	Global Existence in Time	201
5.3	Flow of a Grade-Two Fluid with No-Slip Boundary Condition. The Case of a Multiply-Connected Domain	203
5.4	Flow of a Grade-Two Fluid with Tangential Boundary Condition Prescribed. The Case of a Convex Corner Domain	208
5.4.1	A Lifting; Reduction to Homogeneous Boundary Conditions	209
5.4.2	Formal A Priori Estimates	211
5.4.3	Galerkin Solution and A Priori Estimates	213
5.4.4	Passing to the Limit and Recovering the Pressure	215
5.4.5	Uniqueness	216
5.4.6	Global Existence in Time	218
5.5	Flow of a Grade-Two Fluid with Tangential Boundary Condition Prescribed. The Case of a Smoother Domain	220
5.5.1	A Leray–Hopf Lifting and Its Consequences	221
5.5.2	Formal A Priori Estimates	226
5.5.3	Local in Time Existence	228
5.5.4	Global Existence in Time	229
5.6	Splitting: The Steady System in $2-D$	230
5.6.1	Split Formulation	231
5.6.2	A Simpler Leray–Hopf Lifting	234
5.6.3	Formal A Priori Estimates	236
5.6.4	Construction of a Solution	239
5.6.5	Uniqueness of the Steady $2-D$ Problem	243
5.6.6	Limit as α Tends to Zero	247
5.7	Splitting: The Time-Dependent System in $2-D$	249
5.7.1	Formal A Priori Estimates	252
5.7.2	Existence of Solutions by Semi-discretization in Time	258
5.7.3	Uniqueness	270
5.8	Splitting: The Steady System in $3-D$	273
5.8.1	Equivalence	274
5.8.2	Two Auxiliary Systems	278

5.8.3	A Fixed-Point Argument	282
5.8.4	The Splitting of J.M. Bernard	285
5.9	Splitting: The Time-Dependent Problem in 3-D	288
5.9.1	Splitting: Equivalence	289
5.9.2	Splitting: A Semi-discrete Scheme	291
5.9.3	Splitting: A Priori Estimates	292
5.9.4	Splitting: Passing to the Limit	305
5.10	Grade-Two Fluids: Some Open Problems	308
5.10.1	Other Boundary Conditions	308
5.10.2	Analysis of Numerical Schemes	309
5.10.3	Rough Force	310
5.10.4	Limit as α Tends to Zero	310
6	Short Survey on the Theory of Grade-Three Fluids	311
6.1	Introduction	311
6.1.1	Formulations	311
6.1.2	Strategies	314
6.2	Variational Formulation. The Time-Dependent Problem	316
6.3	A Priori Estimates	319
6.4	Construction of Solutions by Galerkin's Method	322
6.4.1	Existence	322
6.4.2	Uniqueness	325
6.5	The Steady-State Problem	327
6.5.1	A Remarkable Monotonicity	327
6.5.2	Existence of a Solution	329
6.5.3	Uniqueness	337
7	Appendix	339
7.1	Korn's Inequality in L^r	339
7.2	The Steady Transport Equation	341
7.2.1	Some L^2 Results on the Scalar Transport Equation for Steady Flow	341
7.2.2	Extension to a Steady Transport System in L^p	350
7.3	The Time-Dependent Transport Equation	356
7.3.1	A Scalar Equation: Existence of Solutions	356
7.3.2	A Scalar Equation: Uniqueness	359
7.3.3	The Case of a System with a Lipschitz Velocity	365
7.3.4	Extension to a System in L^p	370
7.4	A Family of Riccati Integro-Differential Inequalities	372
	List of Notations	375
	References	379
