Grid Homology for Knots and Links

**Peter S. Ozsváth
András I. Stipsicz
Zoltán Szabó**

**American Mathematical Society
Providence, Rhode Island**

Contents

| | |
|---|----|
| Chapter 1. Introduction | 1 |
| 1.1. Grid homology and the Alexander polynomial | 1 |
| 1.2. Applications of grid homology | 3 |
| 1.3. Knot Floer homology | 5 |
| 1.4. Comparison with Khovanov homology | 7 |
| 1.5. On notational conventions | 7 |
| 1.6. Necessary background | 9 |
| 1.7. The organization of this book | 9 |
| 1.8. Acknowledgements | 11 |
| Chapter 2. Knots and links in S^3 | 13 |
| 2.1. Knots and links | 13 |
| 2.2. Seifert surfaces | 20 |
| 2.3. Signature and the unknotting number | 21 |
| 2.4. The Alexander polynomial | 25 |
| 2.5. Further constructions of knots and links | 30 |
| 2.6. The slice genus | 32 |
| 2.7. The Goeritz matrix and the signature | 37 |
| Chapter 3. Grid diagrams | 43 |
| 3.1. Planar grid diagrams | 43 |
| 3.2. Toroidal grid diagrams | 49 |
| 3.3. Grids and the Alexander polynomial | 51 |
| 3.4. Grid diagrams and Seifert surfaces | 56 |
| 3.5. Grid diagrams and the fundamental group | 63 |
| Chapter 4. Grid homology | 65 |
| 4.1. Grid states | 65 |
| 4.2. Rectangles connecting grid states | 66 |
| 4.3. The bigrading on grid states | 68 |
| 4.4. The simplest version of grid homology | 72 |
| 4.5. Background on chain complexes | 73 |
| 4.6. The grid chain complex GC^- | 75 |
| 4.7. The Alexander grading as a winding number | 82 |
| 4.8. Computations | 86 |
| 4.9. Further remarks | 90 |
| Chapter 5. The invariance of grid homology | 91 |
| 5.1. Commutation invariance | 91 |
| 5.2. Stabilization invariance | 99 |

| | |
|--|---------|
| 5.3. Completion of the invariance proof for grid homology | 107 |
| 5.4. The destabilization maps, revisited | 108 |
| 5.5. Other variants of the grid complex | 110 |
| 5.6. On the holomorphic theory | 110 |
| 5.7. Further remarks on stabilization maps | 110 |
| Chapter 6. The unknotting number and τ | 113 |
| 6.1. The definition of τ and its unknotting estimate | 113 |
| 6.2. Construction of the crossing change maps | 115 |
| 6.3. The Milnor conjecture for torus knots | 120 |
| 6.4. Canonical grid cycles and estimates on τ | 122 |
| Chapter 7. Basic properties of grid homology | 127 |
| 7.1. Symmetries of the simply blocked grid homology | 127 |
| 7.2. Genus bounds | 129 |
| 7.3. General properties of unblocked grid homology | 130 |
| 7.4. Symmetries of the unblocked theory | 132 |
| Chapter 8. The slice genus and τ | 135 |
| 8.1. Slice genus bounds from τ and their consequences | 135 |
| 8.2. A version of grid homology for links | 136 |
| 8.3. Grid homology and saddle moves | 139 |
| 8.4. Adding unknots to a link | 143 |
| 8.5. Assembling the pieces: τ bounds the slice genus | 146 |
| 8.6. The existence of an exotic structure on \mathbb{R}^4 | 147 |
| 8.7. Slice bounds vs. unknotting bounds | 149 |
| Chapter 9. The oriented skein exact sequence | 151 |
| 9.1. The skein exact sequence | 151 |
| 9.2. The skein relation on the chain level | 153 |
| 9.3. Proofs of the skein exact sequences | 160 |
| 9.4. First computations using the skein sequence | 162 |
| 9.5. Knots with identical grid homologies | 163 |
| 9.6. The skein exact sequence and the crossing change map | 164 |
| 9.7. Further remarks | 166 |
| Chapter 10. Grid homologies of alternating knots | 167 |
| 10.1. Properties of the determinant of a link | 167 |
| 10.2. The unoriented skein exact sequence | 176 |
| 10.3. Grid homology groups for alternating knots | 183 |
| 10.4. Further remarks | 185 |
| Chapter 11. Grid homology for links | 187 |
| 11.1. The definition of grid homology for links | 188 |
| 11.2. The Alexander multi-grading on grid homology | 192 |
| 11.3. First examples | 194 |
| 11.4. Symmetries of grid homology for links | 196 |
| 11.5. The multi-variable Alexander polynomial | 199 |
| 11.6. The Euler characteristic of multi-graded grid homology | 203 |
| 11.7. Seifert genus bounds from grid homology for links | 204 |

