## Volume 1: Applications

---

<b>1</b>	<b>Introduction</b>	
	<i>(B. Cornils, W.A. Herrmann)</i>	1
	Introduction	3
	Historical Glossary	16
<b>2</b>	<b>Applied Homogeneous Catalysis</b>	29
<b>2.1</b>	<b>Carbon Monoxide and Synthesis Gas Chemistry</b>	31
2.1.1	Hydroformylation (Oxo Synthesis, Roelen Reaction) <i>(C. D. Frohning, C. W. Kohlpaintner, H.-W. Bohnen)</i>	31
2.1.1.1	Introduction	31
2.1.1.2	Fundamental Principles	34
2.1.1.3	Kinetics, Mechanism, and Process Parameters	45
2.1.1.4	Commercial Applications	61
2.1.1.5	Recent Developments	85
2.1.2	Carbonylations	104
2.1.2.1	Synthesis of Acetic Acid and Acetic Acid Anhydride from Methanol <i>(P. Torrence)</i>	104
2.1.2.2	Synthesis of Propionic and Other Acids <i>(A. Höhn)</i>	136
2.1.2.3	Carbonylation of Benzyl-X and Aryl-X Compounds <i>(M. Beller)</i>	145
2.1.2.4	Amidocarbonylation <i>(J. F. Knifton)</i>	156
2.1.2.5	Oxidative Carbonylation <i>(A. Klausener, J.-D. Jentsch)</i>	164
2.1.2.6	Other Carbonylations <i>(M. Beller, A. M. Tafesh)</i>	182
<b>2.2</b>	<b>Hydrogenation</b> <i>(H. Brunner)</i>	195
2.2.1	Homogeneous Hydrogenation	195
2.2.1.1	The Hydrogen Molecule	195
2.2.1.2	Classical Transition Metal Hydrides	195
2.2.1.3	Nonclassical Dihydrogen Complexes	196
2.2.1.4	Homogeneous Hydrogenation of Organic Substrates	198
2.2.1.5	Enantioselective Hydrogenation of Prochiral Substrates	200

2.2.1.6	Isolated Catalysts Versus in-situ Catalysts . . . . .	203
2.2.1.7	Transfer Hydrogenation . . . . .	204
2.2.1.8	Hydrogenolysis . . . . .	204
2.2.1.9	Mechanisms . . . . .	205
2.2.1.10	Industrial Applications . . . . .	209
2.2.2	Commercial Enantioselective Hydrogenation . . . . .	210
<b>2.3</b>	<b>Reactions of Unsaturated Compounds . . . . .</b>	<b>213</b>
2.3.1	Polymerization, Oligomerization, and Copolymerization of Olefins . . . . .	213
2.3.1.1	Chemical Background ( <i>W. Kaminsky, M. Arndt-Rosenau</i> ) . . . . .	213
2.3.1.2	Chemical Engineering and Applications ( <i>L. L. Böhm</i> ) . . . . .	230
2.3.1.3	Oligomerization of Ethylene to Higher Linear $\alpha$ -Olefins ( <i>D. Vogt</i> ) . . . . .	240
2.3.1.4	Dimerization and Codimerization ( <i>H. Olivier-Bourbigou, L. Saussine</i> ) . . . . .	253
2.3.1.5	Evolution of the Synthesis of Group 4 Metallocene Catalyst Components Toward Industrial Production ( <i>C. Fritze, P. Müller, L. Resconi</i> ) . . . . .	265
2.3.2	Reactions of Other Unsaturated Compounds . . . . .	274
2.3.2.1	Reactions of Alkynes ( <i>J. Henkelmann, J.-D. Arndt, R. Kessinger</i> ) . . . . .	274
2.3.2.2	Stereospecific Polymerization of Butadiene or Isoprene ( <i>R. Taube, G. Sylvester</i> ) . . . . .	285
2.3.2.3	A Clean Route to Methacrylates via Carbonylation of Alkynes ( <i>E. Drent, W. W. Jager, J. J. Keijsper, F. G. M. Niele</i> ) . . . . .	316
2.3.3	Metathesis ( <i>J. C. Mol</i> ) . . . . .	328
2.3.3.1	Introduction . . . . .	328
2.3.3.2	Scope of the Reaction . . . . .	329
2.3.3.3	Reaction Mechanism and Catalysts in General . . . . .	333
2.3.3.4	Homogeneous Catalyst Systems . . . . .	335
2.3.3.5	Industrial Applications . . . . .	339
2.3.3.6	Conclusions . . . . .	341
2.3.4	The Alternating Copolymerization of Alkenes and Carbon Monoxide ( <i>E. Drent, J. A. M. van Broekhoven, P. H. M. Budzelaar</i> ) . . . . .	344
2.3.4.1	Introduction . . . . .	344
2.3.4.2	History of Polyketones . . . . .	344
2.3.4.3	Copolymerization of Ethylene and CO . . . . .	346
2.3.4.4	Scope of Olefin/CO Copolymerization . . . . .	356
2.3.4.5	Conclusions . . . . .	358

