

Contents

| | |
|---|-----------|
| <i>Note to the Reader</i> | x |
| 1. Kinetic Theory | I |
| 1-1 Historical Sketch | I |
| 1-2 The Krönig–Clausius Model | 2 |
| 1-3 The Maxwell Distribution | 4 |
| 1-4 The Boltzmann Equation | 6 |
| 1-5 Boltzmann’s H Theorem, Entropy, and Information | 11 |
| 1-6 The Maxwell–Boltzmann Distribution | 14 |
| 1-7 Time Reversal, Poincaré Cycles, and the Paradoxes of Loschmidt and Zermelo | 16 |
| 1-8 Validity of the Boltzmann Equation | 20 |
| 1-9 The Kac Ring Model and the Stosszahlansatz | 23 |
| 1-10 Concluding Remarks | 27 |
| PROBLEMS | 28 |
| 2. Thermodynamics | 32 |
| 2-1 Introduction | 32 |
| 2-2 Empirical Temperature and the Zeroth Law | 33 |
| 2-3 The First Law | 35 |
| 2-4 Carnot Cycles and the Second Law | 37 |
| 2-5 Thermodynamic Potentials | 45 |
| 2-6 The Ideal Gas and Some Thermodynamic Relations | 47 |
| PROBLEMS | 52 |
| 3. The Gibbs Ensembles and the Thermodynamic Limit | 54 |
| 3-1 Introduction | 54 |
| 3-2 The Gibbs Microcanonical Ensemble | 56 |

| | | |
|-----------|--|------------|
| 3-3 | Temperature and the Canonical Ensemble | 57 |
| 3-4 | The Canonical Distribution and the Laws of Thermodynamics | 60 |
| 3-5 | The Grand-canonical Distribution | 65 |
| 3-6 | Existence of the Thermodynamic Limit | 67 |
| 3-7 | Convexity and Thermodynamic Stability | 72 |
| | PROBLEMS | 75 |
| 4. | Phase Transitions and Critical Points | 78 |
| 4-1 | Introduction | 78 |
| 4-2 | The One-dimensional Tonks and Takahashi Gases | 81 |
| 4-3 | The Yang–Lee Characterization of a Phase Transition | 85 |
| 4-4 | The Classical van der Waals Theory of Gas–Liquid Transitions | 88 |
| 4-5 | The Classical Curie–Weiss Theory of Magnetic Transitions | 95 |
| 4-6 | Critical-point Exponents | 105 |
| 4-7 | Critical-exponent Inequalities | 109 |
| | PROBLEMS | 113 |
| 5. | The Ising Model: Algebraic Approach | 116 |
| 5-1 | History and Formulation | 116 |
| 5-2 | Lattice Gas and Binary Alloy | 121 |
| 5-3 | One-dimensional Model and Transfer Matrix | 124 |
| 5-4 | Transfer Matrix for the Two- and Higher-dimensional Models | 127 |
| 5-5 | The Onsager Solution of the Two-dimensional Model | 131 |
| 5-6 | Correlation Functions, Eigenvalue Degeneracy, and Long-range Order | 136 |
| | PROBLEMS | 142 |
| 6. | The Ising Model: Combinatorial Approach | 145 |
| 6-1 | Formulation | 145 |
| 6-2 | Low-temperature Expansions and Lattice Duality in Two Dimensions | 150 |
| 6-3 | Dimer Solution of the Ising Model in Two Dimensions | 154 |
| 6-4 | Correlation Functions and Susceptibility | 159 |
| 6-5 | Numerical Analysis of the Three-dimensional Ising Model | 162 |
| | PROBLEMS | 176 |

| | |
|---|------------|
| <i>Contents</i> | ix |
| 7. Some Applications of the Ising Model to Biology | 177 |
| 7-1 Introduction | 177 |
| 7-2 Myoglobin and Classical Enzymes | 179 |
| 7-3 Hemoglobin | 182 |
| 7-4 Monod–Wyman–Changeux Model for Hemoglobin and Allosteric Enzymes | 187 |
| 7-5 Decorated Ising Models for Allosteric Enzymes | 190 |
| 7-6 Ising Models for DNA | 197 |
| PROBLEMS | 206 |
| | |
| Appendixes | |
| A Measure-theoretic Statement of Liouville’s Theorem | 211 |
| B Ergodic Theory and the Microcanonical Ensemble | 214 |
| C Lebowitz–Penrose Theorem for Magnetic Systems | 218 |
| D Algebraic Derivation of the Partition Function for a Two-dimensional Ising Model | 229 |
| E Combinatorial Solution of the Dimer and Ising Problems in Two Dimensions | 244 |
| | |
| Bibliography | 263 |
| | |
| Index | 275 |
