Preface	xv
List of contributors	xix
List of abbreviations	xxiii
List of figures	xxxii
List of tables	xxxv
List of colour plates	xxxvii
1 Introduction: basic requirements for <i>in vitro</i> applications in aquatic ecotoxicology (C. Mothersill and B. Austin)	1
1.1 References	5
PART I CULTURE TECHNIQUES	7
2 Basic methods and media for eukaryotic cells <i>in vitro</i> (B. Austin and C. Mothersill)	9
2.1 Animals	10
2.2 Equipment	10
2.3 Procedures	11
2.4 Culture media	15
2.5 Conclusions	16
2.6 References	16

3	Development of primary tissue culture techniques for use in ecotoxicology: some considerations necessary prior to model selection (C. Mothersill and C. Seymour).	17
3.1	Overview.	17
3.2	Introduction	18
3.2.1	Problems with <i>in vitro</i> approaches and background philosophies.	18
3.2.2	Historical perspectives	20
3.3	Methodology	21
3.4	Cell population-based <i>in vitro</i> approaches to normal tissue toxicology	23
3.5	Validation of data from primary epithelial culture systems	28
3.6	Conclusions	29
3.7	References	29
4	Cultured epithelia from fish gills (P. Pärt and C.M. Wood).	35
4.1	Introduction	35
4.2	Gill cells in monolayer cultures	36
4.3	Cultured gill epithelia	37
4.3.1	The experimental system	37
4.3.2	Preparation of epithelia	38
4.3.3	Development of epithelial properties.	41
4.3.4	Exposure to freshwater	42
4.3.5	Hormonal effects on cultured gill epithelia.	45
4.3.6	The cultured epithelium in aquatic toxicology.	46
4.3.7	<i>In vitro</i> screening and testing of chemicals	48
4.4	Concluding remarks	48
4.5	References	49
PART II END POINT AND TOOLS FOR <i>IN VITRO</i> TOXICOLOGY		53
5	Applications of <i>in vitro</i> techniques in studies of biomarkers and ecotoxicology (D. Sheehan)	55
5.1	Introduction	55
5.1.1	Chemical threat posed by xenobiotics	55
5.1.2	Biological xenobiotic defence mechanisms	56
5.1.3	Enzymatic detoxification.	57
5.2	Detoxification systems of invertebrates and aquatic vertebrates as bioindicators of environmental pollution	60
5.2.1	Sentinel species.	60
5.2.2	Potential of invertebrate species for <i>in vitro</i> toxicology.	61
5.3	Primary cell cultures	61
5.4	Uses of cell lines in toxicology	65
5.4.1	Cytotoxicity.	65

5.4.2	Ultrastructural effects	66
5.4.3	Formation of protein adducts	66
5.4.4	Genotoxicity	67
5.5	Non-mammalian tissue culture.	68
5.6	Potential of lower vertebrate and invertebrate tissue culture in toxicology	69
5.7	Future perspectives	69
5.8	References	70
6	End points for <i>in vitro</i> toxicity testing with fish cells (<i>H. Segner and T. Braunbeck</i>).	77
6.1	Introduction	77
6.2	Cell systems from teleost fish	78
6.2.1	Primary cells	78
6.2.2	Permanent cell lines.	80
6.2.3	Recombinant fish cell lines	81
6.3	End points in <i>in vitro</i> assays	82
6.3.1	Molecular end points.	83
6.3.2	Morphological end points.	97
6.3.3	Cytotoxicity assays	114
6.4	Perspectives	124
6.5	References	125
7	Toxicogenomic technologies for <i>in vitro</i> aquatic toxicology (<i>L.E.J. Lee, M.M. Vijayan and B. Dixon</i>).	143
7.1	Introduction	143
7.2	Toxicogenomics	144
7.3	Genomic and transgenic technologies	144
7.3.1	Transgenic technologies	145
7.3.2	Genomic studies	148
7.4	Microarrays	149
7.4.1	Toxicant fingerprinting.	151
7.4.2	Current limitations of microarrays	151
7.5	Proteomics	152
7.5.1	Methodology	153
7.5.2	Fish proteomes.	154
7.6	Conclusions	155
7.7	References	155
8	Delayed and indirect genotoxicity: a paradigm shift in toxicology? (<i>E.G. Wright</i>).	161
8.1	Introduction	161
8.2	The biological effects of ionizing radiation.	162
8.2.1	The concept of radiation-induced genomic instability	162
8.2.2	Radiation-induced chromosomal instability	164