2.3.5	Telomerization (Hydrodimerization) of Olefins ( <i>N. Yoshimura</i> ) . . . . .	361
2.3.5.1	Introduction . . . . .	361
2.3.5.2	Development of Technologies . . . . .	362
2.3.5.3	Process for the Manufacture of 1-Octanol . . . . .	366
2.3.5.4	Development and Scope . . . . .	366
2.3.6	Cyclooligomerizations and Cyclo-co-oligomerizations of 1,3-Dienes ( <i>G. Wilke, A. Eckerle</i> ) . . . . .	368
2.3.6.1	Introduction . . . . .	368
2.3.6.2	Cyclodimerization and Cyclootrimerization of Butadiene and Substituted 1,3-Dienes . . . . .	370
2.3.6.3	Cyclo-co-oligomerization of 1,3-Dienes with Olefins and Alkynes . . . . .	374
2.3.6.4	Mechanistic Considerations . . . . .	377
2.3.6.5	Summary . . . . .	379
2.3.7	Catalyzed Polymerisation of Epoxy Resins ( <i>M. Döring</i> ) . . . . .	383
<b>2.4</b>	<b>Oxidations</b> . . . . .	<b>386</b>
2.4.1	Oxidation of Olefins to Carbonyl Compounds (Wacker Process) ( <i>R. Jira</i> ) . . . . .	386
2.4.1.1	Historical and Economic Background . . . . .	386
2.4.1.2	Chemical Background . . . . .	386
2.4.1.3	Kinetics and Mechanism . . . . .	389
2.4.1.4	Technical Applications (Wacker–Hoechst-Processes) . . . . .	397
2.4.1.5	Application of the Olefin Oxidation to Organic Syntheses . . . . .	402
2.4.2	Homogeneous Oxidative Acetoxylation of Alkenes ( <i>I. I. Moiseev, M. N. Vargaftik</i> ) . . . . .	406
2.4.2.1	Introduction . . . . .	406
2.4.2.2	Mechanistic Considerations . . . . .	407
2.4.2.3	Giant Cluster Catalyzed Reaction . . . . .	409
2.4.3	Synthesis of Oxiranes ( <i>R. A. Sheldon</i> ) . . . . .	412
2.4.3.1	Historical Development . . . . .	412
2.4.3.2	Metal-Catalyzed Epoxidation with Alkyl Hydroperoxides: Kinetics and Mechanism . . . . .	413
2.4.3.3	Commercial Oxirane Processes . . . . .	417
2.4.3.4	Scope and Applications in Organic Synthesis . . . . .	419
2.4.3.5	Recent Developments and Future Prospects . . . . .	421
2.4.4	Aliphatic Carboxylic Acids via Aliphatic Aldehydes ( <i>F. Koch</i> ) . . . . .	427
2.4.4.1	General . . . . .	427
2.4.4.2	Catalysts . . . . .	428
2.4.4.3	Kinetics and Mechanism . . . . .	429
2.4.4.4	Technical Process . . . . .	430
2.4.4.5	Future Trends . . . . .	431

2.4.5	Oxidation of Arenes and Alkyl-Substituted Aromatic Compounds . . . . .	433
2.4.5.1	Oxidation of Arenes to Quinones ( <i>R. W. Fischer</i> ) . . . . .	433
2.4.5.2	Oxidation of Alkyl-Substituted Aromatic Compounds with Air ( <i>R. W. Fischer, F. Röhrscheid</i> ) . . . . .	443
<b>2.5</b>	<b>Reactions with Hydrogen Cyanide (Hydrocyanation)</b> ( <i>S. Krill</i> ) . . . . .	468
2.5.1	Introduction and Scope . . . . .	468
2.5.2	Mechanistic Aspects of Hydrocyanation . . . . .	469
2.5.3	Hydrocyanation of Olefins . . . . .	470
2.5.3.1	Hydrocyanation of Non-Activated Monoolefins . . . . .	470
2.5.3.2	Hydrocyanation of Functionalized Olefins . . . . .	476
2.5.4	Hydrocyanation of Alkynes . . . . .	479
2.5.5	Hydrocyanation of Dienes . . . . .	481
2.5.5.1	Adiponitrile Synthesis via Hydrocyanation of Butadiene . . . . .	481
2.5.5.2	Hydrocyanation of Other Dienes . . . . .	484
2.5.6	Hydrocyanation of Aldehydes/Ketones . . . . .	485
<b>2.6</b>	<b>Hydrosilylation and Related Reactions of Silicon Compounds</b> ( <i>B. Marciniec</i> ) . . . . .	491
2.6.1	Hydrosilylation . . . . .	491
2.6.1.1	General Scope and Applications . . . . .	491
2.6.1.2	Homogeneous Catalysts . . . . .	495
2.6.1.3	Immobilized Metal Complexes as Catalysts . . . . .	500
2.6.1.4	Photo- and Peroxide-Initiated Catalysis by Metal Complexes . . . . .	501
2.6.2	Dehydrogenative Coupling Reactions . . . . .	502
2.6.2.1	Dehydrogenative Silylation of Alkenes and Alkynes with Hydrosilanes . . . . .	502
2.6.2.2	Silylative Coupling of Alkenes with Vinylsilanes . . . . .	504
2.6.2.3	Dehydrocoupling of Hydrosilanes . . . . .	505
2.6.3	Silylcarbonylation . . . . .	506
<b>2.7</b>	<b>Reaction with Nitrogen Compounds: Hydroamination</b> ( <i>R. Taube</i> ) . . . . .	513
2.7.1	Introduction . . . . .	513
2.7.2	General Mechanistic Aspects . . . . .	513
2.7.3	The Different Catalyst Systems . . . . .	516
2.7.3.1	Catalyst Systems Containing Alkali Metals . . . . .	516
2.7.3.2	Catalyst Systems Containing Lanthanides . . . . .	518

