

Contents

	List of Contributors	<i>xiii</i>
	Preface	<i>xvii</i>
1	Extracellular Matrix Structure and Stem Cell Mechanosensing	1
	<i>Nicholas D. Evans and Camelia G. Tusan</i>	
1.1	Mechanobiology	1
1.2	Stem Cells	3
1.3	Substrate Stiffness in Cell Behavior	5
1.3.1	A Historical Perspective on Stiffness Sensing	5
1.4	Stem Cells and Substrate Stiffness	7
1.4.1	ESCs and Substrate Stiffness	8
1.4.2	Collective Cell Behavior in Substrate Stiffness Sensing	11
1.5	Material Structure and Future Perspectives in Stem Cell Mechanobiology	14
1.6	Conclusion	15
	References	16
2	Molecular Pathways of Mechanotransduction: From Extracellular Matrix to Nucleus	23
	<i>Hamish T. J. Gilbert and Joe Swift</i>	
2.1	Introduction: Mechanically Influenced Cellular Behavior	23
2.2	Mechanosensitive Molecular Mechanisms	24
2.2.1	Continuous Mechanical Linkages from Outside the Cell to the Nucleus	24
2.2.2	Force-Mediated Matrix Remodeling	25
2.2.3	Force-Sensitive Protein Unfolding in the Cytoskeleton and FA Complexes	26
2.2.4	Nuclear Remodeling: Lamins and Chromatin	27
2.2.5	Force-Sensitive Ion Channels	27
2.2.6	Transcription Factor Translocation	28
2.2.7	Why Have Parallel Force-Sensing Mechanisms? The Need for Complexity in Biological Systems	28
2.3	Methods Enabling the Study of Mechanobiology	29
2.3.1	Culturing Monolayers of Cells in Two Dimensions	29
2.3.2	Three-Dimensional Culture Systems	31
2.3.3	Models of Dynamic Tissue	31

2.3.4 Microscopy in the Quantification of Mechanical Properties 32
2.3.5 -Omics Science 32
2.4 Conclusion 34
Acknowledgements 34
References 34

3 Sugar-Coating the Cell: The Role of the Glycocalyx in Mechanobiology 43

Stefania Marcotti and Gwendolen C. Reilly

3.1 What is the Glycocalyx? 43
3.2 Composition of the Glycocalyx 44
3.3 Morphology of the Glycocalyx 45
3.4 Mechanical Properties of the Glycocalyx 46
3.5 Mechanobiology of the Endothelial Glycocalyx 49
3.6 Does the Glycocalyx Play a Mechanobiological Role in Bone? 50
3.7 Glycocalyx in Muscle 52
3.8 How Can the Glycocalyx be Exploited for Medical Benefit? 53
3.9 Conclusion 53
References 54

**4 The Role of the Primary Cilium in Cellular Mechanotransduction:
An Emerging Therapeutic Target 61**

Kian F. Eichholz and David A. Hoey

4.1 Introduction 61
4.2 The Primary Cilium 63
4.2.1 Primary Cilium Mechanobiology 63
4.2.2 Primary Cilium Structure 64
4.2.3 Primary Cilium Mechanics 65
4.2.4 Primary Cilium-Mediated Mechanotransduction 68
4.3 Cilia-Targeted Therapeutic Strategies 68
4.3.1 Targeting Ciliary Structure and Mechanics 68
4.3.2 Targeting the Molecular Mechanism of Cilia-Mediated
Mechanotransduction 69
4.4 Conclusion 70
Acknowledgements 70
References 70

**5 Mechanosensory and Chemosensory Primary Cilia in Ciliopathy
and Ciliotherapy 75**

Surya M. Nauli, Rinzhin T. Sherpa, Caretta J. Reese, and Andromeda M. Nauli

5.1 Introduction 75
5.2 Mechanobiology and Diseases 76
5.3 Primary Cilia as Biomechanics 78
5.4 Modulating Mechanobiology Pathways 83
5.4.1 Potential Intervention for Ciliotherapy 83
5.4.2 Potential Mechanotherapy 84
5.5 Conclusion 85
References 86

6	Mechanobiology of Embryonic Skeletal Development: Lessons for Osteoarthritis	101
	<i>Andrea S. Pollard and Andrew A. Pitsillides</i>	
6.1	Introduction	101
6.2	An Overview of Embryonic Skeletal Development	102
6.3	Regulation of Joint Formation	103
6.4	Regulation of Endochondral Ossification	105
6.5	An Overview of Relevant Osteoarthritic Joint Changes	106
6.6	Lessons for Osteoarthritis from Joint Formation	108
6.7	Lessons for Osteoarthritis from Endochondral Ossification	109
6.8	Conclusion	110
	Acknowledgements	111

9	Pulmonary Vascular Mechanics in Pulmonary Hypertension	143
	<i>Zhijie Wang, Lian Tian, and Naomi C. Chesler</i>	
9.1	Introduction	143
9.2	Pulmonary Vascular Mechanics	143
9.2.1	Anatomical and Structural Character of Pulmonary Vessels	143
9.2.2	Mechanical Properties of PAs	144
9.2.3	How Diseases Alter the Biomechanics of Pulmonary Arteries	146
9.3	Measurements of Pulmonary Arterial Mechanics	147
9.3.1	Measurement at the Single Artery Level	147
9.3.2	Measurement of the Mechanical Properties of the Whole Pulmonary Vasculature	148
9.4	Mechanobiology in Pulmonary Hypertension	150
9.5	Computational Modeling in Pulmonary Circulation	151
9.6	Impact of Pulmonary Arterial Biomechanics on the Right Heart	152
9.7	Conclusion	153
	References	153
10	Mechanobiology and the Kidney Glomerulus	161
	<i>Franziska Lausecker, Christoph Ballestrem, and Rachel Lennon</i>	
10.1	Introduction	161
10.2	Glomerular Filtration Barrier	161
10.3	Podocyte Adhesion	163
10.4	Glomerular Disease	165
10.5	Forces in the Glomerulus	166
10.6	Mechanosensitive Components and Prospects for Therapy	167
10.7	Conclusion	169
	References	169
11	Dynamic Remodeling of the Heart and Blood Vessels: Implications of Health and Disease	175
	<i>Ken Takahashi, Hulin Piao, and Keiji Naruse</i>	
11.1	Introduction	175