8.2.3	Radiation-induced delayed gene mutations.	165
8.2.4	Radiation-induced genomic instability <i>in vivo</i>	166
8.2.5	Radiation-induced instability in the germ line.	167
8.2.6	Radiation-induced genomic instability in a non-mammalian system	168
8.2.7	Mechanisms underlying inducible instability.	168
8.2.8	Instability associated with exposures other than ionizing radiation.	168
8.3	Radiation-induced bystander effects	169
8.3.1	Bystander effects associated with α -particle irradiations	170
8.3.2	Mechanisms underlying bystander effects.	171
8.3.3	Clastogenic factors: long-range acting mechanisms.	173
8.4	A link between radiation-induced genomic instability and bystander effects.	174
8.5	Conclusions.	175
8.6	References.	175

PART III SPECIFIC TOXINS AND TOXIC GROUPS 183

9	Toxicogenomic applications in environmental toxicology (<i>L.N. Moens, K. Van der Ven, M. Caturla and W.M. De Coen</i>)	185
9.1	Introduction	185
9.2	Methodological approaches for differential gene expression	187
9.2.1	Differential display (DD)	187
9.3	Restriction endonuclease-facilitated analysis of gene expression	188
9.3.1	Serial analysis of gene expression (SAGE)	188
9.4	Subtractive hybridization (SH) methods.	189
9.4.1	Traditional SH (physical separation).	189
9.4.2	Chemical crosslinking subtraction (CCLS)	189
9.4.3	Representational difference analysis (RDA)	190
9.4.4	Suppression subtractive hybridization (SSH).	190
9.4.5	DNA arrays and differential cDNA library screening.	191
9.4.6	Real-time PCR: quantitative analysis of changes in molecular targets	193
9.5	A focus on SSH, DNA arrays and real-time PCR: methods and toxicological applications	194
9.5.1	Suppression subtractive hybridization SSH.	194
9.5.2	DNA arrays	201
9.5.3	Real-time PCR.	207
9.6	Evaluation.	213
9.7	References.	215

10 Biomarkers to assess endocrine disruption of reproduction in bivalves (F. Gagné and C. Blaise)	221
10.1 Introduction	221
10.2 Hormonal regulation of reproduction	223
10.2.1 Role of estradiol-17 β in vitellogenesis	225
10.3 Biomarkers to assess endocrine effects on reproduction	225
10.3.1 Steroidogenesis and hormone metabolism	225
10.3.2 Hormone receptor studies	226
10.3.3 Assays for vitellogenin	228
10.3.4 Spawning activity	231
10.3.5 General indicators of gamete activity	232
10.3.6 Biomarkers to monitor fertilization	233
10.4 Case studies	233
10.4.1 Case study 1: masculinization of the bivalve <i>Mya arenaria</i>	233
10.4.2 Case study 2: induced feminization of freshwater mussels by a municipal effluent	234
10.5 General conclusions	235
10.6 References	236
11 Fish cells used to detect aquatic carcinogens and genotoxic agents (A. Castaño, C. Becerril and M.T. Llorente)	241
11.1 Introduction	241
11.2 <i>In vitro</i> assays for the evaluation of mutagenicity/carcinogenicity of chemicals	243
11.2.1 Advantages of <i>in vitro</i> testing using fish cells	252
11.3 Fish cells in the genetic assessment of contaminants to wild populations of aquatic organisms	257
11.3.1 <i>In vitro</i> assays in the understanding of contamination on populations	257
11.3.2 Fish cells from sentinel species used as biomarkers of exposure to contaminants	259
11.4 Concluding remarks	264
11.5 References	266
12 <i>In vitro</i> biomarkers of radiation exposure in the environment (B.A. Ulsh and D.R. Boreham)	279
12.1 Introduction	279
12.2 Chromosome aberrations	280
12.3 Cytogenetic assays	282
12.3.1 Challenges	282
12.3.2 Micronucleus assay	283
12.3.3 Dicentric analysis	284
12.3.4 Fluorescence <i>in situ</i> hybridization (FISH)	285
12.4 Using cytogenetic biomarkers for environmental biodosimetry	288
12.5 References	289