2.7.3.3	Catalyst Systems Containing Iridium . . . . .	520
2.7.3.4	Catalyst Systems Containing Iron or Ruthenium . . . . .	522
2.7.3.5	Catalyst Systems Containing Rhodium . . . . .	522
2.7.4	Perspectives . . . . .	524
<b>2.8</b>	<b>Reactions of Hydrocarbons and Other Saturated Compounds . . . . .</b>	<b>525</b>
2.8.1	Oxidations . . . . .	525
2.8.1.1	Homogeneous Catalysis in the Oxidation of Hydrocarbons to Acetic Acid ( <i>C. C. Hobbs, Jr.</i> ) . . . . .	525
2.8.1.2	Synthesis of Dimethyl Terephthalate/Terephthalic Acid and Poly(ethylene terephthalate) ( <i>D. A. Schiraldi</i> ) . . . . .	544
2.8.2	Halogenations ( <i>W. A. Herrmann, M. Stoeckl</i> ) . . . . .	552
2.8.2.1	Introduction . . . . .	552
2.8.2.2	Substitution Reactions . . . . .	552
2.8.2.3	Addition Reactions . . . . .	553
<b>2.9</b>	<b>Asymmetric Syntheses</b>	
	( <i>R. Noyori, S. Hashiguchi, T. Yamano</i> ) . . . . .	557
2.9.1	Introduction . . . . .	557
2.9.2	Preparation of Selected Structures . . . . .	557
2.9.2.1	Terpenes . . . . .	557
2.9.2.2	Carboxylic Acids . . . . .	559
2.9.2.3	Pyrethroids . . . . .	563
2.9.2.4	Prostaglandins . . . . .	565
2.9.2.5	Simple Secondary Alcohols . . . . .	565
2.9.2.6	Amino Alcohols and Related Compounds . . . . .	568
2.9.2.7	Amino Acids . . . . .	572
2.9.2.8	Alkaloids . . . . .	574
2.9.2.9	Carbapenem Antibiotics . . . . .	576
2.9.2.10	Sulfoxides . . . . .	577
2.9.2.11	1,2-Diols and Related Compounds . . . . .	578
2.9.2.12	Miscellaneous . . . . .	578
2.9.3	Conclusions . . . . .	580
<b>2.10</b>	<b>Ferrocene as a Gasoline and Fuel Additive</b>	
	( <i>W. A. Herrmann</i> ) . . . . .	586
2.10.1	Introduction . . . . .	586
2.10.2	Commercial Synthesis . . . . .	586
2.10.3	The Gasoline and Fuel Additive . . . . .	588
2.10.4	Related Antiknocking Additives . . . . .	589

<b>2.11</b>	<b>The Suzuki Cross-Coupling</b> ( <i>W. A. Herrmann</i> ) . . . . .	591
2.11.1	Introduction . . . . .	591
2.11.2	Advantages and Drawbacks . . . . .	591
2.11.3	Catalysts, Substrates, Conditions . . . . .	592
2.11.3.1	Current Status . . . . .	592
2.11.3.2	Recent Catalyst Improvements . . . . .	592
2.11.3.3	Two-Phase Catalysis . . . . .	595
2.11.3.4	Suzuki-Related Coupling . . . . .	595
2.11.4	Mechanism . . . . .	596
2.11.5	Commercial Application and Further Development . . . . .	597

