<i>Preface</i>	v
<i>About the Author</i>	ix
<i>Acknowledgments</i>	xi
Chapter 1. Particle Dark Matter: The Name of the Game	1
1.1 Praeludium	1
1.2 There is more matter than the matter that shines — classical (mechanical) evidences	2
1.3 X-ray halos	11
1.4 Weak lensing	13
1.5 A simple subtraction	16
1.6 Timely structure formation	18
1.7 The dark matter density and velocity distribution	21
1.8 Can “dark” baryons fit the bill?	24
1.9 Gross features of a decent dark matter particle	28
1.10 Outline of the book	32
Chapter 2. The Thermal Relic Paradigm: Zeroth-Order Lessons from Cosmology	33
2.1 Praeludium	33
2.2 Thermal relics	34
2.3 Hot and cold thermal relics	36
2.4 How heavy and how light can cold relics be?	42

Chapter 3. The Thermal Relic Paradigm: A Closer Look	47
3.1 Praeludium	47
3.2 The Boltzmann equation	48
3.3 Three classic (and important) caveats to the standard story	56
3.4 Modified thermal history: a quintessential example	61
3.5 Non-thermal dark matter production and asymmetric dark matter	63
3.6 Kinetic decoupling and the smallest dark matter halos	64
3.7 Lesser known stories and miracles of SIDMs, SIMPs, ELDERs, semi-annihilation, freeze-in, and FIMPs	69
Chapter 4. The Art of WIMP Direct Detection	77
4.1 Praeludium	77
4.2 Why direct detection is a tough business	80
4.3 Direct detection event rates, for real	83
4.4 Taking it spin by spin	89
4.5 The neutrino floor	95
Chapter 5. Indirect Dark Matter Searches	99
5.1 Praeludium	99
5.2 The ingredients of indirect dark matter searches	100
5.3 Indirect detection: warm-up lap	106
5.4 Charged cosmic rays	108
5.5 The tiny neutral ones	119
5.6 Light from dark matter	124
Chapter 6. Searching for Dark Matter with Particle Colliders	131
6.1 Praeludium	131
6.2 Examples from supersymmetry and UED	133
6.3 Effective theory approach	139
6.4 Simplified models	142
6.5 Invisible Higgs decays to dark matter	144
Chapter 7. Axions and Axion-like Particles as Dark Matter	147
7.1 Praeludium	147

7.2	Axions and stars	151
7.3	Axion production	155
7.4	Axion detection	161
Chapter 8. Sterile Neutrinos as Dark Matter Particles		167
8.1	Praeludium	167
8.2	Sterile neutrino dark matter?	169
8.3	Sterile neutrino production	171
8.4	Sterile neutrino dark matter, and how to discover it	175
Chapter 9. Bestiarium: A Short, Biased Compendium of Notable Dark Matter Particle Candidates and Models		185
9.1	Praeludium	185
9.2	Of gravitinos and other depressing dark matter candidates	186
9.3	Superheavy dark matter: WIMPzillas!	195
9.4	Self-interacting dark matter (SIDM)	201
9.5	Asymmetric dark matter	206
9.6	What does “minimality” mean, and how does it look like?	210
Appendix A. Rudimentary Particle Physics		223
A.1	The magic world of natural units	223
A.2	Cross sections and decay widths	225
A.3	Effective theories in a nutshell	227
A.4	A succinct primer on neutralino dark matter	232
A.5	A succinct primer on (minimal) universal extra dimension’s (UED) Kaluza–Klein dark matter	237
Appendix B. Rudimentary Cosmology		241
B.1	Friedman–Robertson–Walker cosmology	241
B.2	Thermodynamics of the early universe	244
B.3	Thermal decoupling	248
<i>Bibliography</i>		251
<i>Index</i>		267
