## Contents

### Part I  Mechanism and Machine Science in the Mechanical Engineer Curricula

**Historical Accounts on the Figure of Engineers and Academic Mission for their Formation** .................................................. 3  
Marco Ceccarelli and Roberto Bragastini

**Toward a Curriculum in Mechatronics: Two Experiences in Italy and Spain** .................................................. 11  
F. Bonsignore, L. Bruzzone and P. Fanghella

**Mechanical Engineering at a Distance: A Review** .................. 21  
M. Artés and J. López

**Basic Projects of Knowledge Integration in the Bachelors’ Degree in Industrial Technology** .................................................. 31  
S. Cardona Foix, L. Jordi Nebot, R. Pàmies-Vilà and P. Català Calderon

**Content and Realization of Education in Mechanism Theory at RWTH Aachen University** .................................................. 39  
S. Kurtenbach, T. Mannheim, M. Hüsing and B. Corves

**Integration Processes in Engineering Education** .................. 47  
V. V. Kuzlyakina

### Part II  Mechanism and Machine Science in the Engineer Program: Methodology

**Learning Through Competitive Environments: Use of Robotic Simulation Environments Combined with Economic Considerations** .................................................. 59  
J. L. Suñer Martínez and F. J. Rubio

---

New Trends in Educational Activity in the Field of ...

2014
Contents

Service-Learning Projects Based on Dynamic Documentation in Engineering Colleges ........................................ 69

Modern Means and Technologies of Training on Course Theory of Mechanisms and Machines ............................. 83
V. V. Kuzlyakina

An Example of Inquiry-Based Learning for Undergraduate Mechanical Vibrations. .......................................... 93

Application of Techniques Based on Reliability for the Improvement of the Teaching of Mechanisms in Industrial Design ................................................................. 101
Justo García Sanz-Calcedo, D. Rodríguez Salgado, I. Cambero and J. M. Herrera

Part III Mechanism and Machine Science in the Engineer Program: Applications and Research

Optomechatronics Applications of the Theory of Mechanisms with Active Student Involvement in Research .................. 111

Teaching Shaft Balancing as a Parameter Estimation Problem .... 121
J. Aginaga, X. Iriarte and J. Ros

Paradox in the Mechanism Science .................................................. 129
K. S. Ivanov and K. Jilisbaeva

Modern View on “History of Science” Teaching at Technical Universities ........................................................... 137
Olga Egorova, Alexander Evgrafov and Valeria Rayushkina

Research Lead Student Projects on Multi-Disciplinary Optomechatronics with Applications in Biomedical Imaging .... 145
V. -F. Duma, M. L. Negruțiu, C. Sinescu, I. Voiculescu, E. Miuteșcu, A. Burlea, M. Vlascici and Adrian Gh. Podoleanu

Analysis of Dynamic Systems Using Bond Graph and SIMULINK .... 155
José Antonio Calvo, Carolina Álvarez-Caldas and José Luis San Román
Teaching Machines Tools Operation in Virtual Laboratories of Engineering Faculties ................................. 163
M. J. Martín, F. Martín, C. Bermudo and L. Sevilla

Virtual Laboratory Works on Theory of Mechanism and Machine . . . 171
V. B. Tarabarin, Z. I. Tarabarina and A. G. Feygina

Interactive Application for Technical Drawing Learning .................. 181
C. Álvarez-Caldas, J. A. Calvo, A. Quesada and J. L. San Román

Part IV Mechanical Engineering Education: New Trends

Comparison of Geometry Software for the Analysis in Mechanism Theory ................................................. 193
S. Kurtenbach, I. Prause, C. Weigel and B. Corves

Kinematic Analysis of Planar Mechanisms by Means of Examples . . . 203
M. Urízar, O. Altuzarra, M. Diez, F. J. Campa and E. Macho

Teaching Mechanism and Machine Theory with GeoGebra ............... 211
X. Iriarte, J. Aginaga and J. Ros

Enhancing Mechanism and Machine Science Learning by Creating Virtual Labs with ADAMS .......................... 221
J. L. Suñer Martínez and J. Carballeira

Using the ThinkMOTION Project Resources for the Teaching of Mechanism and Machine Theory .......................... 229
V. Petuya, C. Pinto, J. Corral, E. Amezua and A. Hernández

Experience of Modernization of the Curriculum TMM in St. Petersburg State Polytechnical University ............... 239
Alexander Evgrafov, Andrey Khisamov and Olga Egorova

Part V Mechanical Engineering Education: Experiences

The Experience of the University of Oviedo in the Motostudent Competition .............................................. 251
A. Noriega, R. Fernández and J. L. Cortizo
Application of a Inter-University Competition on the Enhancement of Engineering Degrees
A. Fernández del Rincón, A. de Juan, P. García, M. Iglesias and F. Viadero

Making Videos to Engineer Students During the Norwegian Higher Education Reform
E. Villacorta

Mechanism Theory in Architecture Education
M. Barej, S. Hoffmann, G. Della Puppa, M. Hüsing, B. Corves and M. Trautz

Interdisciplinary Factory Planning in the Education of Mechanical Engineers and Architects
A. Kampker, M. Trautz, S. Kamp and I. Leufgens

Knowledge Pills for Teaching of Mechanism and Machine Theory
C. Casqueiro, R. Maceiras and A. Suárez

Evolution of the Supervised Work in Machine and Mechanism Theory at ETSEIB
S. Cardona Foix, L. Jordi Nebot, R. Pàmies-Vilà and P. Català Calderón