## Volume 2: Developments

<b>3</b>	<b>Recent Developments in Homogeneous Catalysis</b> . . . . .	599
<b>3.1</b>	<b>Development of Methods</b> . . . . .	601
3.1.1	Homogeneous Catalysts and Their Heterogenization or Immobilization ( <i>B. Cornils, W. A. Herrmann</i> ) . . . . .	601
3.1.1.1	Immobilization by Aqueous Catalysts ( <i>B. Cornils, W. A. Herrmann</i> ) . . . . .	603
3.1.1.2	Immobilization by Other Liquids . . . . .	634
3.1.1.2.1	Fluorous Phases ( <i>I. T. Horváth</i> ) . . . . .	634
3.1.1.2.2	Non-Aqueous Ionic Liquids ( <i>V. P. W. Böhm</i> ) . . . . .	639
3.1.1.3	Immobilization ( <i>P. Panster, S. Wieland</i> ) . . . . .	646
3.1.1.4	Surface Organometallic Chemistry ( <i>J.-M. Basset, G. P. Niccolai</i> ) . . . . .	664
3.1.1.5	Ligand-Stabilized Clusters and Colloids ( <i>G. Schmid</i> ) . . . . .	677
3.1.1.6	New Generation of Re-Immobilized Catalysts ( <i>H. Bahrman</i> ) . . . . .	684
3.1.1.7	New Reactions ( <i>J. Herwig</i> ) . . . . .	694
3.1.2	Molecular Modeling in Homogeneous Catalysis ( <i>R. Schmid, W. Hieber, D. Gleich, T. Strassner</i> ) . . . . .	700
3.1.2.1	Molecular Modeling Techniques ( <i>R. Schmid</i> ) . . . . .	700
3.1.2.2	Applications . . . . .	712
3.1.2.2.1	Modeling of Homogeneous Olefin Polymerization Catalysts ( <i>R. Schmid</i> ) . . . . .	712

3.1.2.2.2	Palladium-Catalyzed C–C Coupling Reactions: The Heck Reaction ( <i>W. Hieringer</i> ) . . . . .	721
3.1.2.2.3	Hydroformylation ( <i>D. Gleich</i> ) . . . . .	727
3.1.2.2.4	C–H Activation ( <i>T. Strassner</i> ) . . . . .	737
3.1.3	High-Throughput Approaches to Homogeneous Catalysis ( <i>V. Murphy, H. W. Turner, T. Weskamp</i> ) . . . . .	740
3.1.3.1	Introduction . . . . .	740
3.1.3.2	Principal Workflow . . . . .	741
3.1.3.3	Analysis in High-Throughput Format . . . . .	745
3.1.3.4	Data Management and Software . . . . .	746
3.1.3.5	Discovery Screening Workflow for New Polyolefin Catalysts . . . . .	747
3.1.4	Chemical Reaction Engineering Aspects of Homogeneously Catalyzed Processes ( <i>M. Baerns, P. Claus</i> ) . . . . .	748
3.1.4.1	Kinetics in Homogeneous Catalysis . . . . .	750
3.1.4.2	Aspects of Catalyst Recycling . . . . .	759
3.1.5	Introduction to Selected Multicomponent and Multifunctional Catalysts ( <i>D. Hesse</i> ) . . . . .	762
3.1.5.1	Introduction . . . . .	762
3.1.5.2	Advantages in the Use of Multicomponent or Multifunctional Catalysts . . . . .	764
3.1.5.3	Problems in the Use of Multifunctional or Multicomponent Catalysts . . . . .	772
3.1.5.4	Conclusions . . . . .	773
3.1.6	Catalytic Carbon–Carbon Coupling by Palladium Complexes: Heck Reactions ( <i>W. A. Herrmann</i> ) . . . . .	775
3.1.6.1	Introduction . . . . .	775
3.1.6.2	History . . . . .	775
3.1.6.3	Definition . . . . .	776
3.1.6.4	Catalysts and Reaction Conditions . . . . .	777
3.1.6.5	Scope and Limitations . . . . .	778
3.1.6.6	Mechanism . . . . .	782
3.1.6.7	Catalyst Deactivation . . . . .	784
3.1.6.8	Industrial Applications and Perspectives . . . . .	786
3.1.7	Catalytic Cyclopropanation ( <i>A. F. Noels, A. Demonceau</i> ) . . . . .	793
3.1.7.1	Introduction . . . . .	793
3.1.7.2	Transition Metal Catalyzed Cyclopropanations . . . . .	794
3.1.7.3	Recent Developments and Applications . . . . .	798
3.1.7.4	Conclusion: In Search of New Catalysts . . . . .	805
3.1.8	The Fischer–Tropsch Synthesis – Molecular Models for Homogeneous Catalysis? ( <i>W. A. Herrmann</i> ) . . . . .	808
3.1.8.1	Introduction . . . . .	808
3.1.8.2	Historical and Economic Background . . . . .	809
3.1.8.3	Technological Features . . . . .	811

