CONTENTS

Introduction 1
0.1. General overview and background 1
0.2. Main definition 3
0.3. Examples 4
0.4. Discussion of the results 7
0.5. Organization of the text 16
Acknowledgments 19
Conventions and notations 19

1. Feynman categories 21
1.1. Feynman categories—the definition 21
1.2. (Re)-Construction 22
1.3. Surjections: A simple, but not too simple, example $\mathfrak{F}_{\mathrm{surj}}$ 23
1.4. Induced structures 24
1.5. Functors as a generalization of operads and $\mathbb{S}$-modules: $\mathcal{O}ps$ and $\mathcal{M}ods$ 26
1.6. Morphisms of Feynman categories 29
1.7. Other relevant notions 31
1.8. Weaker, alternative and Cartesian enriched notions of Feynman categories 32
1.9. Weak Feynman categories and indexed enriched Feynman categories 36
1.10. Connection to Feynman graphs and physics 38
1.11. Discussion and relation to other structures 38

2. Examples 41
2.1. The Feynman category $\mathfrak{G} = (\mathcal{C}rl, \mathcal{A}gg, \imath)$ and categories indexed over it 42
2.2. Feynman categories indexed over $\mathfrak{G}^{\mathrm{dir}}$ 45
2.3. Feynman categories indexed over $\mathfrak{G}$ 49
2.4. More functors 51
2.5. Colored versions 51
2.6. Planar versions 51
2.7. Not so classical examples 53
2.8. $\mathcal{O}ps$ with special elements: units and multiplication 55
2.9. Truncation, stability, and the role of $0, 1, 2$ flag corollas 56

2.10. Feynman categories with trivial $\mathcal{V}$ 58
2.11. Remarks on relations to similar notions 59

3. General constructions 61
3.1. Free monoidal construction $\mathcal{F}^{\boxtimes}$ 61
3.2. NC-construction 61
3.3. $\mathcal{F}_{\mathrm{dec}\mathcal{O}}$: Decorated Feynman categories 63
3.4. Iterating Feynman categories 66
3.5. Arrow category 68
3.6. Feynman level category $\mathfrak{F}^{+}$ 68
3.7. Feynman hyper category $\mathfrak{F}^{\mathrm{hyp}}$ 70

4. Indexed Enriched Feynman categories, (odd) twists and Hopf algebras 73
4.1. Enrichment functors 73
4.2. Indexed Feynman $\mathcal{H}b$-Categories: Orientations and Odd $\mathcal{O}ps$ 77
4.3. Examples 78
4.4. A Connes-Kreimer style bi-algebra/Hopf algebra structure 79

5. Feynman categories given by generators and relations 83
5.1. Structure of $\mathfrak{G}$ 83
5.2. Odd versions for Feynman categories with ordered presentations 86

6. Universal Operations 91
6.1. Cocompletion and the universal Feynman category 91
6.2. Enriched Versions 93
6.3. Cocompletion for $\mathcal{O}ps$ 94
6.4. Generators and weak generators 94
6.5. Feynman categories indexed over $\mathfrak{G}$ 94
6.6. Gerstenhaber's construction and its generalizations in terms of Feynman categories 95
6.7. Collecting results 97
6.8. Dual construction $\mathcal{F}^{\mathcal{V}}$ 97
6.9. Infinitesimal automorphism group, graph complex and $\mathfrak{grt}$ 98
6.10. Universal operations in iterated Feynman categories 99

7. Feynman transform, the (co)bar construction and Master Equations 101
7.1. Preliminaries 101
7.2. Graded Feynman categories 102
7.3. The differential 104
7.4. The (Co)bar construction and the Feynman transform 106
7.5. A general master equation 109

8. Homotopy theory of $\mathcal{F}$-$\mathcal{O}ps_{\mathcal{C}}$. 113
8.1. Preliminaries 113
8.2. The Model Structure 121

8.3. Quillen adjunctions from morphisms of Feynman categories 127
8.4. Cofibrant objects 128
8.5. Homotopy classes of maps and master equations 130
8.6. W Construction 133

A. Graph Glossary 139
A.1. The category of graphs 139
A.2. Extra structures 141
A.3. Flag killing and leaf operators; insertion operations 145

B. Topological Model Structure 147

Bibliography 155
