Contents

Preface		**xv**
Acknowledgments		**xxiii**
Foreword		**xxvii**
Part I	**Introduction to Software Factories**	**1**
Chapter 1	**Introduction**	**3**
	Tools Lag Platforms	4
	The Software Development Landscape	7
	Platform Technology Evolution	8
	Building Applications with Services	24
	Software Development Challenges	30
	Discontinuous Innovation	32
	Notes	34
Chapter 2	**Dealing with Complexity**	**35**
	The Problem of Complexity	35
	Feature Delocalization	38
	Working at the Wrong Level of Abstraction	41
	Raising the Level of Abstraction	53
	Packaging Abstractions	61
	Current Methods and Practices	66
	Encapsulation	67
	Partitioning Responsibility	68
	Documenting Design	73
	Automating Development	77
	Organizing Development	82
	Notes	85

Chapter 3 Dealing with Change 87
The Problem of Change 87
Responses to Change 87
Software Aging 88
Software As Simulation 90
Sources of Change 99
Current Methods and Practices 100
Preventing Stagnation 101
Reducing Brittleness 104
Reducing Fatigue 106

Chapter 4 Paradigm Shift 109
Chronic Problems 109
Monolithic Construction 110
Gratuitous Generality 115
One-Off Development 120
Process Immaturity 121
Critical Innovations 125
Systematic Reuse 125
Development by Assembly 129
Model-Driven Development 139
Process Frameworks 150

Chapter 5 Software Factories 155
Industrializing Software Development 155
The Economics of Reuse 156
Economies of Scale and Scope 157
Systematic Software Reuse 159
Integrating the Critical Innovations 161
What Is a Software Factory? 163
What Is a Software Factory Schema? 164
What Is a Software Factory Template? 173
Building a Software Factory 174
Building a Software Product 175
A Software Factory Example 180
Implications of Software Factories 185
Development by Assembly 185
Software Supply Chains 186
Relationship Management 187
Domain Specific Assets 187
Organizational Changes 188
Mass Customization of Software 188
Realizing the Software Factory Vision 189
Notes 190

Part II Critical Innovations 191

Chapter 6 Models and Patterns 193
Intent versus Implementation 193
What Is Intent? 194
Capturing Intent 195
A Closer Look at Patterns 197
Creating and Using Patterns 198
Weaving Patterns into Languages 201
Patterns in Product Families 204
Encapsulating Pattern Languages 205
What Is Encapsulation? 206
Defining Languages with Encapsulation 208
Formalizing Pattern Languages 210
What Are Models? 212
Models as Abstractions 213
Model Visualization 214
Models as Metadata 217
Models as Development Artifacts 218
Modeling or Programming? 226

Chapter 7 Programming with Models 231
Model-Driven Development 231
Generating Software 233
Automating Patterns 238
Automating Refactoring 249
Automating Builds 249
Automating Deployment 249
Automating Testing 251
Debugging with Models 252
Using Multiple Views 253
Architectural Description 253
Domain Specificity 254
Modeling Aspects 258
How to Model Software 263
Types of Information 264
Level of Abstraction 266
Style of Specification 271
Domain-Specific Languages 274
Business Ramifications 274
Technical Ramifications 275
Next Steps 277
Notes 277