3.1.8.4	Mechanistic Considerations . . . . .	811
3.1.8.5	Assessment and Perspectives . . . . .	819
3.1.9	Arene Coupling Reactions ( <i>W. A. Herrmann</i> ) . . . . .	822
3.1.9.1	Introduction . . . . .	822
3.1.9.2	Aryl–Aryl Coupling . . . . .	823
3.1.9.3	Grignard Cross-Coupling . . . . .	824
3.1.9.4	Phenol Coupling . . . . .	826
3.1.9.5	Perspectives . . . . .	827
3.1.10	Tailoring of Catalysts: <i>N</i> -Heterocyclic Carbenes as an Example of Catalyst Design ( <i>W. A. Herrmann, K. Denk, C. W. K. Gstöttmayr</i> ) . . . . .	829
3.1.10.1	Introduction . . . . .	829
3.1.10.2	Ligand Design for <i>N</i> -Heterocyclic Carbenes (NHC) . . . . .	829
3.1.10.3	Catalytic Applications . . . . .	832
3.1.11	Micellar Catalysis ( <i>G. Oehme</i> ) . . . . .	835
3.1.11.1	Introduction . . . . .	835
3.1.11.2	Examples of Micellar-Promoted Reactions . . . . .	837
3.1.11.3	Reactions in Reverse Micelles . . . . .	839
3.1.11.4	Limits and New Developments . . . . .	840
3.1.12	Sulfur in Homogeneous Catalysis ( <i>P. Kalck, P. Serp</i> ) . . . . .	842
3.1.12.1	Introduction . . . . .	842
3.1.12.2	Sulfur in Carbonylation Reactions . . . . .	843
3.1.12.3	Sulfur in Hydrogenation, Isomerization, and Related Reactions . . . . .	845
3.1.12.4	Sulfur in Carbon–Carbon Coupling Reactions . . . . .	846
3.1.12.5	Miscellaneous Reactions . . . . .	847
3.1.12.6	Conclusions . . . . .	848
3.1.13	Homogeneous Catalysis Using Supercritical Fluids ( <i>W. Leitner</i> ) . . . . .	852
3.1.13.1	Introduction . . . . .	852
3.1.13.2	Single-Phase Catalysis Using SCFs as Solvents . . . . .	854
3.1.13.3	Multiphase Catalysis Using SCFs as Solvents . . . . .	862
3.1.13.4	Conclusions and Outlook . . . . .	867
<b>3.2</b>	<b>Special Catalysts and Processes . . . . .</b>	<b>872</b>
3.2.1	Biocatalysis and Enzyme-Analogous Processes ( <i>C. Schultz, H. Gröger, C. Dinkel, K. Drauz, H. Waldmann</i> ) . . . . .	872
3.2.1.1	Introduction . . . . .	872
3.2.1.2	Examples of Enzymatic Conversions . . . . .	873
3.2.1.3	Enzyme-Analogous Catalysts . . . . .	886
3.2.1.4	Commercial Applications . . . . .	887
3.2.1.5	Outlook . . . . .	906

3.2.2	Template or Host/Guest Relations ( <i>F. Vögtle, R. Hoss, M. Händel</i> ) . . . . .	911
3.2.2.1	Introduction . . . . .	912
3.2.2.2	Metal Cations as Templates . . . . .	913
3.2.2.3	Neutral Molecules as (Supramolecular) Templates . . . . .	914
3.2.2.4	Covalent Molecules as Templates . . . . .	922
3.2.2.5	Kinetic and Thermodynamic Template Effects . . . . .	926
3.2.2.6	Positive and Negative Templates . . . . .	928
3.2.2.7	Self-Organization . . . . .	928
3.2.2.8	Further Developments and Applications . . . . .	935
3.2.2.9	Conclusions and Outlook . . . . .	937
3.2.3	Membrane Reactors in Homogeneous Catalysis ( <i>U. Kragl, C. Dreisbach</i> ) . . . . .	941
3.2.3.1	Introduction . . . . .	941
3.2.3.2	Classification and Examples of Membrane Reactors . . . . .	942
3.2.3.3	Membrane Reactors for Homogeneously Soluble Catalysts . . . . .	947
3.2.3.4	Summary and Outlook . . . . .	950
3.2.4	Phase-Transfer Catalysis and Related Systems ( <i>Y. Goldberg, H. Alper</i> ) . . . . .	953
3.2.4.1	Introduction . . . . .	953
3.2.4.2	Homogeneous Transition-Metal Catalyzed Reactions Under Phase-Transfer Conditions . . . . .	954
3.2.4.3	Transition-Metal Containing Phase-Transfer Agents and Their Use in Synthesis . . . . .	968
3.2.4.4	Conclusions . . . . .	969
3.2.5	Rare Earth Metals in Homogeneous Catalysis ( <i>R. Anwander</i> ) . . . . .	974
3.2.5.1	Introduction . . . . .	974
3.2.5.2	Catalytic Potential . . . . .	976
3.2.5.3	Precatalysts . . . . .	977
3.2.5.4	Carbon–Carbon Bond-Forming Reactions . . . . .	978
3.2.5.5	Carbon–Heteroelement Bond-Forming Reactions . . . . .	997
3.2.5.6	Catalyst Structure . . . . .	1005
3.2.5.7	Perspectives . . . . .	1007
3.2.6	Recent Progress in Special Phosphorus-Containing Auxiliaries for Homogeneous Enantioselective Catalysis ( <i>F. Agbossou-Niedercorn</i> ) . . . . .	1014
3.2.6.1	Introduction . . . . .	1014
3.2.6.2	Monophosphines . . . . .	1015
3.2.6.3	Bi(di,bis)phosphines . . . . .	1020
3.2.6.4	Heterofunctionalized Multidentate P-Containing Chiral Auxiliaries . . . . .	1024
3.2.6.5	Immobilization and Recycling . . . . .	1025
3.2.6.6	Conclusions . . . . .	1027