13	Ecotoxicological characterization of complex mixtures (<i>G. Repetto, A. del</i>	
	<i>Peso and A. Jos</i>)	295
13.1	Introduction	295
13.2	Alternatives in ecotoxicology	296
13.3	Principal environmental samples used for ecotoxicological	
	evaluation	300
13.4	Global ecotoxicity evaluation	302
13.5	Non-fish cell cultures	304
13.6	Fish cell cultures	309
	13.6.1 Cell and tissue morphology	309
	13.6.2 Cellular viability	310
	13.6.3 Genotoxicity	312
	13.6.4 Biotransformation and defence systems	313
	13.6.5 Endocrine disruption	314
13.7	Toxicity identification and reduction evaluation procedures	315
13.8	Conclusions and likely future trends	319
13.9	References	320
14	<i>In vitro</i> ecotoxicological assessment of aquatic sediments (<i>S. Ni</i>	
	<i>Shuilleabhain, M. Davoren, M.G.J. Hartl and J. O'Halloran</i>)	327
14.1	Introduction	327
	14.1.1 What are sediments?	328
14.2	Assessing the characteristics of aquatic sediments	329
	14.2.1 Sediment types	329
	14.2.2 The significance of sediments in ecotoxicology	330
14.3	Sediment collection, storage and preparation—general consider-	
	ations	331
	14.3.1 Control or reference sediment	332
	14.3.2 Sediment collection	332
	14.3.3 Whole sediment storage and preservation	334
	14.3.4 Health and safety	334
14.4	Sediment preparation methods	334
	14.4.1 Spiking sediments	334
	14.4.2 Aqueous extraction procedures	335
	14.4.3 Pore water extraction procedures	335
	14.4.4 Elutriate extraction procedures	343
	14.4.5 Solvent extraction	344
	14.4.6 Novel approaches to sediment extraction	346
14.5	<i>In vitro</i> tests for the toxicological assessment of sediments	347
	14.5.1 Bacterial bioassays for assessing sediment toxicity	347
	14.5.2 Bioassays with primary producers for assessing sediment	
	toxicity	349
14.6	Use of microscale tests for assessing sediment toxicity	349
	14.6.1 Submitochondrial particle (SMP) technology	352

14.7	Use of <i>in vitro</i> cell cultures in determining sediment toxicity . . .	353
14.7.1	Cytotoxicity studies	356
14.7.2	Genotoxicity studies	356
14.7.3	Mechanistic and biomarker studies	357
14.8	Conclusions	358
14.9	Perspectives and future research	359
14.10	References	360
PART IV PRACTICAL ISSUES		375
15	<i>In vitro/in vivo</i> bridging approaches—validating the relevance of <i>in vitro</i> techniques with references to the whole organism in the natural environment (M. Kilemade and B. Quinn)	377
15.1	Preface	377
15.2	Guidelines for <i>in vitro/in vivo</i> comparisons	378
15.3	Inherent advantages of <i>in vitro</i> aquatic toxicology research models	379
15.4	Inherent problems with <i>in vitro</i> responses in aquatic toxicological studies	380
15.5	Aquatic toxicology— <i>in vitro–in vivo</i> responses	381
15.6	Cell lines versus primary culture	382
15.7	Reduction and replacement of <i>in vivo</i> tests	383
15.7.1	Relative toxicity	383
15.7.2	Absolute sensitivity	384
15.8	Bridging the <i>in vivo/in vitro</i> divide	388
15.8.1	Quantitative structure–activity relationship (QSAR)	389
15.8.2	Toxicokinetic models	389
15.9	Why primary cell cultures?	390
15.10	<i>In vitro/in vivo</i> end points and responses	391
15.11	Future research	391
15.12	Conclusions	392
15.13	References	393
16	Cell culture approaches in aquatic immunotoxicology (N.C. Bols, S.J. DeWitte-Orr, J.L. Brubacher, B. Dixon and R.C. Ganassin)	399
16.1	Introduction	399
16.1.1	Defining aquatic immunotoxicology	399
16.2	Cell cultures and aquatic immunotoxicology	400
16.2.1	Primary cell cultures versus cell lines	401
16.2.2	Cell types	401
16.2.3	<i>In vivo</i> versus <i>in vitro</i> exposure	402
16.2.4	Value of <i>in vitro</i> approaches	403
16.3	Haemopoietic cell cultures	403
16.3.1	Primary long-term haemopoietic cultures (LTHCs)	403
16.3.2	Colony formation in semi-solid matrix	404