Chapter 8 Language Anatomy 279
Example Language 282

	Abstract Syntax	285
	Context-Free Grammars and BNF	286
	Metamodels	289
	Abstract Syntax Graphs	293
	Well-Formedness Rules	294
	Comparison of CFGs and Metamodels	297
	Concrete Syntax	299
	Serialization Syntax	306
	Semantics	309
	Translational Semantics	310
	Trace-Based Semantics	312
	Programming versus Modeling	318
	Notes	319
Chapter 9	**Families of Languages**	**321**
	Language Families	321
	Tool Factories	328
	Tool Factory Architecture	328
	The State of the Art	333
Chapter 10	**Systematic Reuse**	**337**
	Software Product Families	337
	Software as a Product	338
	How Families Are Formed	338
	Working Within a Family	340
	Solving Problems in Advance	341
	The Role of Architecture	342
	Commonality and Variability	344
	Where Families Are Found	345
	Software Product Lines	347
	Creating Economies of Scope	348
	Required Adaptations	350
	Software Supply Chains	355
	Notes	358
Chapter 11	**Software Product Lines**	**359**
	Product Line Development	359
	Product Line Analysis	361
	Product Line Design	375
	Product Line Implementation	379
	Product Development	382
	Problem Analysis	382
	Product Specification	382
	Collateral Development	385
	Product Implementation	385
	Product Line Evolution	391
	Product Line Deployment	391

Chapter 12 Platform-Based Abstractions **393**
Platform-Based Abstractions 393
Platform-Based Abstractions in Product Lines 395
Properties of Platform-Based Abstractions 397
Classes, Libraries, and Frameworks 401
Class Frameworks 403
Summary 411

Chapter 13 Components and Services **413**
Software Components 413
Definition 413
Interface Specifications 415
Component Dependencies 423
Component-Based Development 426
Defining Product Line Component Architectures 432
From Components to Services 438
Service Components 438
Business Protocols and Contracts 439
Service-Oriented Architectures 445
Web Services Technology 446
What's Different This Time? 448
Web Service Data Semantics 448
WS Process Semantics 450
Summary 452
Notes 453

Chapter 14 Mappings and Transformations **455**
Transformations 455
Types of Transformation 456
Vertical Transformations 458
Horizontal Transformations 462
Transformation Problems 470
Model-to-Model Transformations 471
Model-to-Code Transformations 473
Solving the Composition Problem 476
Solving the Traceability Problem 479
Summary 481
Notes 481

Chapter 15 Generating Implementations **483**
Describing Transformations 483
Mapping Rules Have IF-THEN Parts 485
Implementing Mapping Rules 489
Specifying Horizontal Transformations 493
Describing Aspect Weaving 493
Describing Refactoring Rules 495
Patterns as Sets of Mapping Rules 496

	Transformation Systems	500
	Black-Box and White-Box Transformations	501
	Grey-Box Transformation Systems	503
	Applying Black-Box Transformations	505
	Summary	508
Part III	**Software Factories in Depth**	**509**
Chapter 16	**A Software Factory Example**	**511**
	A Review of the Approach	511
	Building an Online eCommerce Application Family	512
	Product Line Analysis	515
	Product Line Definition	515
	Problem Domain Scoping	518
	Solution Domain Scoping	521
	Business Case Analysis	524
	Product Line Design	526
	Product Line Architecture Development	526
	Product Line Requirements Mapping	546
	Product Line Implementation	548
	Asset Provisioning	548
	Asset Packaging	557
	Product Development	557
	Product Specification	558
	Conclusion	560
	Notes	561
Chapter 17	**Frequently Asked Questions**	**563**
	How Do Software Factories Differ From . . . ?	563
	How Do Software Factories Differ from RAD?	564
	How Do Software Factories Differ from MDA®?	567
	How Do Software Factories Differ from the UP?	573
	How Do Software Factories Differ from Agile Modeling?	577
	How Agile Are Software Factories?	580
	Agile Development Principles	580
	Agile Development Practices	582
	How Will Software Factories Be Adopted?	584
	Types of Business Applications	586
	Business Application Characteristics	586
	How Mature Are Software Factories?	588
	Language Technology	589
	Tool Extensibility	589
	Pattern Composition	590

Deferred Encapsulation 590
Standard Assets for Popular Domains 591
How Should Software Factories Be Implemented? 591
New Development Artifacts 592
New Development Scope 592
New Development Activities 592
Implementing Software Factories 593
What's Different This Time? 594

Appendix A: Abstraction and Refinement 597

Appendix B: The Unified Modeling Language 611