**Volume 3: Developments (continued)**

---

3.2.7	Homologation ( <i>H. Bahrman</i> ) . . . . .	1034
3.2.7.1	Historical Background . . . . .	1034
3.2.7.2	Chemical Basics and Applications . . . . .	1035
3.2.7.3	Mechanism of Reaction . . . . .	1040
3.2.7.4	Technical Applications . . . . .	1042
3.2.7.5	Future Prospects . . . . .	1044
3.2.8	Homogeneous Electrocatalysis ( <i>D. Astruc</i> ) . . . . .	1046
3.2.8.1	Introduction . . . . .	1046
3.2.8.2	Electron-Transfer-Chain (ETC) Catalyzed Reactions . . . . .	1047
3.2.8.3	Atom-Transfer-Chain (ATC) Catalysis . . . . .	1055
3.2.8.4	Conclusions . . . . .	1057
3.2.9	Homogeneous Photocatalysis ( <i>A. Heumann, M. Chanon</i> ) . . . . .	1060
3.2.9.1	Definitions . . . . .	1060
3.2.9.2	Synthesis and Activation – What <i>h<math>\nu</math></i> Metal Catalysis Can Do Better? . . . . .	1065
3.2.9.3	Conclusion: What Photochemical Techniques Can Provide in Mechanistic Studies of Transition Metal Catalysis . . . . .	1074
3.2.10	Olefins from Aldehydes ( <i>W.A. Herrmann</i> ) . . . . .	1078
3.2.10.1	Introduction . . . . .	1078
3.2.10.2	The Catalytic Approach . . . . .	1079
3.2.10.3	Catalysts . . . . .	1080
3.2.10.4	Scope of Reaction, Reagents, and Side Reactions . . . . .	1081
3.2.10.5	Mechanism . . . . .	1082
3.2.10.6	Perspectives . . . . .	1085
3.2.11	Water-Gas Shift Reaction ( <i>W.A. Herrmann, M. Muehlhofer</i> ) . . . . .	1086
3.2.11.1	Introduction . . . . .	1086
3.2.11.2	Definition . . . . .	1087
3.2.11.3	Mechanism . . . . .	1087
3.2.11.4	Applications . . . . .	1089
3.2.11.5	The Arco Ethylurethane Process . . . . .	1090
3.2.11.6	Catalytic Implications and Perspectives . . . . .	1091
3.2.12	Catalytic McMurry Coupling: Olefins from Keto Compounds ( <i>W.A. Herrmann, H. Schneider</i> ) . . . . .	1093
3.2.12.1	Introduction . . . . .	1093
3.2.12.2	Stoichiometric Titanium Compounds, Other Reagents, and Mechanistic Aspects . . . . .	1094
3.2.12.3	Catalytic Deoxygenation . . . . .	1096
3.2.12.4	Perspectives . . . . .	1097

