

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Organization	3
1.3	What This Course is Not!	4
2	The Standard Formulations of Classical and Quantum Mechanics	7
2.1	Classical Mechanics	7
2.1.1	The Lagrangian Formulation	7
2.1.2	The Hamiltonian Formulation	10
2.1.3	The Algebra of Classical Observables	21
2.2	Probabilities	23
2.2.1	The Frequentist Point of View	23
2.2.2	The Bayesian Point of View	24
2.2.3	Conditional Probabilities	24
2.3	Quantum Mechanics: The “Canonical Formulation”	25
2.3.1	Principles	26
2.3.2	Representations of Quantum Mechanics	30
2.3.3	Quantum Statistics and the Density Matrix	32
2.4	Path and Functional Integrals Formulations	39
2.4.1	Path Integrals	39
2.4.2	Field Theories, Functional Integrals	41
2.5	Quantum Probabilities and Reversibility	42
2.5.1	Is Quantum Mechanics Reversible or Irreversible?	42
2.5.2	Reversibility of Quantum Probabilities	43
2.5.3	Causal Reversibility	46
3	The Algebraic Quantum Formalism	47
3.1	Introduction	47
3.1.1	Observables as Operators	47
3.1.2	Operator Algebras	48
3.1.3	The Algebraic Approach	50

3.2	The Algebra of Observables	51
3.2.1	The Mathematical Principles	51
3.2.2	Physical Discussion	53
3.2.3	Physical Observables and Pure States	54
3.3	The C^* -Algebra of Observables	55
3.3.1	The Norm on Observables, \mathcal{A} is a Banach Algebra	56
3.3.2	The Observables form a Real C^* -Algebra	56
3.3.3	Spectrum of Observables and Results of Measurements	57
3.3.4	Complex C^* -Algebras	58
3.4	The GNS Construction, Operators and Hilbert Spaces	59
3.4.1	Finite Dimensional Algebra of Observables	60
3.4.2	Infinite Dimensional Real Algebra of Observables	61
3.4.3	The Complex Case, the GNS Construction	62
3.5	Why Complex Algebras?	64
3.5.1	Dynamics	64
3.5.2	Locality and Separability	64
3.5.3	Quaternionic Hilbert Spaces	66
3.6	Superselection Sectors	66
3.6.1	Definition	66
3.6.2	A Simple Example: The Particle on a Circle	66
3.6.3	General Discussion	67
3.7	von Neumann Algebras	68
3.7.1	Definitions	69
3.7.2	Classification of Factors	70
3.7.3	The Tomita-Takesaki Theory	70
3.8	Locality and Algebraic Quantum Field Theory	71
3.8.1	Algebraic Quantum Field Theory in a Dash	71
3.8.2	Axiomatic QFT	75
3.9	Discussion	76
4	The Quantum Logic Formalism	77
4.1	Introduction	77
4.1.1	Why an Algebraic Structure?	77
4.1.2	Measurements as “Logical Propositions”	78
4.1.3	The Quantum Logic Approach	81
4.2	A Presentation of the Principles	82
4.2.1	Projective Measurements as Propositions	82
4.2.2	Causality, POSET’s and the Lattice of Propositions	82
4.2.3	Reversibility and Orthocomplementation	85
4.2.4	Subsystems of Propositions and Orthomodularity	88
4.2.5	Pure States and AC Properties	90
4.3	The Geometry of Orthomodular AC Lattices	92
4.3.1	Prelude: The Fundamental Theorem of Projective Geometry,	92
4.3.2	The Projective Geometry of Orthomodular AC Lattices	94
4.3.3	Towards Hilbert Spaces	95

4.4	Gleason's Theorem and the Born Rule.....	97
4.4.1	States and Probabilities.....	97
4.4.2	Gleason's Theorem.....	98
4.4.3	Principle of the Proof.....	99
4.4.4	The Born Rule.....	101
4.4.5	Physical Observables.....	102
4.5	Discussion.....	103
5	Information, Correlations, and More.....	105
5.1	Quantum Information Formulations.....	105
5.2	Quantum Correlations.....	108
5.2.1	Entropic Inequalities.....	109
5.2.2	Bipartite Correlations.....	112
5.3	Hidden Variables, Contextuality and Local Realism.....	116
5.3.1	Hidden Variables and "Elements of Reality".....	116
5.3.2	Context-Free Hidden Variables.....	117
5.3.3	Gleason's Theorem and Contextuality.....	118
5.3.4	The Kochen-Specker Theorem.....	121
5.3.5	The Bell-CHSH Inequalities and Local Realism.....	122
5.3.6	Contextual Models.....	125
5.4	Summary Discussion on Quantum Correlations.....	132
5.4.1	Locality and Realism.....	133
5.4.2	Chance and Correlations.....	134
5.5	Measurements.....	135
5.5.1	What are the Questions?.....	135
5.5.2	The von Neumann Paradigm.....	136
5.5.3	Decoherence, Ergodicity and Mixing.....	138
5.5.4	Discussion.....	142
5.6	Formalisms, Interpretations and Alternatives to Quantum Mechanics.....	143
5.6.1	What About Interpretations?.....	143
5.6.2	Formalisms.....	144
5.6.3	Interpretations.....	144
5.6.4	Alternatives.....	146
5.7	What About Gravity?.....	147
	Bibliography.....	149
	Index.....	155