16.4	Lymphocyte cultures	404
16.4.1	Lymphocyte blastogenesis in primary cultures.	404
16.4.2	Non-specific cytotoxic cells (NCCs) and natural killer (NK) cells	406
16.4.3	Lymphocyte cell lines	407
16.5	Phagocyte cultures	407
16.5.1	Primary phagocyte cultures.	409
16.5.2	Monocyte/Macrophage cell lines	412
16.6	Conclusions.	413
16.7	References.	413
17	Validation of alternative methods to animal testing (<i>M. Halder and A. Worth</i>)	421
17.1	Introduction	421
17.1.1	What does validation mean?	422
17.1.2	Is formal validation necessary?	422
17.1.3	Validation guidelines	422
17.2	The ECVAM validation process.	423
17.2.1	Test development	424
17.2.2	Prevalidation	425
17.2.3	Validation	425
17.2.4	Independent assessment and regulatory acceptance	426
17.3	The ICCVAM test method evaluation process	427
17.3.1	Test method submission.	427
17.3.2	ICCVAM interagency working groups	427
17.3.3	Independent scientific peer review panel	429
17.3.4	ICCVAM test recommendations	429
17.3.5	Regulatory agency considerations of ICCVAM recommendations	429
17.4	Regulatory tests	429
17.4.1	Chemicals	429
17.4.2	Effluents	431
17.5	Conclusions	431
17.6	References.	431
18	Legal and ethical aspects of environmental toxicology with specific references to <i>in vitro</i> approaches (<i>C. Seymour</i>).	435
18.1	The background philosophy	435
18.2	Why do we control toxicological experimentation?	436
18.3	Is there an automatic right to life for any species, even man?	436
18.4	The Nuremberg Code and its impact on animal toxicology	437
18.5	Present day consequences of the Nuremberg Code; the anthropocentric view is made legal.	438
18.6	The anthropocentric view is evolving	438

18.7	The problem of assessment of values by one group or species on behalf of another	439
18.8	Deep ecology and the biocentric viewpoint applied to toxicology	440
18.9	Altruism toward animals in research.	441
18.10	The way forward?.	441
18.11	References.	442
19	The mathematics of cell growth in culture (<i>R. Ocone, A. Kummer and X. Yang</i>)	443
19.1	Introduction	443
19.2	What is growth in cell culture?	443
19.3	How is growth expressed?.	444
19.3.1	Kinetics	445
19.4	Significance of cell growth modelling	446
19.4.1	Formulating a mathematical model	447
19.4.2	Single-cell modelling	448
19.4.3	Modelling cell population in culture	449
19.4.4	Determination of model's parameters	451
19.5	Linking organizational levels.	452
19.5.1	Development of a regulatory thermodynamic theory	452
19.5.2	Constitutive relations.	456
19.6	Conclusions	457
19.7	References.	457
20	Conclusions (<i>B. Austin, C. Seymour and C. Mothersill</i>)	459
Index	465