3.2.13	Catalytic Hydrogenation of Heterocyclic Sulfur and Nitrogen Compounds in Raw Oils ( <i>C. Bianchini, A. Meli, F. Vizza</i> ) . . .	1099
3.2.13.1	Introduction . . . . .	1099
3.2.13.2	Hydrogenation of Sulfur Heterocycles . . . . .	1100
3.2.13.3	Hydrogenolysis of Sulfur Heterocycles . . . . .	1106
3.2.13.4	Hydrodesulfurization in Different Phase Variation Systems . . .	1109
3.2.13.5	Hydrogenation of Nitrogen Heterocycles . . . . .	1109
3.2.13.6	Hydrogenolysis of Nitrogen Heterocycles . . . . .	1116
3.2.13.7	Perspectives . . . . .	1116
3.2.14	Double-Bond Isomerization of Olefins ( <i>W. A. Herrmann, M. Prinz</i> ) . . . . .	1119
3.2.14.1	Introduction . . . . .	1119
3.2.14.2	Catalysts, Scope, and Definition . . . . .	1120
3.2.14.3	Mechanistic Considerations . . . . .	1121
3.2.14.4	Applications . . . . .	1124
3.2.14.5	Asymmetric Isomerization . . . . .	1125
3.2.14.6	Recent Developments . . . . .	1126
3.2.14.7	Perspectives . . . . .	1128
<b>3.3</b>	<b>Special Products</b> . . . . .	<b>1131</b>
3.3.1	Enantioselective Synthesis ( <i>H.-U. Blaser, B. Pugin, F. Spindler</i> ) . . . . .	1131
3.3.1.1	Introduction and Background . . . . .	1131
3.3.1.2	Critical Factors for the Technical Application of Homogeneous Enantioselective Catalysts . . . . .	1132
3.3.1.3	State-of-the-Art and Evaluation of Catalytic Transformations .	1134
3.3.1.4	Conclusions and Prospects . . . . .	1146
3.3.2	Diols via Catalytic Dihydroxylation ( <i>M. Beller, K. B. Sharpless</i> ) . . . . .	1149
3.3.2.1	Introduction . . . . .	1149
3.3.2.2	History and General Features of Osmium-Catalyzed Dihydroxylation Reactions . . . . .	1150
3.3.2.3	Mechanism of Osmium-Catalyzed Dihydroxylations . . . . .	1152
3.3.2.4	Scope and Limitation of Asymmetric Dihydroxylation . . . .	1153
3.3.2.5	Selected Applications of Osmium-Catalyzed Dihydroxylations	1159
3.3.3	Hydrovinylation ( <i>P. W. Jolly, G. Wilke</i> ) . . . . .	1164
3.3.3.1	Introduction . . . . .	1164
3.3.3.2	The Catalyst . . . . .	1165
3.3.3.3	The Product . . . . .	1169
3.3.3.4	The Mechanism . . . . .	1178
3.3.3.5	Outlook . . . . .	1184
3.3.3.6	Postscript . . . . .	1185

3.3.4	Carbon Dioxide as a C <sub>1</sub> Building Block ( <i>E. Dinjus, R. Fornika, S. Pitter, T. Zevaco</i> ) . . . . .	1189
3.3.4.1	Introduction . . . . .	1189
3.3.4.2	Catalytic C–C Bond-Forming Reactions . . . . .	1191
3.3.4.3	Transition Metal Catalyzed Formation of Formic Acid and its Derivatives from CO <sub>2</sub> and H <sub>2</sub> . . . . .	1196
3.3.4.4	Catalyzed Formation of Organic Carbonates . . . . .	1205
3.3.4.5	Summary and Outlook . . . . .	1208
3.3.5	Reductive Carbonylation of Nitro Compounds ( <i>M. Dugal, D. Koch, G. Naberfeld, C. Six</i> ) . . . . .	1214
3.3.5.1	Introductory Remarks . . . . .	1214
3.3.5.2	Synthesis of Isocyanates . . . . .	1214
3.3.5.3	Thermodynamics, Kinetics, and Mechanism . . . . .	1218
3.3.5.4	Outlook . . . . .	1223
3.3.6	New Approaches in C–H Activation of Alkanes ( <i>A. Sen</i> ) . . . . .	1226
3.3.6.1	Introduction . . . . .	1226
3.3.6.2	Radical Pathways . . . . .	1227
3.3.6.3	Oxidative Addition Pathways . . . . .	1229
3.3.6.4	Electrophilic Pathways . . . . .	1231
3.3.6.5	Conclusions . . . . .	1238
3.3.7	Pauson–Khand Reaction ( <i>W. A. Herrmann</i> ) . . . . .	1241
3.3.7.1	Introduction . . . . .	1241
3.3.7.2	The Catalytic Option . . . . .	1242
3.3.7.3	Related Reactions . . . . .	1244
3.3.7.4	Stereoselective PKRs and <i>Hetero</i> -Reactions . . . . .	1245
3.3.7.5	Degenerate (Intermittent) and Domino PK Reactions . . . . .	1246
3.3.7.6	Substitution Effects, Selectivity, and Mechanism . . . . .	1247
3.3.7.7	Commercial Perspectives . . . . .	1249
3.3.7.8	Outlook . . . . .	1250
3.3.8	Cyclooligomerization of Alkynes ( <i>H. Bönemann, W. Brijoux</i> ) . . . . .	1252
3.3.8.1	Introduction . . . . .	1252
3.3.8.2	Survey of the Catalysts . . . . .	1253
3.3.8.3	Five- and Six-Membered Heterocycles . . . . .	1254
3.3.8.4	Six- and Eight-Membered Carbocycles . . . . .	1261
3.3.9	Chemicals from Renewable Resources ( <i>J. P. Zoller</i> ) . . . . .	1268
3.3.9.1	Introduction and General Developments . . . . .	1268
3.3.9.2	“Oleo Chemistry” . . . . .	1268
3.3.9.3	The Chemistry of Carbohydrates . . . . .	1271
3.3.9.4	The Chemistry of Starch . . . . .	1271
3.3.10	Special Reactions in Homogeneous Aqueous Systems . . . . .	1274
3.3.10.1	Synthesis of Polymers ( <i>B. M. Novak</i> ) . . . . .	1274
3.3.10.2	Homogeneous Catalysis in Living Cells ( <i>L. Vigh, F. Joó</i> ) . . . . .	1283