| | |
|--|------------|
| 11.8. Further examples | 205 |
| 11.9. Link polytopes and the Thurston norm | 210 |
| Chapter 12. Invariants of Legendrian and transverse knots | 215 |
| 12.1. Legendrian knots in \mathbb{R}^3 | 216 |
| 12.2. Grid diagrams for Legendrian knots | 220 |
| 12.3. Legendrian grid invariants | 223 |
| 12.4. Applications of the Legendrian invariants | 228 |
| 12.5. Transverse knots in \mathbb{R}^3 | 231 |
| 12.6. Applications of the transverse invariant | 236 |
| 12.7. Invariants of Legendrian and transverse links | 240 |
| 12.8. Transverse knots, grid diagrams, and braids | 244 |
| 12.9. Further remarks | 245 |
| Chapter 13. The filtered grid complex | 247 |
| 13.1. Some algebraic background | 247 |
| 13.2. Defining the invariant | 252 |
| 13.3. Topological invariance of the filtered quasi-isomorphism type | 254 |
| 13.4. Filtered homotopy equivalences | 268 |
| Chapter 14. More on the filtered chain complex | 273 |
| 14.1. Information in the filtered grid complex | 273 |
| 14.2. Examples of filtered grid complexes | 278 |
| 14.3. Refining the Legendrian and transverse invariants: definitions | 281 |
| 14.4. Applications of the refined Legendrian and transverse invariants | 285 |
| 14.5. Filtrations in the case of links | 287 |
| 14.6. Remarks on three-manifold invariants | 289 |
| Chapter 15. Grid homology over the integers | 291 |
| 15.1. Signs assignments and grid homology over \mathbb{Z} | 291 |
| 15.2. Existence and uniqueness of sign assignments | 295 |
| 15.3. The invariance of grid homology over \mathbb{Z} | 302 |
| 15.4. Invariance in the filtered theory | 308 |
| 15.5. Other grid homology constructions over \mathbb{Z} | 319 |
| 15.6. On the τ -invariant | 321 |
| 15.7. Relations in the spin group | 321 |
| 15.8. Further remarks | 323 |
| Chapter 16. The holomorphic theory | 325 |
| 16.1. Heegaard diagrams | 325 |
| 16.2. From Heegaard diagrams to holomorphic curves | 327 |
| 16.3. Multiple basepoints | 333 |
| 16.4. Equivalence of knot Floer homology with grid homology | 335 |
| 16.5. Further remarks | 338 |
| Chapter 17. Open problems | 339 |
| 17.1. Open problems in grid homology | 339 |
| 17.2. Open problems in knot Floer homology | 341 |
| Appendix A. Homological algebra | 347 |
| A.1. Chain complexes and their homology | 347 |

| | |
|---|-----|
| A.2. Exact sequences | 350 |
| A.3. Mapping cones | 352 |
| A.4. On the structure of homology | 357 |
| A.5. Dual complexes | 359 |
| A.6. On filtered complexes | 362 |
| A.7. Small models for filtered grid complexes | 363 |
| A.8. Filtered quasi-isomorphism versus filtered homotopy type | 365 |
| Appendix B. Basic theorems in knot theory | 367 |
| B.1. The Reidemeister Theorem | 367 |
| B.2. Reidemeister moves in contact knot theory | 373 |
| B.3. The Reidemeister-Singer Theorem | 382 |
| B.4. Cromwell's Theorem | 387 |
| B.5. Normal forms of cobordisms between knots | 394 |
| Bibliography | 399 |
| Index | 407 |