3.3.11	Cyclic Hydrocarbons from Diazoalkanes ( <i>W. A. Herrmann, Horst Schneider</i> ) . . . . .	1290
3.3.11.1	Introduction . . . . .	1290
3.3.11.2	Scope and Definition . . . . .	1290
3.3.11.3	Mechanistic Considerations . . . . .	1291
3.3.11.4	Catalytic Cyclization . . . . .	1292
3.3.11.5	Enantioselective Cyclization . . . . .	1295
3.3.11.6	Perspectives . . . . .	1295
3.3.12	Acrolein and Acrylonitrile from Propene ( <i>W. A. Herrmann</i> ) . . . . .	1297
3.3.12.1	Introduction . . . . .	1297
3.3.12.2	Scope and Technological Features . . . . .	1297
3.3.12.3	Catalyst Principles and Mechanism . . . . .	1298
3.3.12.4	Organometallic Models . . . . .	1300
3.3.12.5	The “Amm(on)dehydrogenation” . . . . .	1301
3.3.12.6	Perspectives . . . . .	1303
3.3.13	Chemistry of Methyltrioxorhenium (MTO) . . . . .	1304
3.3.13.1	Fine Chemicals via Methyltrioxorhenium as Catalyst ( <i>F. E. Kühn, M. Groarke</i> ) . . . . .	1304
3.3.13.2	Pilot-Plant Synthesis of MTO ( <i>W. A. Herrmann</i> ) . . . . .	1319
3.3.14	Acetoxylation and Other Palladium-Promoted or Palladium-Catalyzed Reactions ( <i>R. Jira</i> ) . . . . .	1323
3.3.14.1	Historical and Economic Background . . . . .	1323
3.3.14.2	Chemical Background . . . . .	1323
3.3.14.3	Kinetics and Mechanism . . . . .	1325
3.3.14.4	Commercial Processes . . . . .	1329
3.3.14.5	Transvinylolation . . . . .	1331
3.3.14.6	Acetoxylation in Organic Synthesis . . . . .	1332
3.3.14.7	Other Palladium-Promoted or Palladium-Catalyzed Reactions . . . . .	1333
3.3.14.8	Conclusions . . . . .	1336
<b>4</b>	<b>Epilogue</b> . . . . .	1341
<b>4.1</b>	<b>Homogeneous Catalysis – <i>Quo vadis?</i></b> ( <i>W. A. Herrmann, B. Cornils</i> ) . . . . .	1343
4.1.1	Immobilization of Homogeneous Catalysts . . . . .	1345
4.1.2	Colloidal Organometallic Catalysts . . . . .	1347
4.1.3	Multicomponent and Multifunctional Catalysis . . . . .	1347
4.1.4	Stereoselective Catalysis . . . . .	1348
4.1.5	Metals from Stoichiometric Reactivity to Catalytic Efficiency . . . . .	1351

4.1.6	Mechanistic Knowledge and Theory – Keys to Catalyst Design . . . . .	1352
4.1.7	Catalyst Performance/New Techniques to Generate and Activate Catalysts . . . . .	1353
4.1.8	Organometallic Electrocatalysis and Biomimetic Catalysis . . .	1354
4.1.9	New Chemical Feedstocks for Homogeneous Catalysis and Renewable Resources . . . . .	1356
4.1.10	Catalysis under Supercritical Conditions and Supported by Ionic Liquids . . . . .	1362
4.1.11	New Reactions, Improved Catalysts . . . . .	1365
4.1.12	A New Generation of Catalyst Ligands . . . . .	1368
4.1.13	Rare Earth Catalysts . . . . .	1369
4.1.14	Organometallic Catalysts for Polymers . . . . .	1371
4.1.15	Catalyst Reactivation, Process, and Reactor Technology . . .	1375
4.1.16	Final Closure . . . . .	1375
<b>Index</b>	. . . . .	<b>1383</b>
